Daily Economic Briefing

Friday 6 November 2026 | Window: Wed 4 Nov 2026 20:00 ET – Thu 5 Nov 2026 20:21 ET (Thu 5 Nov close/AH, the window's one NYSE session) | Research cutoff 8:21pm ET Thu 5 Nov 2026 | Edition 58

60-second read

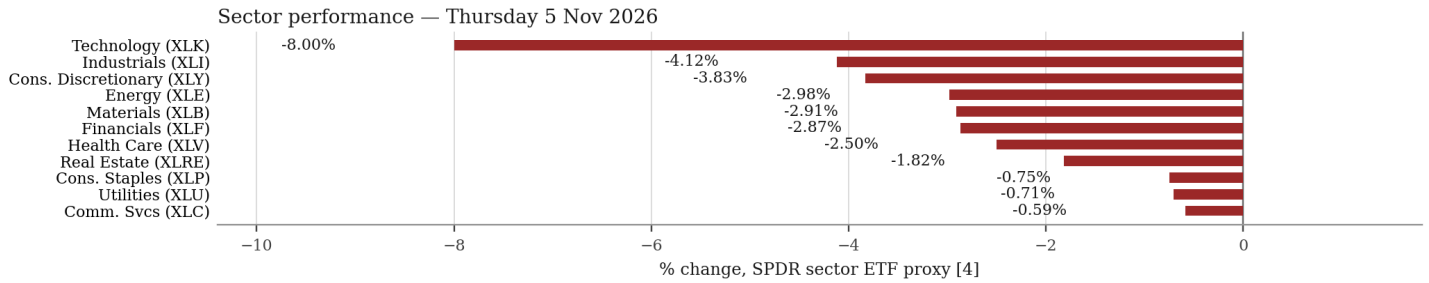

1. **An AI-capex/data-center-fear selloff fully reversed Wednesday's election rally**: S&P 500 -4.4%, Nasdaq Composite -5.5% (into correction territory, worst day since April 2025), Dow -3.4%[1]. The trigger: voters rejected local data-center ballot measures in 40 of 41 votes tied to Tuesday's midterms, and UBS flagged approx. 30% of 2028 data-center capacity additions as "at risk"[6] — semiconductors were hit hardest (Philadelphia Semiconductor Index -12%, its second-largest drop on record)[4].
2. **The VIX posted its sharpest one-day jump logged in this report's history**, +69.66% to 28.18, fully inverting Wednesday's clean contango into backwardation (VIX9D 32.66 > VIX 28.18 > VIX3M 25.55 > VIX6M 25.29) — a near-mirror-image reversal of Wednesday's record VIX decline[16].
3. **Two more central-bank surprises.** The Bank of England delivered a surprise 25bp hike to 4.00% (8-1, Catherine Mann dissenting for 50bp) — its first hike since August 2023, citing Middle East-conflict energy-price risk[7]. Banxico delivered the opposite surprise, a 25bp cut to 6.25% against a consensus hold (3-2 vote, secondary-sourced)[8].
4. **December FOMC hike odds eased sharply** to approx. 66.5% (from approx. 77-80% at edition 57) per Polymarket[9], alongside a 3-12bp pullback across the Treasury curve (2-year -12bp to 4.46%) as flight-to-quality met a softening hawkish narrative[15].
5. **A dense single-stock earnings cluster**: Qualcomm -9.49% confirmed close (superseding Wednesday's logged AH snapshot)[3], AppLovin +31.04% and Krispy Kreme +30.68% on strong beats/guides[3], Tripadvisor -27.65% on a goodwill impairment plus surprise CEO/CFO departures[3], and Veracyte/MNTN both down more than 50% on guidance cuts (magnitudes SEC-filing-confirmed but not independently corroborated)[3].

1. Market recap

S&P 500	Dow Jones	Nasdaq Comp.	Russell 2000	VIX	10Y Treasury
7,353.73	**51,523.06**	**24,315.00**	**2,729.89**	**28.18**	**4.84%**
-4.4% (-334.89)	-3.4% (-1,833.06)	-5.5% (-1,421.52)	-4.4% (-127.06)	+69.66% (+11.57)	-6bp

Thursday erased the whole of Wednesday's midterm-election rally and then some. AP's wire (confirmed byte-identical on two independent mirrors, WTOP and La Nación) and an ETF-proxy cross-check (SPY -4.41%, QQQ -6.49%, DIA -3.53%, IWM -4.59%) agree closely on the move, with a six-cent/rounding-level variance against an independent Reuters-sourced read of the S&P close (7,353.79 vs. 7,353.73) not treated as a genuine conflict[1][4]. The Nasdaq is now down 4.4% week-to-date (still up 4.6% year-to-date); Bloomberg put the session's damage at roughly $2tn of market value erased and the index about 14% off its October record[5]. The proximate trigger was a reassessment of AI-infrastructure economics: Tuesday's midterm ballots saw local data-center measures rejected in 40 of 41 votes, and UBS estimated approx. 30% of planned 2028 data-center capacity additions are now at risk of delay or cancellation under a Democratic-controlled Congress[6] — a direct reversal of the "fading risk premium" read that drove Wednesday's rally.

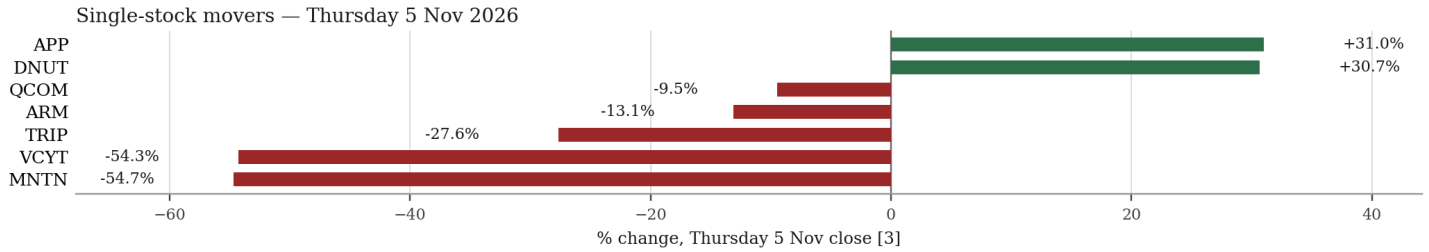

Sector performance

Zero of 11 SPDR sector ETFs closed higher — a complete reversal of Wednesday's 9-of-11 advance[2]. Technology (XLK -8.00%) was by far the laggard, nearly double the next-worst sector, as the AI-capex scare hit chip-heavy constituents directly; Industrials (-4.12%) and Consumer Discretionary (-3.83%) followed. Defensives held up best in relative terms — Communication Services (-0.59%), Utilities (-0.71%) and Consumer Staples (-0.75%) — though none were spared outright declines[2].

2. Equities and earnings

The sector story above was carried almost entirely by the semiconductor complex: Micron -17.46%, AMD -17.26%, Marvell -16.43%, Broadcom -10.43%, Intel -10.33% and Nvidia -9.26% to $181.60, with the iShares SOXX ETF down more than 12%[4]. None of these moves traces to company-specific news in the window — AMD's own strong fiscal Q3 beat was reported 3 November, before this window opened, and should not be conflated with Thursday's decline, which was macro/sector-driven[4].

Ticker	Move	Driver
MNTN	-54.68%	Q3 revenue +15% but go-to-market execution issues cited by the CFO; FY26 guide narrowed, Q4 guide implies deceleration[3].
VCYT	-54.30%	Q3 revenue +15%, but FY26 testing-revenue guidance trimmed on a Decipher Prostate volume miss[3].
TRIP	-27.65%	Q3 revenue -11% y/y, a $369.5m non-cash goodwill impairment, and same-day CEO and CFO departures disclosed in a separate 8-K[3].
ARM	-13.08%	FQ2 revenue approx. $1.44bn (+27% y/y, secondary-sourced; the 6-K exhibit itself did not surface the headline figures directly)[3].
QCOM	-9.49%	FQ4 non-GAAP EPS $2.17 vs. a $2.36 LSEG consensus; handset revenue -26% y/y on continued Apple-modem loss, partly offset by Automotive +89% y/y to a record $1.99bn; light FQ1 guide. Confirmed regular-session close, superseding the AH snapshot logged last edition[3].
DNUT	+30.68%	Raised/narrowed FY26 revenue guide to $1.35-1.40bn despite Q3 revenue -12.4% y/y (a refranchising effect)[3].
APP	+31.04%	Q3 revenue $2.185bn (+55% y/y), EPS $4.31, strong Q4 guide[3].

Veracyte's and MNTN's magnitudes are each confirmed against the company's own 8-K but could not be corroborated by a second independent outlet — included with that caveat per standard practice. A second wave of earnings landed after Thursday's close with late-session AH snapshots, not yet confirmed to hold into Friday's open: Cloudflare (+14.72%, Q3 revenue +39% to $782.5m, beat), JFrog (+21.95%, Q3 revenue +31%, raised guide) and Airbnb (+11.00%, Q3 revenue +19%, raised FY26 outlook) all rose on beats, while Atlassian (-15.98%, despite Q1 FY27 revenue +24% and an EPS beat) and Natera (-16.15%, despite revenue +34% and a raised FY26 guide) fell — another instance of this report's standing finding that a clean beat guarantees nothing about the same-session reaction[3]. A widely-circulated DraftKings AH figure (-22.24%, citing an EBITDA-guidance cut) could not be corroborated by any 8-K on EDGAR as of cutoff and is not reported; DraftKings' confirmed regular session actually closed +1.77%[3]. No independently verifiable analyst actions (upgrades/downgrades/price-target changes) were identified for the session — a circulating "biggest calls" list was spot-checked and found unsupported by any corroborating record, consistent with this report's standing fabrication-trap caution, and is omitted rather than repeated.

3. Macro, policy and rates

Central bank	Policy rate	Last change	Next decision
Federal Reserve	3.75%-4.00%	Held 28 Oct 2026 (10-2, hawkish dissent)	8-9 Dec 2026 (SEP meeting)
Bank of England	4.00%	Hiked 25bp 5 Nov 2026 (8-1, Mann for 50bp)	17 Dec 2026
Bank of Japan	approx. 1.25%	Held 29-30 Oct 2026 (8-1)	17-18 Dec 2026
European Central Bank	Deposit 2.50% / Refi 2.65%	Held 28-29 Oct 2026	Unconfirmed (est. mid-Dec)
Bank of Canada	2.50%	Hiked 25bp 28 Oct 2026	9 Dec 2026
Reserve Bank of Australia	4.85%	Hiked 25bp 3 Nov 2026 (6-3 split)	7-8 Dec 2026
Swiss National Bank	0.00%	Held 24 Sept 2026	10 Dec 2026
Norges Bank	4.50%	Held 24 Sept 2026	17 Dec 2026
Riksbank	2.00%	Hiked 25bp 4 Nov 2026	16 Dec 2026 (inferred)
Banxico	approx. 6.25%	Cut 25bp 5 Nov 2026 (3-2, secondary-sourced)	17 Dec 2026 (secondary-sourced)

Thursday delivered this report's first-ever same-day hike/cut split between two major central banks. The Bank of England raised Bank Rate 25bp to 4.00% — its first hike since August 2023 — on an 8-1 vote, with Catherine Mann dissenting in favor of a larger 50bp move; Governor Bailey explicitly tied the decision to Middle East-conflict energy-price risk pushing headline inflation (currently 3.5%) toward a forecast approx. 5% by mid-2027, while stressing the hike "shouldn't be seen as the first in an inevitable long sequence"[7]. Banxico, whose own site remained unreachable for a further edition, reportedly cut 25bp to 6.25% against a consensus hold (3-2, Deputy Governors Borja Gómez and Heath dissenting for a hold) as October inflation rose to 3.62% y/y — secondary-sourced only via consistent multi-outlet Mexican financial press[8]. December 8-9 FOMC hike odds eased to approx. 66.5% (vs. approx. 31.5% no-change) per Polymarket's Gamma API, down from approx. 77-80% hike at edition 57 — Kalshi direct (22nd consecutive failure, HTTP 429) and CME FedWatch (18th consecutive failure, timeout) both remain blocked[9]. No new Federal Register filing was found extending the 178-product Section 301 tariff-exclusion list past its 11:59pm ET 9 November 2026 lapse (standard approx. 25% rate resumes 10 Nov absent further action)[19]. US government funding remains intact through 11 December 2026 under H.R. 6500, cleanly re-confirmed this edition directly against whitehouse.gov[20]. New Mexico v. Meta's formal notice of appeal remains unconfirmed for a thirteenth consecutive edition.

4. Commodities and FX

Instrument	Level	Chg	Note
WTI crude	$91.26	+3.56%	Partial rebound off Wed's crash low; no dated news catalyst found for the bounce — treat as price-confirmed, driver-unconfirmed[10]
Brent crude	$98.29	+3.88%	Same pattern as WTI[10]

Henry Hub (NGZ6, Dec)	$2.943/MMBtu	-0.54%	Third straight clean two-source reconciliation (Yahoo NG=F $2.946, -0.44%)[10]
Gold futures	$4,095.85	+0.56%	Disagrees on direction with Kitco spot — see Annex A[10]
Gold spot (Kitco)	$4,074.60	-0.31%	See Annex A for the futures-vs-spot conflict[12]
Silver futures	$51.730	-1.06%	Agrees on direction with spot, large magnitude gap — see Annex A[10]
Silver spot (Kitco)	$51.63	-0.08%	See Annex A[12]
COMEX copper	$6.2295/lb	-3.10%	[10]
LME copper (cash)	$14,201.00/t	n/a	Thursday settlement unavailable at research time; figure shown is Wed 4 Nov, carried forward — see Annex B[13]
DXY (Yahoo)	101.61	+0.10%	Disagrees on direction with Investing.com proxy — see Annex A[11]
DXY (Investing.com proxy)	101.52	-0.05%	See Annex A[10]
EUR/USD	1.1219	-0.09%	[14]
GBP/USD	1.3451	-0.16%	[14]
USD/JPY	157.68	-0.49%	[14]
2-year Treasury	4.46%	-12bp	[15]
10-year Treasury	4.84%	-6bp	[15]
30-year Treasury	5.25%	-3bp	[15]

Oil partially unwound Wednesday's 8%+ crash without a confirmed fresh catalyst, while the Treasury curve rallied 3-12bp on the equity flight-to-quality, led by the front end as rate-hike odds eased in tandem. Gold and silver again split on direction/magnitude between futures and spot (see Annex A); the dollar's two main benchmarks disagreed on direction for a further session.

5. Derivatives, volatility and positioning

The VIX complex fully inverted: VIX +69.66% to 28.18, VIX9D +115.01% to 32.66, VIX3M +35.90% to 25.55, VIX6M +22.29% to 25.29, and VVIX +49.31% to 134.99, while SKEW eased -1.01% to 149.37[16]. All six series carried a fresh same-session `last_trade_time`, and every percentage above was independently recomputed from the raw levels (not taken on faith from the feed's own field) — no sign of either of the feed's two historical bugs this edition. The resulting term structure, VIX9D > VIX > VIX3M > VIX6M, is full backwardation: the textbook signature of an acute, fresh shock, a complete inversion of Wednesday's ascending contango. SKEW easing even as at-the-money vol spiked suggests a broad risk-off repricing rather than a concentrated tail-hedging event. No usable dealer-gamma or options-flow data could be sourced again (zerogex.io showed placeholder dashes; SpotGamma's dashboard remains a client-side app with no server-rendered data) — a standing gap. No CFTC Commitment of Traders report has posted since the one covering 27 October 2026 data; the next report, covering 3 November data, remains scheduled for Friday 6 November, 3:30pm ET, with the CFTC's planned move to twice-weekly releases (Press Release 9316-26) still carrying no confirmed start date[17]. Funding markets showed no stress on the day: the most recent published prints (dated 4 Nov, one-day publication lag) had SOFR at 3.94%, EFFR and OBFR both at 3.88%, all close to the 3.90% IORB — a Thursday print was not yet available within this window[18].

6. The day ahead

Date	Event	Consensus / context
Fri 6 Nov 2026, 8:30am ET	October 2026 US nonfarm payrolls	Consensus not found despite repeated attempts (recurring gap); September printed +29k vs. approx. 84-90k consensus
Fri 6 Nov 2026, 3:30pm ET	CFTC Commitment of Traders (covering 3 Nov data)	Next ES/NQ/RTY positioning read; twice-weekly schedule change still has no confirmed start date
Sun 9 Nov 2026, 11:59pm ET	Section 301 exclusion lapse, 178 Chinese products	Standard approx. 25% rate resumes 10 Nov absent a further USTR extension
Tue 10 Nov 2026	Riksbank minutes (4 Nov hike)	May disclose the undisclosed vote split
Wed 11 Nov 2026	Veterans Day	Equities trade a full session; bond market closed (confirmed)
Sat 14 Nov 2026 (approx.)	Q3 2026 13F filing deadline	Natural lead item for the Monday 16 Nov edition
8-9 Dec 2026	FOMC meeting (SEP)	Hike odds approx. 66.5% per Polymarket, down from approx. 77-80%
16-17 Dec 2026	Riksbank, BoE, Norges Bank, SNB, BoC next decisions cluster	A dense mid-December central-bank calendar

Sector setup we take into Friday's session

- Technology/semis are deeply oversold after an -8.00% sector day and 9-17% single-name declines (Micron, AMD, Marvell, Broadcom, Intel, Nvidia) — watch for a stabilization bounce versus a second leg down depending on Friday's jobs report and any follow-through AI-capex commentary.
- The VIX complex sits in full backwardation (28.18/32.66/25.55/25.29) — this shape typically unwinds quickly once the acute shock passes; watch for renormalization into contango.
- Oil's rebound (WTI +3.56%, Brent +3.88%) leaves both grades well below pre-crash levels; Mideast headline risk remains two-sided and the BoE's own hike decision cited it as a live inflation driver.
- Rates: a 3-12bp Treasury rally and eased Dec FOMC hike odds (approx. 66.5%) could extend further on a weak October jobs print Friday.
- Two fresh central-bank surprises (BoE hike, Banxico cut) underscore how unsettled the global rate-path consensus remains heading into the Dec 8-9/16-17 decision cluster.

Annex A — Assumptions, corrections and status

- Qualcomm's AH snapshot logged last edition (-7.52%) is superseded by Thursday's confirmed regular-session close of -9.49%; the prior figure was correctly labeled a snapshot at the time, not a false close, so this is not treated as a formal correction[21].
- A widely-circulated DraftKings AH figure (-22.24%, an EBITDA-guidance-cut claim) could not be corroborated by any 8-K on EDGAR as of cutoff (CIK 1883685's most recent 8-K is dated 25 Sept 2026) and was not reported; DraftKings' confirmed regular session closed +1.77%.
- Veracyte (-54.30%) and MNTN (-54.68%) magnitudes are each confirmed via the company's own 8-K but not independently corroborated by a second outlet.
- A secondary aggregator attributed Natera's AH move to "a new CEO" — no such disclosure exists in Natera's own 8-K; this claimed driver is dropped rather than repeated.
- Gold futures (+0.56%) and Kitco spot (-0.31%) disagreed on direction Thursday; silver futures (-1.06%) and Kitco spot (-0.08%) agreed on direction but with an approx. 13x magnitude gap, wider than the "roughly triple" pattern of recent editions. Kitco's own implied prior-day baseline did not reconcile cleanly against the prior edition's logged Wednesday Kitco close — treat Thursday's Kitco figures as directional only, not perfectly continuous.
- DXY: Yahoo Finance (+0.10%) and the Investing.com proxy (-0.05%) disagreed on direction again, a recurring intermittent conflict. A methodology-continuity flag: the Investing.com series used may track the same underlying index as Yahoo's rather than being a genuinely independent futures proxy — worth re-examining at a future edition.
- Minor vendor-revision variance: Investing.com's gold/silver futures Wednesday-base figures shifted by approx. 0.05-0.10 percentage points versus the prior edition's logged figures — immaterial, disclosed for completeness.
- No dated news source could confirm a specific fresh catalyst for Thursday's oil rebound; the move is price-confirmed via Investing.com but driver-unconfirmed. Notably, the Bank of England's own statement cited ongoing Middle East-conflict energy risk as live and inflationary, in some tension with Wednesday's "fading war-risk premium" framing.
- Banxico's 25bp cut to 6.25% is secondary-sourced only; banxico.org.mx and its anterior mirror both failed again (404/redirect) on every path tried. A consistent multi-outlet Mexican financial press (Milenio, El CEO, Excélsior-affiliate, PorEsto, Grupo Animal, Almomento) corroborates the figure and vote split.
- A minor index-close rounding variance: AP's own wire (dual-mirror confirmed) gave the S&P 500 at 7,353.73 (-334.89 pts); an independent Reuters-sourced cross-check read 7,353.79 (-334.83 pts) — a six-cent/rounding-level difference, not treated as a genuine conflict.
- Arm Holdings' approx. $1.44bn revenue figure is secondary-sourced; the 6-K's own exhibit did not surface the headline figures directly on this edition's fetch.
- No independently verifiable analyst actions (upgrades/downgrades/price targets) were found for the session; a circulating "biggest calls" list was spot-checked against several claims and found unsupported, consistent with this report's standing fabrication-trap caution, and omitted entirely.

Annex B — Data points sought but not verified this edition

- LME copper's Thursday 5 Nov settlement — westmetall.com had not posted a 5 Nov row at research time; most recent confirmed figure is Wednesday 4 Nov.
- October 2026 US nonfarm payrolls consensus estimate — not found despite repeated attempts across several vendors; appears genuinely not yet published ahead of Friday's release.
- Dealer gamma / options-flow data — zerogex.io (placeholder dashes) and SpotGamma (client-side app, no server-rendered data) both remain structurally unusable.
- Banxico's current rate and decision via its own primary source — banxico.org.mx unreachable again; relied on secondary multi-outlet sourcing only.
- A primary-filing-confirmed driver for the circulated DraftKings AH figure — no corresponding 8-K found; the figure is not reported.
- A news-confirmed catalyst for Thursday's oil rebound — the price move itself is confirmed, the driver is not.
- A reliably-sourced single-name implied-volatility or options-flow figure for the session — optionslam.com fetch failed; no usable alternative found.
- ECB's exact next Governing Council meeting date — still unconfirmed; estimated mid-December by typical cadence only.

Method: every figure traces to a named source in Annex C; where sources disagreed, the better-corroborated figure was used and the conflict disclosed. Nothing estimated or filled from memory — unverifiable items are listed in Annex B. Not investment advice.
