

Daily Economic Briefing

Monday, 7 September 2026 | Edition 15 | Window: Friday 4 Sept 2026 close/after-hours through the weekend (Sat 5 – Sun 6 Sept), plus Monday 7 Sept Labor Day market closure | Research cutoff approx. 00:20 UTC, 7 Sept 2026

Assumptions, corrections and scheduler status

Scheduler healthy — eighth consecutive clean fire. Trigger fired once at 2026-09-07T00:08:24Z, approx. 8 minutes after its 00:00 UTC slot; no duplicate, no gap.

US markets are closed today (Labor Day) — there is no Monday trading session to report. This edition covers Friday 4 Sept's full session and after-hours, plus the weekend, and previews Tuesday 8 Sept's reopen.

Fed Chair Kevin Warsh re-verified fresh via federalreserve.gov's own Board of Governors biography page [19] — unchanged.

Resolved: copper's long-open 2026 all-time-high question — best-supported figure is \$6.7270/lb, set 25 Aug 2026, corroborated by three independent sources [32,33,34]; the previously-floated \$6.7775 and \$6.83–6.88 candidates could not be re-confirmed and are retired.

Minor date correction: GitLab's post-earnings pop (+10.9%) occurred Wednesday 2 Sept, not Thursday 3 Sept as an open thread had assumed [5].

Data conflict disclosed and resolved: one Friday VIX read (14.32) traced to a mislabeled Thursday snippet; CBOE's own feed (fresh timestamp) plus two independent wires confirm Friday's VIX closed 14.53 [45,46]. FICO's Friday decline is disclosed as a range (approx. -15% to -21%) given a genuine cross-vendor spread [7,9]; Sept-16 FOMC odds are likewise disclosed as a range given a live cross-venue conflict [15,16,17,18].

Per the standing Delivery revision (17 Aug), this PDF is delivered in-session via SendUserFile only; no GitHub/Telegram step. Admin note: the trigger's own stored prompt still contains the retired GitHub/Telegram Step 5 language, unchanged since edition 6 (nine editions running) — holding per edition 9's judgment call, not re-escalating without a fresh signal from Alex.

60-SECOND READ

- Payrolls blew past consensus but stocks fell and rate odds barely moved net. August nonfarm payrolls rose +162,000 versus consensus clustered near 53,000–58,000 — roughly triple expectations — with unemployment steady at 4.1% and June/July revised up a combined 55,000 [14]. Equities fell anyway (good-news-is-bad-news for a Fed that was leaning dovish), and Sept 16 hike odds spiked intraday before settling back to roughly a coin flip by the weekend [15,16,17] — Thursday/Friday's CPI and PPI prints are now seen as the more decisive input.

Lululemon collapsed -17.4% to \$100.61 on a guidance slash (FY26 revenue guide cut to -5% to -7%) and a stock now down more than 51% year-to-date; new CEO Heidi O'Neill (ex-Nike) is not expected to show turnaround signs before H2 2027 [2,6].

Iran/Hormuz escalated sharply over the weekend. US forces struck and disabled three Iranian oil tankers after Iranian ballistic-missile launches at a US destroyer and carrier (both evaded); Iran is threatening to declare a new "restricted zone" outside the Strait. Brent crude closed Friday at a six-week high of \$96.28 [23,24,28].

The AI-capex trade forked again. Memory and AI-infrastructure names extended Thursday's Nvidia/Hugging Face rally — SanDisk +11.9%, Astera Labs +9.75% — while software fell hard on idiosyncratic misses: Guidewire -19.9% on weak FY27 guidance, UiPath -16.6% on a competitive downgrade citing the Salesforce-Anthropic partnership, and FICO fell an estimated 15-18% after regulators moved to end its mortgage-scoring exclusivity [5,7,10,13].

Markets are closed today for Labor Day. Canada's approx. \$27.6bn retaliatory tariffs take effect at Tuesday's reopen [22], and August CPI (Fri 11 Sept) — not this window's payrolls beat — now looks like the more decisive input into the 16 Sept FOMC decision [26].

1. MARKET RECAP

S&P 500	Dow Jones	Nasdaq Comp.	Russell 2000	VIX	10Y UST
7,718.60	53,414.25	26,506.99	2,975.65	14.53	approx. 4.78%
-0.38%	-0.51%	-0.29%	+0.25%	+1.45%	+1.8bp

US equities fell Friday as a much stronger-than-expected August jobs report revived Fed rate-hike bets a day after Governor Waller's dovish Reuters NEXT remarks had pushed odds the other way [3,4]. All three sectors that advanced — Technology, Industrials, Utilities — did so behind the memory/AI-infrastructure trade; Consumer Discretionary was the session's weakest sector as Lululemon's guidance cut and Tesla's Cybercab-event letdown weighed [5]. Small-caps were the lone bright spot, with the Russell 2000 the only index to close higher, helped by a smattering of value/cyclical earnings beats. For the week, the S&P was roughly flat (+0.1%), the Nasdaq the best performer (+0.4%); year-to-date the Russell 2000 remains the standout at +19.9% [1]. Ten-year Treasury yields rose to approx. 4.77-4.78% and two-year yields to approx. 4.37% — a fresh cycle high — on the payrolls beat [3,4]; the official Treasury H.15 par-yield print for Friday will not post until Tuesday given Monday's holiday.

2. EQUITIES AND EARNINGS

Sector rotation, Friday 4 Sept (SPDR sector-ETF proxy, same-day closes)

XLK Tech	+0.70%	XLI Industrials	+0.41%	XLU Utilities	+0.12%	XLB Materials	-0.34%
XLRE Real Estate	-0.72%	XLF Financials	-0.79%	XLE Energy	-0.87%	XLP Staples	-0.80%
XLV Health Care	-1.04%	XLC Comm. Svcs	-1.19%	XLY Cons. Disc.	-1.33%		

Source: Stockanalysis.com SPDR sector-ETF closing prices [5]. Precise NYSE/Nasdaq breadth ratios for Friday could not be independently confirmed (a widely-circulated 1.98:1 advance/decline figure traced to a source that itself flagged Thursday-dated volume — treated as unreliable and excluded; see Annex A).

Lululemon (LULU) -17.38% to \$100.61 — Q2 net revenue fell 4% y/y to \$2.4bn; Q3 guide of \$2.29-2.32bn implies approx. -10% y/y; FY26 guide cut to -5% to -7% revenue. UBS cut its PT to \$106 from \$120 (Neutral); Wells Fargo cut to \$95 from \$105, saying it doesn't "see a credible Bull case for shares today" [2,6]. **Guidewire Software (GWRE) -19.93%** to \$162.42 on weak FY2027 revenue/ARR guidance (\$1.707-1.727bn revenue, \$1.45-1.46bn ending ARR) despite a solid FY26 [5]. **UiPath (PATH) -16.63%** to \$15.19 despite a beat (revenue +13% y/y to \$410mn) — Canaccord Genuity downgraded Buy → Hold on intensifying AI-agent competition from the Salesforce-Anthropic partnership [10]. **FICO approx. -15% to -18%** (sources range -15.3% to -21%, disclosed as a range) after the FHFA director ordered Fannie Mae/Freddie Mac to accept VantageScore alongside FICO, ending FICO's mortgage-scoring exclusivity and alleging FICO raised costs 1,800% since 2020; mortgage is over 60% of FICO's Scores-segment revenue [7,8,9]. **Oxford Industries -17.7%** on an FY26 guidance cut citing weakness at its Lilly Pulitzer brand plus

broader consumer-discretionary pressure^[11]. **Tesla (TSLA)** -5.92% to \$354.08 as its invite-only Cybercab event disappointed (no pricing, production or regulatory detail) and NHTSA opened a same-day safety audit into Tesla's self-certification of Cybercab's exemption from standard safety equipment^[12].

On the upside, the memory/AI-infrastructure trade extended Thursday's Nvidia-Hugging Face-acquisition reaction: **SanDisk (SNDK)** +11.90% to \$1,740.00 on continuing "AI memory trade" flows — Dell's fiscal Q2 call had flagged DRAM/NAND as the binding AI-server constraint, and global NAND revenue rose approx. 70% q/q in Q2^[13]; **Astera Labs (ALAB)** +9.75% and **Semtech (SMTC)** +9.22% rode the same theme (Semtech's company-specific catalyst could not be independently confirmed — thematic read only)^[5]. **AMC Entertainment** +4.33% on the launch of a new low-risk film-distribution arm, "Leewood Films" (no releases before 2027)^[5]. Tanker/shipping names firmed on DHT Holdings' record Q2 (EPS \$1.23 beat \$1.14 cons., revenue \$284.8mn beat) — DHT +3.37%^[3].

Open threads resolved: GitLab's +10.9% post-earnings pop (Q2 revenue \$286.3mn +21.3% y/y beat, FY guide raised) is now dated to Wednesday 2 Sept, not Thursday as previously assumed^[5]. Planet Labs rose 6.32% to \$19.51 in Thursday after-hours trading on a Q2 beat (revenue \$116.05mn beat \$104.12mn cons.) with a narrower net loss; its Friday regular-session reaction could not be independently confirmed^[5]. August's full-month index performance: all three major indexes posted gains (S&P approx. +2.6%, Dow approx. +1.3%, Nasdaq approx. +3.9%, a lower-tier-sourced figure disclosed with that caveat)^[11].

3. MACRO, POLICY AND RATES

August nonfarm payrolls: +162,000 versus consensus near 53,000-58,000 (a roughly 3x beat); unemployment held at 4.1%; average hourly earnings +0.3% m/m / +3.1% y/y; labor-force participation rose to 61.6%. June and July payrolls were revised up a combined 55,000, with July flipping from an initially-reported -23,000 to +21,000^[14]. Sept 16 FOMC odds spiked intraday (Kalshi briefly to 56%) then settled back toward a coin flip by the weekend: Kalshi approx. 50-52% hike, Polymarket 51%, while one CME-tracking mirror showed a more hawkish approx. 58% against a same-day-dated 52.6% read elsewhere — disclosed as a genuine cross-venue conflict rather than forced to one number^[15,16,17,18]. No Fed speaker appeared over Friday or the weekend (confirmed directly against the Fed's own speech calendar)^[19]. BOE Governor Bailey's Friday LSE keynote and ECB Chief Economist Lane's Dublin remarks were both institutional/non-market-moving (central-bank-independence history and workforce-diversity respectively), carrying no rate guidance^[20,21].

Canada's approx. \$27.6bn dollar-for-dollar retaliatory tariffs (three tiers: 15%/25%/50%, covering steel, dairy, appliances, ag equipment, pulp/paper, electronics, lumber, textiles) take effect at 12:01am ET Tuesday 8 Sept — the day after this window closes, with no delay or carve-out reported^[22]. Separately, Canada reported a shock August payrolls loss of -41,700 versus +15,000 expected, a sharp divergence from the blowout US print that helped push USD/CAD higher into the weekend^[42]. BoJ Governor Ueda continued flagging upside inflation risk and a possible September hike (dated comments from 2-3 Sept, no fresh weekend developments found)^[43]. The Iran/Hormuz conflict escalated materially: US CENTCOM forces struck and disabled three Iranian tankers (near Kharg Island, Jask and in the Gulf of Oman) after Iran's IRGC fired ballistic missiles at a US destroyer and carrier, both evaded; a US admiral signalled a 3-for-1 escalation doctrine, and Iran's security council says it will declare a new "restricted zone" outside the Strait^[23,24,25] — oil-market detail in Section 4.

4. COMMODITIES AND FX

WTI \$91.48 +0.20%	Brent \$96.28 +0.80%	Gold \$4,476.60 -1.39%	Silver \$66.75 -1.41%	Copper \$6.68/lb +0.27%	DXY 99.18 +0.27%
---------------------------------	-----------------------------------	-------------------------------------	------------------------------------	--------------------------------------	-------------------------------

Oil settled at a six-week high Friday — WTI \$91.48 (+0.20%), Brent \$96.28 (+0.80%), corroborated across two independent wires^[27,28,24] — as the Hormuz "tanker war" entered its sixth month: the Strait has been effectively closed to normal commercial transit since late February, war-risk insurance is running approx. 40x pre-crisis levels, and US diesel hit a record \$5.85/gallon Friday^[24]. Gold fell 1.39% to \$4,476.60 and silver 1.41% to \$66.75 as the payrolls beat reversed Thursday's dovish, Waller-driven tailwind and lifted the dollar and yields; both metals firmed modestly over the weekend^[29,30]. Platinum eased 0.44% to approx. \$1,826^[35].

Copper's long-open 2026 record is resolved: the best-supported all-time high is **\$6.7270/lb, set 25 August 2026**, corroborated by three independent sources including a Trading Economics recap explicitly citing "the record-high of \$6.7 on August 25th"^[32,33,34]; the \$6.7775 and \$6.83-6.88 candidates floated in prior editions could not be re-confirmed. Friday's Comex settle of \$6.6825/lb (+0.27%) remains below that record; the persistent Comex-vs-LME premium (Comex approx. \$6.68/lb equivalent to approx. \$14,730/t vs. LME's actual \$14,405/t) continues to reflect US tariff-driven metal-siphoning into US warehouses rather than a data error^[31].

The dollar index rose 0.27% to 99.18, reversing an earlier Friday dip on Waller's dovish tone once payrolls printed hot^[36,37]. EUR/USD eased 0.10% to 1.1614; GBP/USD was roughly flat at 1.3523 after an intraday post-NFP low near 1.3482; USD/JPY rose 0.28% to 156.25 even as BoJ's Ueda continues to flag a possible September hike; USD/CAD rose 0.33% to approx. 1.3840-1.3862, widened further by Canada's own shock jobs loss^[38,39,40,41,42]. Bitcoin closed Friday at \$79,671.97, drifting modestly higher over the weekend to \$79,823.87 (Sat) and \$79,975.83 (Sun) — roughly flat to +0.4% for the weekend^[44].

Commodities & FX levels, Friday 4 Sept close

WTI	\$91.48	Brent	\$96.28	Gold	\$4,476.60
Silver	\$66.75	Copper	\$6.6825/lb	Platinum	approx. \$1,826
DXY	99.18	EUR/USD	1.1614	GBP/USD	1.3523
USD/JPY	156.25	USD/CAD	approx. 1.384	USD/MXN	16.9213
Bitcoin	\$79,671.97				

5. DERIVATIVES, VOLATILITY AND POSITIONING

VIX closed Friday at **14.53 (+1.45%)**, confirmed via CBOE's own delayed-quotes feed with a fresh Friday timestamp and cross-checked against two independent wires — resolving a Friday-dated 14.32 figure elsewhere that traced to mislabeled Thursday data^[45,46,4]. Notably, **all five related vol series carried genuinely fresh Friday timestamps this edition** — VIX3M 17.61 (+1.08%), VIX6M 19.89 (+0.55%), VIX9D 11.97 (+2.42%), VVIX 84.42 (+0.73%), SKEW 151.58 (+0.63%) — the first clean same-day sweep of the full curve in several editions, per-series staleness checked individually rather than assumed^[45]. The term structure (VIX < VIX3M < VIX6M) stayed in firm contango even as the hot payrolls print modestly lifted the whole curve.

CFTC's Commitment of Traders report, released Friday with data as of Tuesday 1 Sept, showed asset managers trimming ES (net +934,180, from +953,228) and NQ (+71,877, from +73,216) slightly while adding to RTY (+17,498, from +12,331); leveraged funds sharply covered Nasdaq shorts (net -14,092, from -41,232 — a approx. 27,100-contract reduction) while adding modestly to ES shorts (-317,564) and more meaningfully to RTY shorts (-109,499)^[47] — a rotation out of Nasdaq bearishness into incremental small-cap and S&P caution. Ahead of the print, SpotGamma had framed a "goldilocks" payrolls range of +20K-60K/4.1% unemployment as needed to avoid a hawkish repricing; the actual +162K print landed well outside that band, though a same-day dealer-positioning follow-up was not located^[48]. Friday options flow (Market Rebellion) showed elevated implied vol in Oracle (100, ahead of its 10 Sept print), Micron (64, call-heavy on a +4.5% day) and SanDisk (72, call-heavy); FICO's implied vol fell 17% to 52 on put-heavy flow amid the VantageScore news, with put activity concentrated in credit bureaus TransUnion and

Equifax^[49]. Funding was unremarkable: SOFR's most recent published print was 3.66% (trade-date 2 Sept, standard lag); ON RRP take-up was \$675mn Friday at the 3.50% award rate, down from Thursday's \$702mn and well below the 31 Aug quarter-end-adjacent \$6.73bn spike^[50,51]. No new Fed H.4.1 release fell in this window (next due Thu 10 Sept)^[52].

6. THE DAY AHEAD

US markets are closed today for Labor Day. At Tuesday's reopen, Canada's approx. \$27.6bn retaliatory tariffs take effect, and NFIB Small Business Optimism (Aug) and Consumer Credit (Jul) print. The week's more consequential releases land later: PPI Thursday and CPI Friday are now viewed as more decisive for the 15-16 Sept FOMC than Friday's payrolls beat, alongside University of Michigan's preliminary September sentiment read^[26]. The FOMC enters its blackout period ahead of the meeting.

Date	Event	Consensus / detail
Tue 8 Sept	NFIB Small Business Optimism (Aug); Consumer Credit (Jul); Canada tariffs (approx. \$27.6bn) effective	Not independently sourced this edition
Thu 10 Sept	Jobless claims (wk ended 5 Sept); PPI/core PPI (Aug); wholesale trade, existing home sales (Jul/Aug); Fed H.4.1	Cleveland Fed nowcast only; no survey consensus located ^[26]
Fri 11 Sept	CPI/core CPI (Aug) — the week's marquee release; UMich sentiment (prelim, Sept)	Cleveland Fed nowcasts approx. +3.38% y/y headline, approx. +2.38% y/y core — a model estimate, not a survey consensus ^[26]
Mon-Tue 15-16 Sept	FOMC meeting and decision	Cross-venue odds currently a near-coin-flip; disclosed as a range above

Sector setup we take into the reopen

- AI-infrastructure/memory names (SanDisk, Astera Labs) carry momentum from a second straight session of NAND/DRAM-scarcity-driven buying; Oracle's 10 Sept print (Sept-weekly IV already at 100) is the next test of AI-capex financing sentiment.
- Software is bifurcated: idiosyncratic guidance/competitive misses (Guidewire, UiPath) are being punished hard even where headline numbers beat, a pattern worth watching into the next earnings wave.
- Consumer discretionary remains under pressure (Lululemon, Oxford Industries, Tesla) heading into a week where CPI/PPI will matter more than company-specific news for the group's rate-sensitive names.
- Energy and tanker-adjacent names are levered to a still-escalating Hormuz conflict; Brent above \$96 with no de-escalation signal argues for continued two-way volatility risk into the reopen.
- USD/CAD is a live risk factor into Tuesday given both the Canada tariff implementation and Friday's Canadian jobs shock landing in the same week.

Annex A — Could not be verified this edition

- Precise NYSE/Nasdaq advance-decline breadth for Friday 4 Sept (a widely-circulated 1.98:1 figure traced to a source with apparent Thursday-data contamination).
- A single converged Friday VIX-close figure from non-CBOE sources (resolved internally via CBOE's own feed to 14.53; see disclosure box).
- A single converged FICO Friday decline percentage — reported sources ranged -15.3% to -21%; disclosed as a range.
- Exact national average Labor Day weekend gasoline price (source article inaccessible).
- Any weekend (Sat 5/Sun 6 Sept) M&A headline of note — none found despite multiple search angles.
- Oracle's precise FY27 Q1 earnings report date (referenced as "next week" but not pinned to an exact day this edition).
- Planet Labs' Friday regular-session close (only Thursday's after-hours reaction was confirmed).
- A single authoritative CME FedWatch snapshot with timestamp (two conflicting reads, 52.6% vs. approx. 58% hike, disclosed as a range).
- 30-year Treasury yield for Friday (5.243%, single-sourced, not independently cross-confirmed).
