

Daily Economic Briefing

Wednesday 30 September 2026 | Window: Mon 28 Sept 20:00 ET – Tue 29 Sept 20:20 ET (Tue 29 Sept close/AH, the window's one NYSE session) | Research cutoff 20:20 ET 29 Sept
| Edition 31

Assumptions, corrections and status this edition

- The RBA's Tuesday decision, previewed at the last edition as a likely +25bp hike to 4.60%, is now confirmed outcome: the Board hiked unanimously to 4.60%, a 15-year high.^[17]
- **Correction to a carried-forward figure:** last edition's Wednesday-PCE consensus (headline approx. +0.4% m/m / 3.7% y/y, core approx. +0.3% m/m / 3.3% y/y) was carried forward without independent re-derivation. A fresh check this edition finds forecaster surveys clustering closer to headline approx. +0.3% m/m and core approx. +0.2-0.3% m/m/approx. 3.4% y/y — the m/m figures have come in a touch lower and core y/y a touch higher than previously stated. Headline y/y is reported as a disclosed range (approx. 2.7% survey consensus vs. approx. 3.78% Cleveland Fed Nowcast) rather than a single figure, since the two are not directly comparable measures.^{[26][27]}
- The DXY-vs-FX-crosses directional conflict flagged the last two editions substantially resolved Tuesday: EUR and GBP (together approx. 70% of the DXY basket) both moved in the same direction as DXY's rise; only the smaller-weighted JPY cross diverged. Not treated as a fresh third occurrence of the standing anomaly.^{[36][37]}
- Gold's Kitco-vs-USAGOLD gap, which widened to approx. \$32 during Monday's fast selloff, is back to a normal single-digit spread (approx. \$5) when compared at matching snapshot timestamps Tuesday — consistent with last edition's "vendor snapshot-timing artifact" read, not a reopened structural split.^{[5][33]}
- A same-day sourcing conflict on silver's sign (Kitco/USAGOLD show Tuesday silver modestly up; an Investrade end-of-day wrap shows it down approx. 0.9%, levels tightly clustered) is disclosed in Section 4 rather than resolved one way.^{[5][33][31]}
- One search result placed Tuesday's Brent settle near \$96/bbl; this figure does not reconcile arithmetically against Monday's logged \$105.28 close and is treated as a stale/extraction artifact. The \$102.59 figure used below reconciles to the penny against Monday's close across two independent sources and is used as authoritative.^{[30][31]}

60-second read

1. **Fair Isaac (FICO)** -26.52% was the session's dominant single-stock story: FHFA Director Bill Pulte announced Fannie Mae/Freddie Mac will move to a unified mortgage-pricing model blending VantageScore alongside FICO scores, directly threatening FICO's credit-scoring monopoly — a potential read-across risk for other credit-bureau names (Equifax, TransUnion) heading into Wednesday.^[16]
2. Indices closed only modestly lower (S&P 500 -0.16% to 7,670.84) but sector leadership flipped entirely from Monday: Utilities led (+1.17%) and Energy lagged (-0.90%) as oil gave back most of Monday's Hormuz-driven spike (Brent -2.6% to \$102.59, WTI -3.48% to \$89.38).^{[17][30]}
3. The RBA hiked 25bp to 4.60% (unanimous, a 15-year high), matching its preview, while October Fed-hike odds held hike-favored (Polymarket approx. 68-69%, CME-linked citations approx. 68-77%) as the 10-year Treasury pushed to a fresh 24-year high (approx. 5.26%) even as the 2-year eased to 4.89%.^{[17][21][23][4]}
4. Meta +3.24% on a new "Privacy for Small Business" product launch even as two negative threads stay live: a Cambridge Analytica penalty hearing set for Thursday 1 Oct, and the Muse AI privacy-complaint fallout still simmering without a fresh Tuesday-specific escalation.^{[15][3]}
5. Wednesday's August PCE print (8:30am ET) is the week's key data risk — see the correction above on consensus — followed by Meta's penalty hearing and ISM Manufacturing Thursday and the September jobs report Friday.^{[25][28][29]}

1. Market recap

S&P 500 7,670.84 -0.16%	Dow 51,349.92 -0.26%	Nasdaq Comp. 26,797.54 -0.09%	Russell 2000 2,807.92 -0.35%	VIX 16.04 -0.19%	10-Yr Treasury 5.26% +2bp
DXY 101.36-101.50 +0.16-0.30%			Gold (spot) approx. \$4,158-4,163 +1.1%		

A quiet mean-reversion session after Monday's risk-off shock. All four major indices closed lower but only fractionally (S&P -0.16%, Dow -0.26%, Nasdaq -0.09%, Russell -0.35%), confirmed via AP's wire cross-checked against ETF proxies.^{[1][6]} Nasdaq-100 (QQQ +0.19%) actually diverged positive against the Composite's small decline — Meta's +3.24% lifted the mega-cap-heavy QQQ while broader semiconductor/smaller-cap weakness dragged the Composite. The 10-year Treasury pushed to a fresh 24-year high (approx. 5.26%) even as the 2-year eased slightly to 4.89%, a modest bull-flattening move at the front end that only partly explains itself against Monday's disclosed 2-year move-size mismatch.^[4] VIX eased slightly to 16.04 (-0.19%), computed manually against Monday's logged 16.07 close; the CBOE feed's own prev. day close field matched this time, unlike its intermittent bug in prior editions.^[2]

2. Equities and earnings

Sector leadership was a near-total reversal of Monday: Monday's only green sectors (Health Care, Staples, Energy) were Tuesday's laggards, while Monday's worst performers (Comm Services, Cons. Discretionary, Financials) mostly recovered. Utilities' +1.17% outperformance is a bit of an outlier against the "yields at 24-year

highs" backdrop (rising-yield tapes normally punish bond-proxy sectors) and looks more idiosyncratic/data-center-power-demand driven than rate-driven; Financials stayed slightly negative (-0.33%) despite a steeper long end, which would normally help bank margins — worth watching into Wednesday's PCE.^[7] Energy (-0.90%) lagged as Brent gave back 1.7 points of Monday's war premium.^{[30][31]}

Single-stock movers

Ticker	Move	Driver
Iovance Biotherapeutics (IOVA)	+31.48%	Raised FY revenue guidance to \$410-420m; guidance detail single-sourced to aggregator coverage, no primary release located
Fair Isaac (FICO)	-26.52%	FHFA's Pulte: Fannie/Freddie moving to a unified mortgage-pricing model blending VantageScore, threatening FICO's scoring monopoly
Carnival (CCL)	+13.41%	Q3 adj. EPS \$1.43 (beat \$1.35 est.), record revenue \$8.44bn; Q4 EPS guide of approx. \$0.20 came in below the \$0.24 consensus
Bloom Energy (BE)	+10.80%	AI-data-center power-demand rally; RBC (\$335 PT)/Mizuho (\$351 PT) bullish notes, exact dating of the PTs unconfirmed
CarMax (KMX)	+4.74%	Fiscal Q2 adj. EPS \$1.16 vs. \$0.73 consensus, revenue approx. \$7.9bn vs. \$7.03bn est., unit sales +14.7%
Meta Platforms (META)	+3.24%	"Muse for Small Business" launch (Asana/Zoom/Intuit/Box/Canva/Slack integrations) offset lingering Muse privacy overhang
Monday.com (MNDY)	-3.80%	JPMorgan downgrade to Neutral, PT cut to \$87 from \$90

Concentrix (CNXC) closed -2.24% after Q3 non-GAAP EPS of \$2.92 (SEC 8-K primary source) on revenue of \$2.4537bn, down 1.2% YoY reported; the exact consensus EPS figure it beat or missed against could not be reconciled across aggregators (one implied an in-line print, another implied a beat), though the \$2.92 actual itself is primary-source-confirmed.^[10] A one-day gurufocus reference to an "8% slump" intraday appears to be a pre-close snapshot rather than the -2.24% close and is not used.^[8] Jefferies Financial and Vail Resorts' Monday earnings beats, already carried in the last edition, are not repeated here.

Analyst actions: JPMorgan downgraded PepsiCo to Neutral from Overweight, cutting its PT to \$138 from \$170 on continued Frito-Lay salty-snacks weakness and trimming 2027/2028 EPS estimates — PEP itself barely moved (+0.15%), suggesting the cut was largely priced in.^[11] Argus downgraded Warner Bros. Discovery to Sell, citing a narrowing gap to Paramount Skydance's pending \$31/share acquisition price and limited remaining upside; WBD closed -0.16%, already trading near the deal price.^[12] JPMorgan also downgraded XPeng to Neutral, cutting its PT sharply to \$11.50 from \$24.^[11] On the positive side, Leerink Partners raised Twist Bioscience's PT to \$190 from \$160 and Bruker's to \$80 from \$60 (both maintained Outperform), and Wells Fargo upgraded BlackRock TCP Capital to Equal Weight with a \$4 PT.^[12]

Follow-ups on open threads: Meta's Cambridge Analytica case (a New Mexico jury found the company liable on 43.9m counts, theoretical exposure up to approx. \$219.5bn) has its actual-penalty hearing set for Thursday 1 Oct before Judge Francis Mathew — not yet resolved.^[13] The Muse AI privacy fallout (unauthorized address-sharing, Messages-database syncing allegations, Amazon blocking Muse from its site) continued to simmer through reporting dated 27-28 Sept, but no new Tuesday-specific escalation was found.^[13] Boeing bounced +1.78% to \$187.68 after Monday's -6.91% slide on the FAA's 737 MAX 10 certification delay; no new timeline news was found — the move looks like routine post-selloff stabilization, not a fresh catalyst.^[8] MongoDB (+0.75%) held an Investor Day Tuesday; interim President Dev Ittycheria told Bloomberg the board is "not in a rush" to name a permanent CEO successor and has retained a search firm, while reaffirming Q3/FY2027 guidance.^[14]

3. Macro, policy and rates

The Reserve Bank of Australia hiked its cash rate 25bp to 4.60% Tuesday, unanimous, a 15-year high — its fourth hike of 2026 — citing inflation at 3.5% against a 2-3% target band, Middle East-driven energy-price pressure and AI-driven tech demand as ongoing risks; the Board said it will raise further "if needed."^[17] NY Fed President John Williams spoke Tuesday afternoon on the outlook, having called a year-end hike "a reasonable way of thinking about it" in prior remarks, but no post-speech readout of Tuesday's specific remarks or market reaction could be confirmed.^[21] October Fed hike-odds reads for Tuesday: Polymarket approx. 68-69% hike; Kalshi secondary citations approx. 65-69.5% (Kalshi's own site/API returned HTTP 429 for a tenth straight edition); CME-linked secondary citations approx. 68-77%, still dispersed but narrower than last edition's approx. 54-85% spread — the recurring stale approx. 54% figure did not reappear this run.^{[21][22][23]} Fed Chair Kevin Warsh, the next FOMC meeting (Oct 27-28), the BoE's next decision (Thu 5 Nov, currently 3.75%) and the BoJ's next meeting (Oct 29-30) were all re-confirmed fresh directly against their own primary-source pages.^{[18][19][20]} The US-China "30-for-30" tariff framework (77 Chinese and 1,600+ US products recommended for reduced tariffs via the new US-China Board of Trade) remains at the list-identification stage pending each side's domestic legal processes — no Tuesday-dated implementation news found.^[24] 10-year Treasury yields pushed to approx. 5.26% (a fresh 24-year high) per the official par-yield CSV, while the 2-year eased to 4.89% from Monday's 4.92%.^[4]

4. Commodities and FX

Instrument	Level	Chg	Note
WTI crude	\$89.38/bbl	-3.48%	Settle reconciles to the penny vs. Monday's \$92.60 close; same front-month contract ^{[30][31]}

Brent crude	\$102.59/bbl	-2.6%	Reconciles vs. Monday's \$105.28 close; still Nov contract, roll to Dec plausible imminently ^{[30][31]}
Henry Hub nat. gas	approx. \$3.09-3.10/MMBtu	approx. -3.2%	Two partial extractions agree directionally, not to the cent; treat as approximate ^[32]
Gold (spot)	\$4,157.80-4,162.84	approx. +1.1%	Kitco/USAGOLD gap back to approx. \$5 at matching timestamps, vs. Monday's approx. \$32 ^{[5][33]}
Silver (spot)	\$60.77-61.15	disputed sign	Kitco/USAGOLD show approx. +0.1-0.4%; Investrade's EOD wrap shows -0.92% off a different reference point ^{[5][33][31]}
Copper (LME cash, Westmetall)	\$14,474.50/t	-0.48%	LME.com failed a tenth straight edition; Westmetall figure matches prior edition's logged Monday close exactly ^[35]
DXY	101.36-101.50	+0.16-0.30%	Four sources converge on level and direction ^{[4][36][37]}
EUR/USD	approx. 1.1340	approx. -0.3 to -0.45%	Three-month low; one stale outlier quote (1.1366) discarded ^{[4][36]}
GBP/USD	approx. 1.3229-1.3230	approx. -0.18%	Three-month low ^{[4][36]}
USD/JPY	approx. 157.21-157.26	approx. -0.09 to -0.14%	Modest yen strength, the one cross diverging from DXY's direction ^[4]

The DXY-vs-crosses mismatch flagged the last two editions substantially resolved Tuesday: EUR and GBP (together approx. 70% of the DXY basket) both moved in the dollar-strength direction consistent with DXY's rise; only USD/JPY (approx. 14% weight) diverged, too small to contradict the aggregate. A rough weighted reconstruction lands inside the reported DXY range, so this is not logged as a third occurrence of the standing anomaly.^{[4][36][37]} Oil pared most of Monday's Hormuz-driven spike as Saudi pipeline-restoration reports firmed; both WTI and Brent settles reconcile exactly against Monday's logged closes across two independent sources, and remain on the same front-month contracts — though both are close enough to expiry that a roll to the December contract is plausible as soon as Wednesday and should be re-checked.^{[30][31]} Henry Hub gas could not be pinned to a clean two-source settlement figure this edition; the approx. -3% figure above should be treated as directional only.^[32]

5. Derivatives, volatility and positioning

The CBOE delayed-quotes feed gave a full clean sweep Tuesday, every series stamped with a genuine same-day last-trade time: VIX 16.04 (-0.19% vs. Monday's logged 16.07, and for once the feed's own prev_day_close field was not corrupted); VIX9D 14.21, still inverted below spot VIX (the gap actually widened slightly from Monday, -1.68 to -1.83), consistent with the market still pricing Monday's yield/geopolitical shock as a medium-dated repricing rather than an acute near-term one; VIX3M 18.09 and VIX6M 20.20 kept a normal upward slope.^[2] VVIX eased to 89.71 (-1.44%) and SKEW to 144.58 (-1.14%), though SKEW's single flat print (open=high=low=close) reflects its thin-series nature rather than genuine stale data — the timestamp is Tuesday's.^[2] zerogex.io's SPX net dealer gamma moved further negative to -\$17.19bn (from Monday's -\$9.33bn) as spot (approx. 7,671) sat further below a higher gamma flip point (approx. 7,709) — a plausible progression given the flip point rose while spot stayed roughly flat, corroborated directionally by a secondary options-flow note describing negative gamma at nearly every strike 7,590-7,715.^{[39][40]} A Cboe Insights weekly note describing VIX "near a 1-year low of 14.9%" does not match either Monday's or Tuesday's actual VIX closes and is treated as stale background, not a Tuesday reading, continuing the pattern of stale-republished vol commentary flagged in recent editions.^[41] CFTC CoT remains unchanged since the Tue 22 Sept report (Asset Managers net long approx. 934,000-936,000 ES contracts vs. Leveraged Funds net short approx. 375,600-376,000); the next report, covering today's Tue 29 Sept data, is due approx. Friday 2 Oct.^[42] Funding: SOFR printed 3.90% for 28 Sept (latest available, standard one-day lag), no signs of stress.^[43]

6. The day ahead

Date	Event	Consensus / context
Wed 30 Sept, 8:30am ET	August PCE (Personal Income and Outlays)	Headline approx. +0.3% m/m (y/y approx. 2.7% survey vs. approx. 3.78% Cleveland Fed Nowcast, not directly comparable); core approx. +0.2-0.3% m/m / approx. 3.4% y/y — see correction above ^{[25][26][27]}
Thu 1 Oct	Meta Cambridge Analytica penalty hearing (Judge Francis Mathew)	Sets the actual penalty following the 43.9m-count liability verdict; theoretical exposure cited up to approx. \$219.5bn ^[13]
Thu 1 Oct	ISM Manufacturing PMI (Sept)	Secondary-aggregator consensus approx. 55.0 vs. August's 54.6% — not independently confirmed against ISM's own forecast (ISM does not publish one) ^[28]
Fri 2 Oct, 8:30am ET	September employment situation (BLS)	Nonfarm payrolls consensus approx. +90,000 to +100,000, unemployment rate expected to hold at 4.1%; August printed +162,000 vs. a +53,000 consensus ^[29]
approx. Fri 2 Oct	CFTC Commitment of Traders	Due to cover Tuesday 29 Sept positioning data ^[42]

Sector setup we take into Wednesday

- Utilities and Comm. Services led Tuesday's rebound while Energy lagged as oil gave back its war premium — watch whether Energy stabilizes if crude holds near current levels or a fresh Hormuz/Iran headline reignites the risk premium.
- Financials stayed slightly negative despite a steeper long end, an anomaly worth watching given the 10-year's fresh 24-year high — a hawkish PCE surprise could test whether banks finally catch a bid on rates alone.
- Meta enters PCE day with two live idiosyncratic threads (the Thursday penalty hearing, the ongoing Muse privacy fallout) that could dominate its single-stock flow independent of the macro tape.
- FICO's mortgage-scoring-monopoly threat is a sector-wide read-across risk for other credit-bureau and consumer-data names heading into Wednesday.
- A higher-for-longer yield backdrop (10-year at a fresh cycle high) plus a hawkish, unanimous RBA hike raises the bar for Wednesday's PCE to surprise meaningfully to the downside to spark a broad relief rally.

Annex A — Data points sought but not verified this edition

- Iovance Biotherapeutics' exact FY revenue guidance figures (\$410-420m) — sourced only to aggregator news search, no primary press release located.
- Concentrix's exact Wall Street consensus EPS for Q3 — aggregators disagreed on whether the \$2.92 actual (primary-source confirmed via SEC 8-K) represented a beat, miss, or in-line print.
- Whether Bloom Energy's RBC (\$335 PT) and Mizuho (\$351 PT) price targets were issued specifically Tuesday or are earlier reiterations cited in Tuesday's coverage.
- A clean, mutually-corroborating two-source settlement figure for Henry Hub natural gas — two partial extractions agreed only directionally (approx. -3%), not to the cent; one source that produced the gas figure also produced clearly stale oil figures in the same pull.
- The content and market impact of NY Fed President John Williams' Tuesday 2pm ET speech — only a pre-speech preview was found, no post-speech readout.
- A single authoritative CME FedWatch percentage for Tuesday — secondary citations ranged approx. 68-77%, CME's own site remains unreachable via direct fetch.
- BEA's exact stated release time for Wednesday's PCE print — 8:30am ET is standard practice and corroborated by secondary calendars, but BEA's own page did not display a time on this pull.
- A second independent source for the 11 SPDR sector-ETF closes beyond stockanalysis.com — none found publishing same-day sector-ETF-level closes for cross-check.
- Direct access to the kgbgk.substack.com "SPX EOD Brief" article (403 on fetch) — its 0DTE flow and gamma detail above are via search-engine synthesis of that article, not a direct read.
- Reconciliation between zerogex.io's stated gamma wall levels (approx. 7,675 call wall / 7,650 put wall) and a secondary options note's implied walls (approx. 7,720 damping / approx. 7,750 call wall) — only the net GEX sign/magnitude was cross-checked, not the individual wall levels.
- Whether Tuesday's WTI/Brent settle remains on the November contract into Wednesday, given both are close enough to expiry that a roll to December is plausible imminently.
- A definitive resolution of the silver sign conflict (Kitco/USAGOLD +0.1 to +0.4% vs. Investrade -0.92%) — levels are tightly clustered, but the direction of the day's change is genuinely unresolved across sources.

Annex B — Sources

Method: every figure traces to a named source in Annex B; where sources disagreed, the better-corroborated figure was used and the conflict disclosed. Nothing estimated or filled from memory — unverifiable items are listed in Annex A. Not investment advice.
