Daily Economic Briefing

Monday 9 November 2026 | Window: Thu 5 Nov 2026 20:00 ET – Sun 8 Nov 2026 20:21 ET (Fri 6 Nov close/AH, the window's one NYSE session, plus the weekend) | Research cutoff Sun 8 Nov 2026, 20:21 ET | Edition 59

60-second read

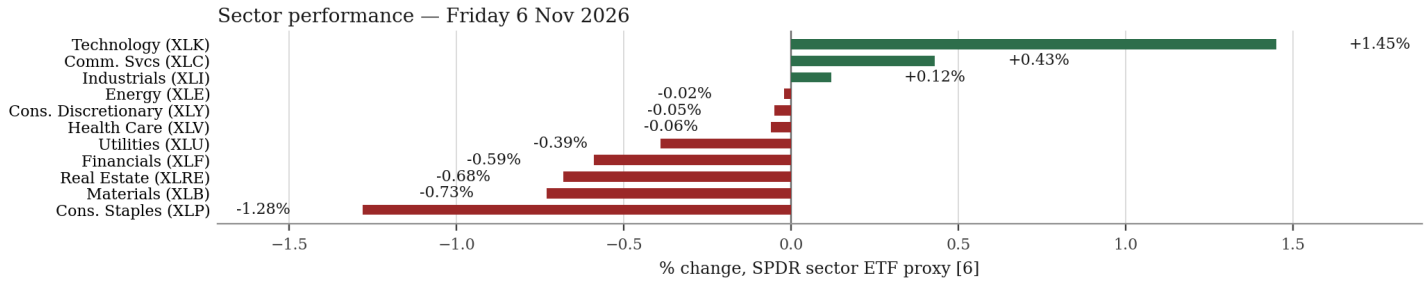

1. October payrolls blew past consensus — nonfarm payrolls +165,000 versus a FactSet-polled median of +65,000, unemployment steady at 4.1%, average hourly earnings +3.1% y/y, and a combined +84,000 upward revision to August/September — and flipped December 8-9 FOMC hike odds straight back toward approx. 76-77%, reversing almost all of Thursday's dip to approx. 66.5%; Treasury yields and the dollar firmed in step.
2. Equities staged a narrow, chip-led relief rally that reversed only part of Thursday's rout: the S&P 500 rose 0.3% to 7,376.86 and the Nasdaq Composite rose 1.1% to 24,579.42, but the Dow fell 0.5% to 51,285.73 and just 3 of 11 sector ETFs closed higher — Technology clawed back only a sixth of Thursday's 8.00% loss.
3. A split earnings reaction carried over from Thursday night: JFrog (+35.33%), Airbnb (+11.67%) and Cloudflare (+9.91%) all held or extended their beat-driven after-hours pops into Friday's close, while Atlassian (-16.15%, soft FY27 growth guide) and Natera (-14.59%, a surprise CEO transition) confirmed Thursday's declines despite both beating on revenue.
4. VIX fell 9.0% to 25.64, unwinding part of Thursday's record spike, but the term structure only partly renormalized — and CBOE's feed reverted to its two known calculation bugs after four clean editions, so every VIX-complex change below is independently recalculated, not the feed's own figure.
5. Policy loose ends: the ECB's next meeting date is finally confirmed (16-17 December), but the Section 301 178-product tariff-exclusion lapse is internally inconsistent in its own Federal Register notice (9 vs. 10 November) with no extension filed, and three other threads — midterm certification, Banxico's primary rate source, and a direct whitehouse.gov funding check — all stayed unverifiable or were downgraded to secondary this edition.

1. Market recap

S&P 500	Dow Jones	Nasdaq Composite	Russell 2000	VIX	10-yr Treasury
7,376.86	**51,285.73**	**24,579.42**	**2,754.11**	**25.64**	**4.86%**
+0.3%	-0.5%	+1.1%	+0.9%	-9.0%	+2bp

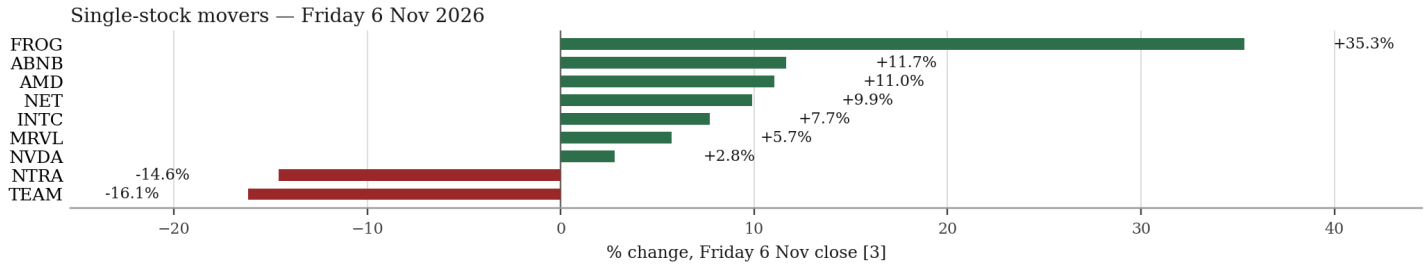

Major indices closed Friday mixed-but-higher on a session dominated by a much-stronger-than-expected October jobs report[1]: nonfarm payrolls rose 165,000 against a FactSet-polled consensus of 65,000, unemployment held at 4.1%, and August/September were revised up a combined 84,000[4][5] — see Section 3. The beat firmed both Treasury yields and the dollar (Section 4) and snapped December rate-hike odds back toward their pre-selloff range (Section 3), even as it fed a chip-led equity rally that only partly reversed Thursday's AI-capex rout. The S&P 500 added 23.13 points (+0.3%) to 7,376.86, the Nasdaq Composite added 264.43 points (+1.1%) to 24,579.42, and the Russell 2000 rose 0.9% to 2,754.11, while the Dow — which lacks the same semiconductor weighting — fell 237.33 points (-0.5%) to 51,285.73[1]. A widely-circulated secondary figure for Friday's close (Dow -3.44%, S&P -4.30%, Nasdaq -5.52%) was checked against the price-history record and found to be a near-exact republish of Thursday's actual close under Friday's date — excluded as the stale-data trap this report watches for every edition.

Sector performance

Breadth stayed narrow: only 3 of 11 SPDR sector ETFs closed higher[6]. Technology (XLK +1.45%) led, clawing back less than a fifth of Thursday's 8.00% drop as the semiconductor complex staged a relief rally (Section 2); Communication Services (XLC +0.43%) and Industrials (XLI +0.12%) were the only other advancers. Consumer Staples (XLP -1.28%) was the session's laggard, with Materials (XLB -0.73%), Real Estate (XLRE -0.68%) and Financials (XLF -0.59%) also notably weak — a rotation out of Thursday's defensive leadership and back toward the names that fell hardest Thursday, rather than a broad risk-on day.

2. Equities and earnings

Ticker	Move	Driver
JFrog (FROG)	+35.33%	Confirmed Friday close extending Thursday's AH pop on a Q3 beat-and-raise (revenue $179.2m, +31% y/y)[3]
Airbnb (ABNB)	+11.67%	Confirmed Friday close; Thursday's AH beat reaction held and extended[3]
AMD	+11.04%	Semiconductor relief rally; no fresh company news in the window, AMD's own Q3 beat was reported 3 Nov, before this window opened[2]

Cloudflare (NET)	+9.91%	Confirmed Friday close; Thursday's AH beat reaction held and extended[3]
Intel (INTC)	+7.71%	Semiconductor relief rally; no fresh company news in the window[2]
Marvell (MRVL)	+5.73%	Semiconductor relief rally; no fresh company news in the window[2]
Nvidia (NVDA)	+2.78%	Semiconductor relief rally; no fresh company news in the window[2]
Natera (NTRA)	-14.59%	Confirmed Friday close; surprise CEO transition (Chapman to Moshkevich) plus a wider GAAP loss and raised spending guidance, despite a Q3 revenue beat (+34.1% y/y)[3]
Atlassian (TEAM)	-16.15%	Confirmed Friday close; soft FY27 revenue-growth guide (approx. 13.75% vs. Q1's 24%) despite a Q1 beat[3]

The dominant single-stock story was a reversal, not a resolution, of Thursday's AI-capex selloff: Nvidia, AMD, Micron, Marvell, Broadcom and Intel all fell double digits Thursday on no company-specific news, and all six recovered part of that loss Friday on, again, no identifiable fresh news — AMD +11.04%, Intel +7.71%, Micron +5.12%, Marvell +5.73%, Nvidia +2.78% and Broadcom +0.74%[2], with Technology the sector-level beneficiary (Section 1). None of the six has regained Wednesday's pre-selloff level.

Thursday evening's second wave of after-hours earnings was reported last edition only as unconfirmed snapshots; Friday's regular session confirmed a genuine split. JFrog's +35.33% was the week's largest beat-driven move on a clean Q3 (revenue $179.2m, +31% y/y)[3]; Airbnb (+11.67%) and Cloudflare (+9.91%, itself recovering from an 8.28% Thursday decline) both held their beat reactions into the close[3]. Atlassian and Natera went the other way: Atlassian fell 16.15% despite a Q1 revenue beat (+24% y/y) because FY27 guidance implies growth slowing to approx. 13.75%[3], and Natera fell 14.59% — a smaller decline than Thursday's AH snapshot had implied — on a surprise CEO transition from Steve Chapman to Solomon Moshkevich disclosed the same day as a wider GAAP loss and raised spending guidance, despite revenue growing 34.1% y/y[3]. This is this report's latest instance of a standing pattern: a clean beat guarantees nothing about the market reaction, in either direction, even within the same session.

No analyst upgrade, downgrade or price-target change from Friday's session could be independently corroborated against a named analyst or firm despite a dedicated search; none is reported rather than repeating an unverifiable claim (Annex B).

3. Macro, policy and rates

Central bank	Policy rate	Last change	Next decision
Federal Reserve	3.75%–4.00%	Hiked 25bp, 16 Sept 2026 (12-0); held again 28 Oct 2026 (10-2)	8–9 Dec 2026 (SEP)
Bank of Japan	approx. 1.25%	Hiked 25bp, 18 Sept 2026 (7-2); held again 29–30 Oct 2026 (8-1)	17–18 Dec 2026
Bank of England	4.00%	Hiked 25bp, 5 Nov 2026 (8-1, Mann dissent for 50bp)	17 Dec 2026
European Central Bank	Deposit 2.50% / refi 2.65% / lending 2.90%	Held, last reviewed 28–29 Oct 2026	16–17 Dec 2026
Bank of Canada	2.50%	Hiked 25bp, 28 Oct 2026	9 Dec 2026
Reserve Bank of Australia	4.85%	Hiked 25bp, 3 Nov 2026 (6-3 split, 5th hike of 2026)	7–8 Dec 2026
Swiss National Bank	0.00%	Held, last assessed 24 Sept 2026	10 Dec 2026
Norges Bank	4.50%	Hiked 25bp, 24 Sept 2026	17 Dec 2026
Riksbank	2.00%	Hiked 25bp, 4 Nov 2026 (first hike since 2023)	16 Dec 2026 (inferred)
Banxico	6.25% (secondary-sourced)	Cut 25bp, 5 Nov 2026 decision / eff. 6 Nov (3-2 vote)	17 Dec 2026 (secondary-sourced)

October's nonfarm payrolls report, released 8:30am ET Friday, was this edition's dominant macro print: +165,000 jobs against a FactSet-polled median forecast of +65,000 — a 100,000 upside surprise — with unemployment unchanged at 4.1%, average hourly earnings up 0.4% m/m and 3.1% y/y, and combined upward revisions of 84,000 to August (now +186,000) and September (now +60,000)[4][5]. December 8-9 FOMC hike odds, which had eased sharply to approx. 66.5% on Thursday's flight-to-quality selloff, snapped back to approx. 76.5-77% per a fresh Polymarket pull[7], corroborated by DeFi Rate's now-refreshed blended Kalshi/Polymarket aggregator (77% hike, 23% hold), whose own daily history shows the move happening on Friday itself (64.5% Wed/Thu → 77.5% Fri → 76.5% Sat)[8] — effectively a full round-trip back toward the hawkish levels seen two editions ago. Kalshi's direct site remained rate-limited (HTTP 429, a 22nd-plus straight failure) and CME FedWatch's direct page timed out again (an 18th-plus straight failure); both remain usable only via the secondary aggregators above.

The European Central Bank's long-open sub-question — its exact next meeting date — is now resolved directly against ecb.europa.eu: 16-17 December 2026[10]; the deposit/refi/lending rate complex itself remains unchanged and settled. Banxico's own primary site again could not be reached this edition (every path tried now redirects to a dead "anterior" mirror subdomain that itself 404s, a different failure signature than previous editions' outright block); its 25bp cut to 6.25% stays secondary-sourced only, via consistent reporting across several independent Mexican outlets[11]. The Riksbank's vote split from its own 4 November hike remains unresolved; minutes are due 10 November, after this window closed.

The Section 301 exclusion covering 178 Chinese products is due to lapse imminently, but the underlying Federal Register notice is internally inconsistent about exactly when: its own DATES section states 11:59pm ET Monday 9 November 2026, while its background narrative and a separate USTR press release both say the exclusions are "extended until November 10, 2026"[9]. No new extension notice had been filed as of this window's close. Certification of the 3 November midterm elections could not be confirmed one way or the other this edition despite a dedicated search; the outcome itself (Democratic control of both chambers) is not in question, but certification status remains an open thread. Government funding status could not be re-confirmed directly against whitehouse.gov this edition — the site's own pages did not surface funding-related content on any path tried — so the standing fact (H.R. 6500 funds the government through 11 December 2026, no shutdown in effect) is carried forward on secondary sourcing only this time[12], a one-edition downgrade from last edition's direct confirmation.

4. Commodities and FX

Instrument	Level	Chg	Note
WTI crude	$90.83	approx. flat	Vendor revised its own Thursday base; direction unresolved depending on which base is used[13]
Brent crude	$98.32	+0.03%	Essentially flat; Wednesday's crash/Thursday's rebound pattern stalled[13]
Henry Hub nat. gas (NGZ6, Dec)	$2.998/MMBtu	+1.73%	Two-source reconciliation clean again; no roll to NGF7 yet[13]

Gold futures	$4,074.90	-0.94%	Vendor revised its own Thursday base (magnitude only)[13]
Silver futures	$51.942	-0.83%	Vendor revised its own Thursday base, including a sign flip[13]
COMEX copper	$6.2375/lb	-0.52%	Vendor revised its own Thursday base (magnitude only)[13]
LME copper, cash	$13,955.00/t	-1.10%	Thursday's previously-missing row has now posted, unchanged from logged figure[14]
LME copper, 3-month	$13,780.00/t	—	See cash note[14]
DXY (Yahoo DX-Y.NYB)	102.30	+0.74%	Agrees with the Investing.com proxy this session[19]
DXY (Investing.com proxy)	102.179	+0.74%	Direction conflict from last edition did not recur[13]
EUR/USD	1.1144	-0.67%	Clean, no revision[13]
GBP/USD	1.3350	-0.75%	Clean, no revision[13]
USD/JPY	158.48	+0.51%	Clean, no revision[13]
2-yr Treasury	4.51%	+5bp	Partial unwind of Thursday's flight-to-quality rally[15]
10-yr Treasury	4.86%	+2bp	See 2-yr note[15]
30-yr Treasury	5.26%	+1bp	See 2-yr note[15]

Crude stalled rather than extending Thursday's rebound: Brent closed essentially flat (+0.03%) and WTI's direction depends on which of the vendor's own two Thursday figures is used as the base — another instance of the retroactive-revision trap this report watches for every edition, this time hitting WTI, gold futures, silver futures (with an outright sign flip on Thursday's own figure) and COMEX copper[13]. Henry Hub's two-source reconciliation stayed clean for a fourth consecutive check, with the December (NGZ6) contract still front-month. LME copper's previously-missing Thursday settlement row has now posted and matches what was already logged for Wednesday, resolving last edition's open question: the gap was a one-off publication lag, not a new recurring problem[14]. Kitco's historical spot-close pages for gold and silver could not be reached this edition at all (both now redirect to live-quote-only views with no retained close); no spot figure is reported rather than estimating one (Annex B).

The dollar strengthened broadly on the payrolls beat and the hawkish rate-odds repricing (Section 3): DXY rose approx. 0.74% on both tracked benchmarks, which agreed with each other this session after an intermittent conflict the edition before, while EUR/USD and GBP/USD both fell and USD/JPY rose[13][19]. Treasury yields rose 1-5bp across the curve, led by the front end — a partial unwind of Thursday's flight-to-quality rally and consistent with the market trimming some of its dovish repricing[15].

5. Derivatives, volatility and positioning

VIX fell 9.0% to 25.64, unwinding part of Thursday's record +69.66% spike but staying well above its pre-spike base of approx. 16.6. VIX9D fell 16.78% to 27.18, VIX3M fell 3.72% to 24.60, VIX6M fell 2.33% to 24.70, VVIX fell 9.67% to 121.94 and SKEW rose 2.80% to 153.55[16] — every figure independently recalculated from the feed's raw levels, because CBOE's own feed reverted to both of its known calculation bugs this edition (a duplicated prior-close field, and a change-percent field that divides by the wrong price) after four consecutive clean editions; the feed's own reported percentages diverge from the figures above by roughly 1-4 points on every series. The term structure only partly renormalized: the front end stayed inverted (VIX9D 27.18 > VIX 25.64 > VIX3M 24.60), but the back end flipped to slight contango (VIX6M 24.70 just above VIX3M 24.60) — a mixed, transitional shape rather than a clean return to either backwardation or contango. No single-name options-flow or gamma story could be independently verified for Friday's session: zerogex.io remained unusable (a 20th straight failure, placeholder data with no timestamp), SpotGamma returned a Cloudflare block (a 14th straight failure), and optionslam.com exposes only the current day's data, not a historical date.

The CFTC's Commitment of Traders report, covering Tuesday 3 November data, was released on schedule at 3:30pm ET Friday[17] — the first fresh positioning data since the edition covering 2 November, though Friday's own payrolls-and-chip-rally story was judged the more dominant one this edition, so the data is summarized here rather than charted. Asset managers remain net long and leveraged funds net short in S&P 500 E-mini futures, by a wide margin relative to open interest (asset managers +46.75% of OI, leveraged funds -18.75%); in Nasdaq-100 E-minis both cohorts are net long but modestly so (+25.00% and +3.44% of OI respectively); in Russell 2000 E-minis asset managers are only marginally net long (+5.26% of OI) against a more meaningfully net-short leveraged-fund base (-12.26% of OI). The CFTC's previously-announced move to twice-weekly CoT releases still has no confirmed start date; this report followed the old weekly, three-day-lag cadence. Funding: SOFR and EFFR were last published at 3.92% and 3.88% respectively, both dated Thursday 5 November — Friday's own print was not yet available by this window's cutoff, since the New York Fed publishes a day's rate the following business day morning[18].

6. The day ahead

Date	Event	Consensus / context
Tue 10 Nov	October US CPI, 8:30am ET	Secondary-sourced calendar date; no consensus figure found this edition
Tue 10 Nov	Section 301 178-product exclusion rate resumption (if no extension)	Primary notice itself is internally inconsistent on the 9th vs. 10th; watch for a last-minute filing
Tue 10 Nov	Riksbank minutes (4 Nov decision)	Resolves the open vote-split question
Wed 11 Nov	Veterans Day	Equities open; Treasury cash market and SOFR/EFFR/OBFR fixings closed
Fri 13 Nov	October US PPI, 8:30am ET	Secondary-sourced calendar date; no consensus figure found this edition
Tue 8 - Wed 9 Dec	FOMC meeting (SEP)	Odds approx. 76-77% hike per Section 3
Wed 16 - Thu 17 Dec	ECB Governing Council	Date newly confirmed this edition; rate complex currently unchanged

Sector setup we take into Monday's session

- Semiconductors and Technology: watch whether Friday's relief rally extends or Thursday's selloff reasserts — none of the six chip names tracked has regained its pre-selloff level.
- Rates-sensitive sectors: a firmer dollar and firmer yields on the payrolls beat is a headwind for duration-sensitive and rate-sensitive names broadly, even as it supported risk appetite in chips Friday.

- Trade-exposed names: the Section 301 178-product exclusion lapse is imminent and unresolved; consumer and industrial names with China-exposed input costs are the ones to watch if the standard rate resumes without an extension.
- Volatility: VIX's term structure is still mixed, not settled — a renewed front-end spike or a full return to contango are both live possibilities into the week.

Annex A — Assumptions, corrections and status

- No correction to a prior edition's published figure was identified this edition.
- Friday's US index closes are single-sourced to an AP-wire mirror (via lanacion.com.ar); direct apnews.com and reuters.com remained unfetchable. Corroborated directionally only, via sector-ETF triangulation.
- A circulating secondary figure for Friday's index closes was found to be a near-exact restatement of Thursday's actual close under Friday's date — excluded before publication as the stale-data-republishing trap.
- No Friday analyst upgrade/downgrade/price-target action could be independently corroborated against a named analyst or firm; none is reported.
- A $5.2bn Brookfield/CPP acquisition of LXP Industrial Trust closed 7 November; the deal itself was announced in July 2026, so it is not treated as new information and is omitted from the main text.
- Government funding status could not be re-confirmed directly against whitehouse.gov this edition (no funding-related content surfaced on any page checked); carried forward on secondary sourcing only, a one-edition downgrade from last edition's direct confirmation.
- Certification status of the 3 November midterm elections was not found confirmed either way this edition; remains an open live thread.
- Banxico's primary site failed again this edition via a new failure signature — every path tried now redirects to a dead "anterior" mirror subdomain that itself 404s. Its rate and next-decision date remain secondary-sourced only.
- The vendor-retroactive-revision trap recurred on fresh re-pulls of Thursday's own base for WTI, gold futures, silver futures (including a sign flip) and COMEX copper; Friday's figures are reported against each vendor's current numbers, with the revision disclosed rather than hidden.
- LME copper's missing-Thursday-settlement-row issue, flagged last edition, resolved cleanly: both the Thursday and Friday rows are now posted, and the previously-confirmed Wednesday figure is unchanged. This confirms a one-off publication lag, not a new recurring problem.
- Kitco's historical spot-close pages for gold and silver could not be reached this edition (both redirect to live-quote-only views with no retained close); no Kitco spot figure is reported for Friday.
- CBOE's VIX-complex feed reverted to both of its two known calculation bugs this edition (a duplicated prior-close field; a change-percent field dividing by the wrong price) after four consecutive clean editions. Every percentage reported in Section 5 is independently recalculated from raw levels, not the feed's own field.
- zerogex.io (20th straight failure) and SpotGamma (14th straight failure, Cloudflare-blocked) remain unusable for dealer-gamma data; optionslam.com exposes only the current day, not a historical date.
- The CFTC's previously-announced move to twice-weekly Commitment of Traders releases still has no confirmed start date; Friday's report followed the prior weekly cadence.

Annex B — Data points sought but not verified this edition

- A consensus figure for October's average hourly earnings (only the headline payrolls and unemployment-rate consensus figures were found).
- Kitco's directly-stated historical spot close for gold and silver on Friday 6 November (pages redirect to live-quote-only views).
- The vote split from the Riksbank's 4 November rate decision (minutes due 10 November, after this window closed).
- Certification status of the 3 November 2026 US midterm elections.
- A direct whitehouse.gov confirmation of government funding status this edition (secondary-sourced only).
- Banxico's policy rate and next-decision date via its own primary site.
- Any independently verifiable analyst upgrade, downgrade or price-target action from Friday's session.
- The exact resumption date of the Section 301 178-product exclusion lapse — the primary Federal Register notice itself states both 9 and 10 November in different sections.
- A confirmed start date for the CFTC's planned move to twice-weekly Commitment of Traders releases.
- Any single-name options-flow or dealer-gamma figure for Friday's session.
- Friday's own SOFR/EFFR print (not yet published by the New York Fed as of this window's cutoff).
- A consensus figure for October and November US CPI/PPI release dates beyond the secondary-sourced calendar entries in Section 6.
