

Assumptions & status check

Scheduler: single clean fire, 00:09:10 UTC (approx. 9 min after the 00:00 UTC slot) — no duplicate, no gap. Second consecutive normal fire following edition 8's fire-without-completed-edition anomaly (which edition 8 itself resolved by completing its catch-up normally). Standing facts re-verified fresh, unchanged: Fed Chair is Kevin Warsh; the 2026 Jackson Hole Symposium runs Thu–Sat 27–29 Aug, and Warsh's first keynote as Chair is tomorrow, Fri 28 Aug approx. 10:00am ET — it has not yet occurred as of this cutoff. Corrections/resolutions carried from prior editions: (1) Wed 26 Aug's VIX close, unavailable at edition 8's cutoff, is now confirmed at 15.21 (–1.55%); (2) the US–Canada tariff dollar figure left unreconciled across editions 7–8 (approx. \$20bn vs. approx. \$28bn) is now resolved — both the US's 22 Aug tariffs and Canada's 8 Sept retaliation are approx. \$20bn, multiply-corroborated; the approx. \$28bn figure appears to trace to an unrelated 2018 episode; (3) Coinbase/MARA's Monday 24 Aug moves, unconfirmed for two straight editions, are now resolved (single-sourced) at approx. –3.8% and approx. –0.7% respectively.

60-Second Read

- **Nvidia's beat-and-raise extended into Thursday's full session** (\$96.2bn revenue, \$108bn Q3 guide) — the stock closed +8.74% at \$227.98^[1], lifting the S&P 500 +0.72% and Nasdaq +1.57%^[2], but breadth was thin: Technology was the only S&P sector to advance at the close^[3].
- **SaaS earnings blew past expectations across the board:** Okta +26.9%, Salesforce +22.6%, CrowdStrike +20.5% and Veeva +16.4% all extended Wednesday's post-earnings pops through Thursday's close^[4] — the AI-capex earnings beat is not confined to chips.
- **Marvell fell approx. 7.5% after hours** despite record \$2.74bn revenue and an above-consensus Q3 guide, as gross margin slipped 90bp and chip-tariff-risk commentary on the call overshadowed the beat^[5].
- **Consumer earnings were the split-screen story:** Hormel –9.3% (guide cut)^[6], Wendy's –12.9% (Trian take-private chatter debunked)^[7] and Build-A-Bear –15.6% (guide cut)^[8] all fell even as tech roared — guidance caution persists outside AI-linked names.
- **Jobless claims beat** (203k vs. 208k cons.)^[9] kept the labour-market-resilience narrative alive; VIX fell to a fresh 2026 low of 14.51^[10] as event risk cleared. All eyes turn to Fed Chair Kevin Warsh's first Jackson Hole keynote, tomorrow 10am ET — still ahead as of this cutoff^[11].

1. Market Recap

S&P 500 7,730.99 +0.72% / +55.29 ^[2]	Dow Jones 53,569.44 +0.20% / +105.56 ^[2]	Nasdaq Comp. 26,541.35 +1.57% / +411.16 ^[2]	Russell 2000 3,014.34 +0.28% / +8.44 ^[2]
--	--	---	--

All four indices closed Thursday at fresh weekly highs, carried by Wednesday evening's Nvidia print flowing into the Thursday cash session. But the advance was narrow: Technology was the sole S&P sector to close higher, with an intraday snapshot showing ten of eleven sectors lower at midday, led down by Health Care, Utilities and Consumer Staples^{[3][12]} — a mega-cap/AI-concentrated rally, not broad risk-on. VIX fell to 14.51 (–4.6%), a fresh rolling 2026 low, as Nvidia's event risk cleared and Jackson Hole's Day 1 (no Chair remarks yet) passed without incident^[10].

2. Equities & Earnings

Nvidia extends the move; Marvell's beat isn't enough

Nvidia (NVDA) opened Thursday at \$222.86 and closed at \$227.98, +8.74% on the day (+\$18.32), on top of Wednesday's after-hours settle of +4.71% to \$219.53 — a cumulative move well beyond the approx. 5.6% weekly-straddle implied move priced ahead of the print and above NVDA's own trailing 8–12-quarter average realized move of approx. 7.4%^{[1][24]} (see chart, and Section 5). Q2 FY27 revenue was \$96.2bn (+106% y/y, beating \$92.07bn cons.), data-center revenue \$89.0bn (+117% y/y), and the Q3 guide of \$108bn (±2%) topped the approx. \$104bn Street view (already reported last edition) — Thursday's move reflects the market digesting the guide overnight and running the stock through dealers' approx. \$220 short-gamma trigger into the \$230 call-wall zone^[24]. Volume was approx. 294M shares, roughly double the 3-month average^[1].

Marvell (MRVL) reported Q2 FY27 after Thursday's close: revenue \$2.739bn (+37% y/y, a company record, beating approx. \$2.71bn cons.), non-GAAP EPS \$0.94 (in line with the \$0.93 guide midpoint), data-center revenue \$2.17bn (79% of sales). The Q3 guide came in above consensus on both lines (revenue midpoint \$3.15bn vs. approx. \$3.03bn cons.; non-GAAP EPS midpoint \$1.10 vs. approx. \$1.07–1.08 cons.) — yet shares fell approx. 7.5% after hours, from a \$241.45 regular close to \$223.05–\$223.27 by approx. 7:00–7:21pm ET^[5]. Non-GAAP gross margin fell 90bp sequentially to 58.0%, and same-day coverage tied the sell-off partly to chip-tariff-risk commentary on the call^[5] — rising R&D (\$741M) and compensation costs (\$326M) were also flagged as margin-pressure signals. Options had priced a approx. 10.6% implied move into the print, below the prior four-quarter average realized move of approx. 12%^[28]; the actual approx. 7.5% move fell inside that band.

SaaS mega-day extends Wednesday's earnings pops

Thursday's session confirmed the AI-capex earnings beat is broadening beyond chips: **Okta (OKTA) +26.9% to \$170.54** on accelerating cRPO growth (+14.1% y/y) and record non-Q4 bookings, alongside a same-day BofA upgrade (Underperform → Neutral); **Salesforce (CRM) +22.6% to \$252.05** and **CrowdStrike (CRWD) +20.5% to \$227.96** both extended Wednesday's after-hours gains (already reported as +11.4% and +11.7% AH last edition) through the full Thursday session; **Veeva Systems (VEEV) +16.4% to \$285.00** on a Q2 beat (revenue approx. 2.5% above consensus, R&D-subscription revenue +19%), called the stock's best day on record^[4].

Consumer staples & discretionary: guidance caution persists

Even as tech roared, consumer-facing earnings were broadly weak: **Hormel Foods (HRL) –9.3% to \$21.44** on a Q2/Q3 revenue miss (\$2.96bn vs. \$3.04bn est.), volumes –7.4%, and a cut FY sales guide (to \$12.1–12.2bn from \$12.2–12.5bn) despite an EPS beat^[6]. **Wendy's (WEN) –12.9% to \$7.87** after Reuters reported activist Trian Fund Management is not pursuing a take-private bid (Trian and affiliates hold approx. 16.2%), reversing a mid-August speculative rally; Q2 same-restaurant sales were –7.0%, adjusted EBITDA –15.4% y/y^[7]. **Build-A-Bear (BBW) fell approx. 15.6%** on a Q2 revenue miss (\$115.3M vs. \$121.27M est., –7.2% y/y) and a cut FY26 revenue guide (to \$500–525M from \$538.8M est.), with e-commerce demand –15.6% y/y^[8]. **Dollar**

General (DG) beat on both lines (revenue \$11.29bn vs. \$11.18bn est.; EPS \$2.48 vs. \$2.01 est.) and raised FY guidance, spiking approx. 12% premarket, but the rally faded hard intraday to close +2.53% at \$125.89 — a reminder that premarket prints are not closes^[6]. **Dollar Tree (DLTR)** **–1.3% to \$130.49** beat Q2 but only affirmed (didn't raise) full-year guidance amid macro uncertainty^[4].

Elsewhere in single stocks

- **Micron (MU)** opened Thursday +3.05% at \$967.01 on Nvidia-driven AI-memory read-through, but 82% of that gap collapsed within nine minutes; shares closed –0.48% at \$933.90 — a fade, not a follow-through^[32]. (Micron's own Wednesday-night after-hours move could not be independently confirmed with a percentage — carried to Annex A.)
- **AMD** closed –0.89% at \$476.67 Thursday, giving back a portion of a recent Street-high price-target run; the BMO Capital Outperform initiation cited in a prior edition as a Wednesday catalyst appears, per better-dated sourcing, to trace to Friday 21 Aug rather than Wednesday 26 Aug — flagged as a minor cross-edition date discrepancy^[33].
- **Coinbase (COIN) and MARA**, unresolved since edition 6's Monday 24 Aug open thread: COIN closed –3.76% at \$179.48 and MARA –0.71% at \$11.18 that session, per single-sourced historical price data^[30] — resolved and closed out as an open thread.
- Notable analyst actions Thursday: upgrades for Synopsys (Baird), Okta (BofA), Semtech (Northland), First Solar (BMO), Waters (Piper Sandler); downgrades for Celsius (Deutsche Bank), Deutsche Telekom (Kepler Cheuvreux), Abercrombie & Fitch (Citi), Regions Financial (Deutsche Bank), Novo Nordisk (Deutsche Bank)^[31].
- No qualifying (>3%) single-name mover was identified Thursday in large industrials or telecom specifically — flagged rather than forced; a full closing 11-sector GICS table remains unobtainable (persistent, Annex A).

3. Macro, Policy & Rates

Jackson Hole, Day 1: the 2026 Economic Policy Symposium (theme: "Financial Innovation: Implications for Payments and Policy") opened Thursday at the KC Fed's Jackson Lake Lodge venue; no Chair remarks are scheduled until Friday, and no market-moving Day-1 content was identified — Thursday's rally was earnings-driven, not Fed-driven^[11]. Fed Chair Kevin Warsh's first keynote as Chair is tomorrow, approx. 10:00am ET; markets are watching for reaction-function clarity (inflation vs. employment), any "AI-disinflation" framing, and Fed–Treasury independence signaling amid Bessent's ongoing bond-buyback programme.

Labour market: initial jobless claims for the week ended 22 Aug fell to 203,000 (vs. 208,000 cons., prior week revised to 207,000); continuing claims 1.778mn^[9]. The August Kansas City Fed manufacturing survey had not been located as published at cutoff — only July's reading (composite 17) is confirmed; carried to Annex A rather than estimated.

Fed balance sheet (H.4.1, week ended 26 Aug, released Thu 4:30pm ET): reserve balances \$2,924,936mn (down \$10,351mn w/w); TGA \$959,435mn (up \$5,823mn w/w); total assets \$6,730,912mn (down \$14,787mn w/w); reverse repos \$356,158mn total, of which foreign official/international \$361,883mn and the domestic ON RRP facility a negligible \$330mn^[13] — consistent with the New York Fed's own daily ON RRP operations data showing take-up of approx. \$456mn Thursday at the 3.50% award-rate floor^[27].

Rates: Sept 16 FOMC odds held essentially flat at approx. 68% hold / 31% hike (Polymarket/Kalshi, little changed week-on-week)^[14]. Treasury yields "eased" Thursday ahead of Friday's calendar and the Jackson Hole keynote per wire coverage, but an exact Thursday print was not yet posted at this cutoff (H.15/FRED carry a one-business-day lag); the last confirmed official 10-year print is 4.64%, Tue 25 Aug^[17].

Trade & sanctions: the US–Canada dollar figure is now reconciled at approx. \$20bn in both directions — the US's 50% tariffs on approx. \$20bn of Canadian goods took effect 22 Aug, and Canada's retaliatory tariffs on approx. \$20bn of US goods are set for 8 Sept^[15]. Treasury's "Operation Economic Outcast" Iran sanctions package (unveiled 24 Aug) saw no further developments in this window; oil had already fallen to a one-week low on 25 Aug as markets judged the package light on immediate enforcement teeth^[16].

4. Commodities & FX

Energy: WTI traded roughly flat-to-modestly-higher in the low \$82s (sources range \$81.85–\$82.90, a approx. \$1 spread, no exchange-confirmed settlement obtainable); Brent showed a wider \$86.12–\$88.88 range across three vendors with even the direction disputed^[18]. The Brent–WTI spread — a proxy for Hormuz war-premium — compressed to approx. \$4.75 from Monday's approx. \$7.16, consistent with the market judging Gulf disruption risk as easing, at least for now. Natural gas's Thursday close and EIA storage figure could not be verified this cycle (Annex A).

Metals: gold continued easing, trading in a approx. \$4,577–\$4,650 band (vendor snapshots disagree on level; direction and driver — dollar strength, elevated yields, Jackson Hole caution — are consistent across sources), down from Tuesday's 15-week high near \$4,700^[20]. Silver held roughly flat near \$68^[21]. Copper extended its retreat from Wednesday's fresh intraday Comex record (\$6.775/lb), trading approx. \$6.56–\$6.61/lb Thursday (–0.03% to –0.5% depending on source) as US tariff-driven stockpiling ahead of a 2028 rate step-up continues to pull metal into US warehouses even as Chinese industrial-profit growth slows^[19]. Platinum's Thursday level could not be verified (Annex A).

FX: the dollar index firmed to approx. 99.1 (+0.2%), its highest since 19 Aug, as Wednesday's hot PCE print lifted Fed-hike bets^[22]. EUR/USD eased to approx. 1.165 from the week's approx. 1.171 high; USD/JPY approx. 159.2; GBP/USD approx. 1.359, near its weekly lows; USD/CAD approx. 1.386–1.388, with the loonie the weakest major currency this week (USD +0.53% w/w vs. CAD) amid the live tariff dispute^[22]. USD/MXN approx. 17.0, with the peso firm after Banxico raised its 2026 growth forecast to 1.5% (from 1.1%) while holding its policy rate at 6.50%^[23].

5. Derivatives, Volatility & Positioning

VIX closed 14.51 (–4.60%), a fresh rolling 2026 low, extending a two-session decline from Wednesday's 15.21 (–1.55%, itself now confirmed after being unavailable at the prior edition's cutoff) and Tuesday's 15.45^[10]. VIX3M eased to approx. 17.57 (single-sourced), putting the VIX/VIX3M ratio at approx. 0.826 — deeper contango than Wednesday's approx. 0.845, consistent with front-month event-risk (Nvidia) clearing faster than the sticky 3-month vol tied to Sept FOMC/Jackson Hole uncertainty. VVIX eased to approx. 83 (single-sourced, delayed-data read).

Nvidia's post-earnings move (see chart) exceeded both its approx. 5.6% pre-print weekly-straddle-implied move and its own trailing 8–12-quarter average realized move of approx. 7.4%, coming in at +8.74% cumulative (Wednesday's AH settle to Thursday's close)^{[1][24]} — SpotGamma had flagged the options market as likely underpricing the event beforehand, with dealers positioned short gamma above \$220 and heavy call open interest at \$230/\$240^[24]; the stock's move through both levels is consistent with a dealer-hedging squeeze. A precise before/after implied-vol print could not be sourced — only a qualitative "hard" IV crush is confirmed (Annex A).

No new CFTC Commitment of Traders data fell in this window: the next release (positioning as of Tue 25 Aug) is due Friday approx. 3:30pm ET^[26]. Funding was unremarkable: SOFR's most recently published print is 3.64% (Wed 26 Aug, standard one-day lag)^[27]; ON RRP award rate held at the 3.50% floor with take-up near-zero (approx. \$456mn Thursday)^[27]. Into Friday's keynote, SPX options positioning (SpotGamma, single-sourced) shows a gamma flip point near 7,780 (spot approx. 7,700, approx. 1.5% below the 13 Aug record close of 7,798.99) and SPX implied vol near approx. 14% — lower than the following week's Sept 4 payrolls print, i.e. markets are pricing the Fed Chair's speech as the lower-risk event of the two; deep out-of-the-money tail hedges were flagged as comparatively cheap^[25].

6. The Day Ahead

Friday 28 Aug's marquee event is **Fed Chair Kevin Warsh's first Jackson Hole keynote, approx. 10:00am ET** — the week's dominant catalyst, still ahead as of this cutoff. Also on the calendar: Chicago PMI for August (approx. 9:45am ET, consensus approx. 57.6, single-sourced); University of Michigan Consumer Sentiment, final August reading (timing and consensus figures showed cross-source inconsistency — use with caution); and a reported preliminary annual benchmark revision to nonfarm payrolls, with one aggregator circulating a consensus of approx. –911k that could not be independently corroborated by cutoff — flagged given the potential market sensitivity of a revision at that scale^[29]. CFTC CoT data (positioning as of 25 Aug) is due approx. 3:30pm ET. Marvell's actual post-earnings trade will continue to develop into Friday's open, with Thursday's after-hours read at approx. –7.5%.

Date	Event	Consensus / context
Fri 28 Aug	Fed Chair Warsh — Jackson Hole keynote (approx. 10am ET)	First as Chair; reaction-function & independence signals watched
Fri 28 Aug	Chicago PMI (Aug)	approx. 57.6 cons. (single-sourced)
Fri 28 Aug	CFTC CoT (data as of 25 Aug)	approx. 3:30pm ET release
Fri–Sat 28–29 Aug	Jackson Hole Symposium, Days 2–3	Panel sessions on payments/fintech theme
Fri 5 Sept	August nonfarm payrolls	Next major labour print
Tue 8 Sept	Canada's retaliatory tariffs take effect	approx. \$20bn of US goods
Wed 16 Sept	FOMC decision	approx. 68% hold / 31% hike priced

Sector setup we take into Friday:

- AI hardware vs. platform software is bifurcating post-earnings: SaaS names (Okta, Salesforce, CrowdStrike, Veeva) were rewarded broadly, while hardware/semis with any blemish (Marvell's margin compression, tariff-risk commentary) were punished despite beats.
- Consumer staples/discretionary guidance cuts (Hormel, Build-A-Bear) and a broken take-private thesis (Wendy's) argue for continued caution on consumer-facing names even as claims data stays resilient.
- Vol is priced for a benign Jackson Hole: SPX implied vol near 14% into Warsh's speech is below what's priced for the Sept 4 payrolls print — a hawkish surprise carries asymmetric upside risk to VIX off a fresh 2026 low.
- CAD remains the weak link in G10 FX on the live US–Canada tariff dispute, with Canada's 8 Sept retaliation date now the next hard checkpoint; gold's pullback from 15-week highs reads as dollar strength into Jackson Hole, not a change in the safe-haven bid.

Annex A — Could Not Verify

- August Kansas City Fed manufacturing survey composite — not located as published at cutoff; only July's reading (17) confirmed.
- Exact Thursday 27 Aug Treasury yield closes (2Y/10Y/30Y) — official H.15/FRED carry a one-business-day lag; only directional "eased" confirmed.
- Exchange-confirmed WTI/Brent settlement for Thursday — vendor snapshots disagree by up to approx. \$1 (WTI) and approx. \$2.75 (Brent); no CME/ICE print obtained.
- Thursday natural gas close and EIA storage build/draw figure — not located this cycle.
- Platinum's Thursday level — not located.
- Single authoritative gold/silver settlement — vendor snapshots range approx. \$4,577–\$4,650 (gold); one outlier silver reading (approx. \$65.59) discarded as inconsistent with two better-sourced reads (approx. \$68).
- Exchange-confirmed copper settlement — vendor/wire snapshots only, as in all prior editions.
- Exact DXY/FX closing ticks beyond the approximate levels cited — intraday/near-close reads only.
- VIX3M and VVIX Thursday closes — each single-sourced, not independently corroborated by a second vendor.
- Precise before/after NVDA implied-volatility print around the earnings crush — only a qualitative "hard IV crush" is confirmed in sourcing.
- QQQ dealer-gamma/GEX commentary into Friday's keynote — not found; only SPX-level commentary (SpotGamma, single-sourced) obtained.
- Micron's isolated Wednesday-night after-hours percentage move — only Thursday's opening gap-fade sequence is documented.
- Exact date of AMD's BMO Capital Outperform initiation — two sources disagree (21 Aug vs. 26 Aug); a prior edition's Wednesday attribution may be a date-confusion artifact.
- Full closing 11-sector GICS performance table and official closing market breadth — persistently unobtainable at close across all nine editions; only intraday/mid-session snapshots available.
- Official CME FedWatch probabilities (page blocks automated fetching) — secondary trackers (Polymarket/Kalshi) used instead, given as a range.
- University of Michigan Consumer Sentiment (final, Aug) release time and consensus figure — cross-source inconsistency on both; treat Section 6's figures as indicative only.
- Preliminary annual benchmark revision to nonfarm payrolls consensus (approx. –911k circulated on one aggregator) — could not independently corroborate with a second named source.
