Daily Economic Briefing

Tuesday 10 November 2026 | Window: Sun 8 Nov 2026 20:00 ET – Mon 9 Nov 2026 20:21 ET (Mon 9 Nov close/AH, the window's one NYSE session) | Research cutoff 8:21pm ET | Edition 60

60-second read

1. Equities staged a broad, 11-of-11-sector reversal — S&P 500 +2.3% to 7,549.94, Nasdaq Composite +2.7% to 25,253.14, Dow +2.2% to 52,389.75, Russell 2000 +3.1% to 2,840.81 — AP's wire called it the S&P's best day since 8 April, nearly erasing the prior week's AI-capex-driven rout.[1]
2. Oil cratered (WTI -4.8% to $86.44, Brent -5.9% to $92.57) on fading Iran-strike risk after fresh Trump remarks, reinforced by a Reuters-reported OPEC October supply increase — the proximate tailwind cited for Monday's equity rally.[26][30]
3. The chip complex's relief rally extended for every name except Nvidia: AMD (+13.3%) and Intel (+5.5%) are now above their pre-selloff levels, while Nvidia alone fell again (-4.3%) — still the market's read-through from the Jensen Huang/Megaspeed China-intelligence reporting that first broke 29 October.[3][10]
4. December 8-9 FOMC hike odds extended further to approx. 77-82% across Polymarket and DeFi Rate's blended aggregator — a third straight directional read the same way, after last edition's full two-day round-trip.[21][22]
5. The VIX complex fully un-inverted into clean ascending contango (VIX -22.3% to 19.92), erasing the entire volatility spike from Thursday's selloff in two sessions flat.[31]

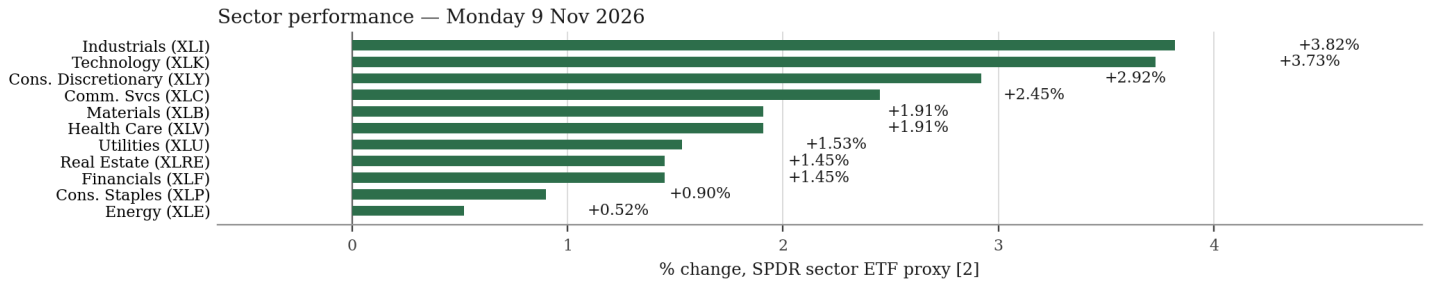

1. Market recap

S&P 500	Dow	Nasdaq Comp.	Russell 2000	VIX	10Y yield
7,549.94	**52,389.75**	**25,253.14**	**2,840.81**	**19.92**	**4.88%**
+2.3%	+2.2%	+2.7%	+3.1%	-22.3%	+2bp

WTI crude	DXY
$86.44	**101.66**
-4.8%	-0.6%

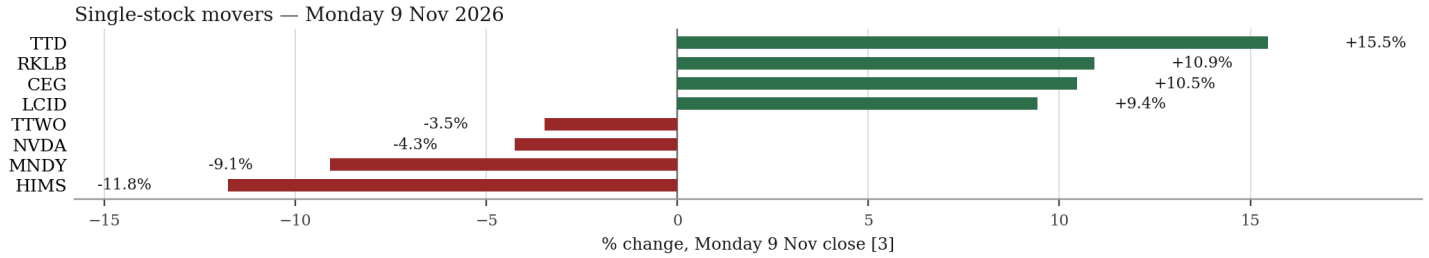

Monday was a near-total reversal of the prior week's turbulence. The S&P 500 rose 2.3% to 7,549.94, the Dow gained 1,104.02 points (+2.2%) to 52,389.75, the Nasdaq Composite added 2.7% to 25,253.14 and the Russell 2000 rose 3.1% to 2,840.81, per AP's wire (via a WTOP.com mirror), AP's own characterization being the S&P's best day since 8 April.[1] CNBC's live blog corroborated direction/magnitude but gave the S&P at +2.4%, a rounding-level discrepancy disclosed (Annex A).[4] The rally was broad-based: a sharply lower oil price (Section 4) eased inflation-adjacent anxiety, dip-buying followed the worst stretch since the spring tariff selloff, and chips extended Friday's bounce.[4][30] Yields nonetheless firmed modestly (Section 4), consistent with December hike odds extending rather than fading (Section 3) — relief, not dovish repricing.

Sector performance

All 11 SPDR sector ETFs closed higher Monday, per stockanalysis.com's price-history pages (single-sourced this edition; a secondary cross-check could not be fetched — Annex A).[2] Industrials (XLI, +3.82%) narrowly led Technology (XLK, +3.73%), with Consumer Discretionary (XLY, +2.92%) and Communication Services (XLC, +2.45%) also outperforming. Energy (XLE, +0.52%) was the clear laggard despite still closing higher — consistent with crude's own sharp decline the same session — with Consumer Staples (XLP, +0.90%) the only other sector under 1%. The 11-of-11 reading is a near-complete reversal of Friday's narrow 3-of-11 breadth and Thursday's 0-of-11 washout.

2. Equities and earnings

Ticker	Move	Driver
TTD	+15.47% to $14.93	Regular session; move predates the Q3 report released after Monday's close (AH +2.41% further, unconfirmed snapshot) — no company-specific driver identified for the regular-session move itself[3][7][9]

RKLB	+10.91% to $58.86	No company-specific driver identified; reports Q3 after Monday's close, outside this window[3]
CEG	+10.46% to $276.09	Q3 beat reported before Monday's open; raised/narrowed FY26 non-GAAP guide — see earnings detail below[3][5]
LCID	+9.42% to $3.60	No company-specific driver identified; part of the broad risk-on tape[3]
TTWO	-3.48% to $207.40	No company-specific driver identified; reports Q3 after Monday's close, outside this window[3]
NVDA	-4.27% to $178.67	Lone semiconductor decliner even as the rest of the complex rallied (below); continues to lag amid the unresolved Jensen Huang/Megaspeed reporting — see Standing note below[3][10]
MNDY	-9.10% to $79.93	Q3 beat reported before Monday's open, but Q4 guide implies growth decelerating to approx. 14% y/y from Q3's 19% — see earnings detail below[3][6]
HIMS	-11.77% to $22.94	Regular session; move predates the Q3 report released after Monday's close (AH -3.40% further, unconfirmed snapshot) — no company-specific driver identified for the regular-session move itself[3][8][9]

The chip complex: a round-trip for everyone except Nvidia

Ticker	Mon close	Mon % chg	vs. pre-selloff (Wed 4 Nov)
AMD	$508.58	+13.26%	+4.05% — regained and exceeded
Intel (INTC)	$59.37	+5.49%	+1.89% — regained and exceeded
Marvell (MRVL)	$154.60	+9.49%	-3.25% — still below
Broadcom (AVGO)	$319.48	+8.78%	-1.84% — still below
Micron (MU)	$733.15	+6.25%	-7.81% — still below
Nvidia (NVDA)	$178.67	-4.27%	-10.72% — furthest below, and the only name to fall Monday

Five of six names extended Friday's relief rally; AMD and Intel have now round-tripped back above their pre-selloff (Wed 4 Nov) levels.[3] Nvidia alone fell again. The proximate story is real but older than Monday: the Times reported 29 Oct, citing unnamed US intelligence sources, that Megaspeed executive Alice Huang was assessed to have been cultivated by China's Ministry of State Security and had developed a close relationship with CEO Jensen Huang, which an FT-sourced account called romantic; Nvidia called the contacts routine, China called the claims groundless.[10] A circulated claim that Nvidia's board announced an investigation on 8 Nov, including a staff apology email, could not be corroborated and is not repeated here as fact (Annex A).

Earnings since Friday's close

Constellation Energy (CEG) — before Monday's open. Q3 GAAP revenue $9,550m (vs. $6,570m Q3 2025); GAAP diluted EPS $5.19 (vs. $2.97); non-GAAP Adj. Operating EPS $5.06 (vs. $3.04). Raised/narrowed FY26 non-GAAP Adj. Operating EPS guide to $12.50-$12.80. Shares rose 10.46%.[5]

monday.com (MNDY) — before Monday's open. Q3 GAAP revenue $377.5m, +19% y/y (above the company's own $368-370m guide); GAAP operating income $31.2m (vs. -$2.4m); non-GAAP operating income $89.4m (24% margin). Q4 non-GAAP guide implies approx. +14% y/y, a deceleration from Q3's 19%; FY26 non-GAAP guide approx. +20% y/y. Shares fell 9.10% despite the beat.[6]

The Trade Desk (TTD) — after Monday's close. Q3 GAAP revenue $736.0m, -0.5% y/y; GAAP diluted EPS $0.08; non-GAAP Adj. EBITDA $265.8m (36% margin), non-GAAP diluted EPS $0.33. Q4 non-GAAP guide: revenue "at least $755m," Adj. EBITDA "at least $280m." Monday's +15.47% predates this report; the AH reaction (+2.41% further) is unconfirmed.[7][9]

Hims & Hers (HIMS) — after Monday's close. Q3 GAAP revenue $890.4m, +49% y/y (in line with the company's own guide); GAAP net loss $33.0m, diluted EPS -$0.14 (vs. $15.8m/$0.06 Q3 2025); non-GAAP Adj. EBITDA $82.4m (9% margin, vs. $78.4m). Q4 guide: revenue $875-895m, Adj. EBITDA $70-90m. Monday's -11.77% predates this report; the AH reaction (-3.40% further) is unconfirmed.[8][9]

No analyst action (upgrade, downgrade or price-target change) tied to a named analyst/firm and a specific stock could be independently verified for Monday's session — a third consecutive edition with none verifiable (Annex B).

3. Macro, policy and rates

Central bank	Policy rate	Last change	Next decision
Federal Reserve	3.75%-4.00%	Held, 28 Oct 2026 (10-2, hawkish dissent)	8-9 Dec 2026
Bank of England	4.00%	+25bp, 5 Nov 2026 (8-1)	17 Dec 2026
European Central Bank	Deposit 2.50% / Refi 2.65% / Marg. lending 2.90%	Held since 16 Sept 2026	16-17 Dec 2026
Bank of Japan	approx. 1.25%	Held, 29-30 Oct 2026 (8-1)	17-18 Dec 2026
Bank of Canada	2.50%	+25bp, 28 Oct 2026	9 Dec 2026
Reserve Bank of Australia	4.85%	+25bp, 3 Nov 2026 (6-3)	7-8 Dec 2026
Swiss National Bank	0.00%	Held since 24 Sept 2026	10 Dec 2026
Norges Bank	4.50%	+25bp, 24 Sept 2026; held again, 5 Nov 2026 (forecast-free interim review)	17 Dec 2026
Riksbank	2.00%	+25bp, 4 Nov 2026 (vote split not yet published)	approx. 16 Dec 2026
Banxico	6.25% (secondary-sourced only)	-25bp, 5 Nov 2026 (3-2, reported)	17 Dec 2026 (secondary-sourced)

All ten rates and next-decision dates were freshly re-checked directly against each bank's own site this edition; none contradicted the prior edition.[11][17][18] One new data point surfaced: Norges Bank held a forecast-free interim policy review on 5 November, keeping its rate at 4.50% — a previously untracked decision that reinforces rather than contradicts the standing "unchanged since 24 Sept" fact (Annex A).[17] Riksbank's vote-split minutes from its 4 November hike had not posted as of this window's close (due 10 Nov, 09:30 CET, after the window ends); Banxico's own site remained unreachable via yet another new failure signature, so its rate and vote split stay secondary-sourced only (Annex B).[18][20]

December 8-9 FOMC hike odds extended further rather than reversing: a fresh Polymarket Gamma-API pull (snapshot approx. 8:26pm ET 9 Nov) put a December-hike-specific market at approx. 77% and a broader "any hike by Dec 2026" market at approx. 82.5%, with a separate cut-odds market at just approx. 1%.[21] DeFi Rate's blended Kalshi/Polymarket aggregator read approx. 80% hike / 19% hold / 2% cut at the same snapshot.[22] Kalshi's own direct fetch failed again (HTTP 401, a new failure signature, 24th consecutive failure) and CME FedWatch timed out again (20th consecutive failure) — Annex B.

US government funding was re-confirmed directly against whitehouse.gov this edition: H.R. 6500 funds federal agencies through 11 December 2026, no shutdown in effect — an upgrade back to primary sourcing after last edition's one-edition dip.[23] The Section 301 178-product China tariff-exclusion lapse remains unresolved: the underlying notice is internally inconsistent (its DATES section states 11:59pm ET Monday 9 Nov; its own background text and a USTR release instead say "extended until November 10"), and no new USTR or Federal Register filing was found through this window's close, including via the Federal Register's developer API, attempted fresh this edition — Annex B.[24] Midterm-election certification status remains unconfirmed nationally; only state-level future certification deadlines (into mid-December) were found — Annex B.[25]

4. Commodities and FX

Instrument	Level	Chg	Note
WTI crude	$86.44	-4.83%	Iran de-escalation + OPEC supply surplus; Yahoo cross-check $86.31/-4.98%
Brent crude	$92.57	-5.85%	Same driver; Yahoo cross-check $92.10/-6.33%
Henry Hub nat. gas (NGZ6, Dec)	$3.201/MMBtu	+6.77%	Yahoo cross-check $3.213; no roll to NGF7/Jan yet
Gold futures	$4,148.32	+1.80%	Yahoo cross-check $4,141.30; Kitco spot unavailable (Annex B)
Silver futures	$53.458	+2.92%	Yahoo cross-check $53.515; Friday base itself disagreed narrowly across vendors (Annex A)
COMEX copper	$6.3790/lb	+2.27%	Yahoo cross-check $6.386
LME copper, cash	$14,030.00/t	+0.54%	westmetall.com[28]; lme.com direct remains blocked (HTTP 403)
LME copper, 3-month	$13,855.00/t	n/a	Friday base not independently reconfirmed this session[28] — level only (Annex A)
DXY (Yahoo DX-Y.NYB)	101.66	-0.63%	Investing.com proxy agrees closely: 101.69/-0.60%
EUR/USD	1.1224	+0.72%	
GBP/USD	1.3441	+0.68%	
USD/JPY	157.91	-0.36%	
2-year Treasury	4.56%	+5bp	
10-year Treasury	4.88%	+2bp	
30-year Treasury	5.26%	flat	

Oil's decline has a genuine, named catalyst: Trump indicated further US strikes on Iran were "highly unlikely" while talks continue, easing Hormuz fears, while a Reuters-reported OPEC survey showed October output up approx. 1.38 million bpd m/m, reinforcing an estimated approx. 1.4 million bpd surplus.[26][30] Changes above are computed settle-to-settle from each vendor's own closes rather than its displayed change field, which diverged by 20-80bp across most instruments this edition (Annex A).[26][27] Treasury yields firmed modestly even as oil cratered and equities rallied — more consistent with the hawkish December-odds repricing (Section 3) than a disinflation trade.[29]

5. Derivatives, volatility and positioning

The VIX complex fully un-inverted. VIX fell 22.3% to 19.92, VIX9D fell 26.9% to 19.88, VIX3M fell 15.2% to 20.85, VIX6M fell 10.0% to 22.22, VVIX fell 19.3% to 98.43 and SKEW eased 2.1% to 150.34, per CBOE's delayed-quotes feed (same-day timestamps confirmed; both known bugs absent, manual recalculation matching the feed exactly — Annex A).[31] The curve (VIX9D 19.88 < VIX 19.92 < VIX3M 20.85 < VIX6M 22.22) is clean ascending contango, fully resolving Friday's mixed shape and Thursday's inversion in two sessions. SKEW's more modest easing leaves tail-risk pricing somewhat rich.

No new CFTC Commitments of Traders report fell inside this window; the latest (Tuesday 3 Nov data, released Friday 6 Nov) was fully summarized last edition. CFTC's release-schedule page lists November dates as the 6th, 16th, 20th and 30th — no 13 November release, correcting the prior working assumption; next report due Monday 16 November, covering Tuesday 10 Nov data.[32] Funding showed no stress: Friday's fixings (EFFR 3.88%, SOFR 3.89%, OBFR 3.88%) sat inside the 3.75%-4.00% corridor; Monday's ON RRP take-up was a negligible $252m.[33] Dealer-gamma sources remained unusable, each via a different failure signature than last edition (Annex A); no name produced a chartable implied-vs-realized figure, so no third chart.

6. The day ahead

Date	Event	Consensus / context
Tue 10 Nov	US CPI (October), BLS, 8:30am ET	No independently-verified consensus found this edition — secondary aggregators gave mutually contradictory figures and were discarded (Annex B)
Tue 10 Nov	Riksbank minutes (4 Nov decision), 09:30 CET	Vote-split detail from the 4-Nov hike remains unconfirmed
Tue 10 Nov	US 10-year Treasury note auction	$42bn
Mon 9 – Tue 10 Nov	Section 301 178-product China tariff-exclusion lapse	Notice internally inconsistent on the operative date (11:59pm ET Mon 9 Nov vs. "Nov 10"); unresolved through this window's close

Wed 11 Nov	Veterans Day	Equities open, bond market closed (confirmed)
Thu 12 Nov	US 30-year Treasury bond auction	$25bn
Fri 13 Nov	US PPI (October), BLS, 8:30am ET	No independently-verified consensus found
Mon 16 Nov	Next CFTC Commitments of Traders report (covers Tue 10 Nov data), 3:30pm ET	Corrects the prior edition's assumption of Fri 13 Nov — CFTC's own schedule lists 6/16/20/30 Nov
Mon 16 Nov	Q3 2026 13F filing deadline	45 days after the 30 Sept quarter-end rolls from Sat 14 Nov — corrects the prior assumption of "approx. 14 Nov"

Sector setup we take into Tuesday's session

- **Energy:** watch whether Monday's oil-price crash extends or stabilizes — a bounce is the first test of whether it was a one-day repricing.
- **Technology/semiconductors:** watch whether AMD and Intel hold their newly-regained pre-selloff levels, and Nvidia for any fresh Huang/Megaspeed development — it is now the lone laggard in a rallying sector.
- **Broad market:** October CPI (Tue, 8:30am ET) is the next hard data point for firming December hike odds (approx. 77-82%); a hot print reinforces the repricing, a soft one could reverse it as sharply as Friday's move did.
- **Trade policy:** watch for the Section 301 lapse resolving either way, and any retroactive duty resumption.

Annex A — Assumptions, corrections and status

- Index closes sourced to AP's wire via a WTOP.com mirror; CNBC's blog corroborated direction/magnitude but gave S&P +2.4% vs. AP's +2.3%, a rounding-level discrepancy disclosed.
- QQQ's ETF-proxy move (+3.54%) ran hotter than the Nasdaq Composite's reported +2.7%, plausibly QQQ's heavier chip weighting outweighing Nvidia's decline — not independently confirmed, disclosed as an unresolved tracking gap.
- Sector-ETF closes (11 of 11 higher) are single-sourced to stockanalysis.com this edition; a MarketWatch/WSJ cross-check could not be fetched.
- Every commodity/FX % change above was computed settle-to-settle from each vendor's own two closes rather than its displayed change field, which diverged by roughly 20-80bp across most instruments this edition — a new, systematic data-quality flag.
- Investing.com's own DXY-proxy Friday figure revised from the logged 102.179 to 102.30 on fresh re-pull, now matching Yahoo's DX-Y.NYB exactly — a genuine vendor revision.
- Silver futures' Friday base disagreed narrowly across vendors on re-pull (Investing $51.942, unrevised; Yahoo $51.803), though neither revised against its own prior reading.
- LME copper's 3-month Friday figure could not be re-confirmed this session (westmetall.com returned only the latest date regardless of query parameters); Monday's level is reported alone.
- The CBOE feed's two known bugs (duplicated prev_day_close; price_change_percent dividing by the wrong base) were absent on all six series this edition; manual recalculation matched exactly.
- Norges Bank held a forecast-free interim policy review on 5 November 2026, keeping its rate at 4.50% unchanged (confirmed directly against norges-bank.no) — a previously untracked decision point that reinforces, rather than contradicts, the standing "unchanged since 24 Sept" fact; next full decision remains 17 December 2026.
- US government funding status was re-confirmed directly against whitehouse.gov — back to primary sourcing after last edition's one-edition dip to secondary-only.
- Kalshi failed again (24th straight), via a new signature — HTTP 401, not 429. SpotGamma's block also changed — an auth-wall redirect, not the prior Cloudflare 403.
- A circulated claim of a formal Nvidia board investigation into CEO Huang on 8 Nov, incl. a staff apology email, could not be corroborated by any dated wire/filing and is not reported as fact; the 29 Oct NYT/FT story (Section 2) is cited instead.
- CFTC's release schedule and the Q3 13F deadline calculation both correct a forward-looking spec assumption (Section 6); neither was previously asserted to readers as fact, so no correction box applies.

Annex B — Data points sought but not verified this edition

- Kitco's historical gold/silver spot-close pages remain fully inaccessible — a fifth distinct problem mode in five editions (redirect-to-live-quote-only, no retained past-date close); no Kitco spot figure reported.
- No analyst action tied to a named analyst/firm and a specific stock could be independently verified for Monday's session — a third consecutive edition with none verifiable.
- October 2026 US CPI's consensus figure could not be independently verified; secondary aggregators returned mutually contradictory numbers (roughly 2.7%-3.7%) and were discarded.
- Official CME FedWatch probabilities: blocked again (timeout), a 20th consecutive failure.
- Kalshi's rate-odds market: blocked again (HTTP 401 this edition), a 24th consecutive failure.
- Dealer gamma (zerogex.io, SpotGamma): both remain fully unusable for structured data this edition (see Annex A for the specific failure modes).
- Banxico's primary site remained unreachable via yet another new failure signature (redirect to a now-live-but-404ing mirror whose root returns HTTP 403); its rate/vote split stay secondary-sourced only.
- The Section 301 178-product China tariff-exclusion lapse remains unresolved — no new USTR or Federal Register filing was found through this window's close, including via the Federal Register's own developer API, attempted fresh this edition.
- Midterm-election certification status remains unconfirmed nationally; only state-level future certification deadlines were found.
- Riksbank's 4 Nov vote-split minutes had not posted as of this window's close (due 10 Nov, after the window ends); no single dominant earnings name produced a chartable implied-vs-realized options-move figure (optionslam.com returned data, but nothing tied to Monday's largest movers) — both carried to the next edition.
