

Status box — scheduler, corrections and resolved items this edition

- **Scheduler healthy, seventh consecutive clean fire.** Single fire at 00:09:13 UTC, approx. 9 minutes after the 00:00 UTC slot — no duplicate, no gap.
- **Fed Chair re-verified fresh: Kevin Warsh, unchanged.** Confirmed via his own Jackson Hole keynote text still posted under his name as Chairman on federalreserve.gov.^[50]
- **Resolved this edition: the US-Canada tariff dollar figure.** Canada's Department of Finance backgrounder confirms the approx. \$27.6bn figure flagged as "reopened" last edition is correct and current — it is calculated dollar-for-dollar against the US's own approx. \$27.6bn Section 338 tariff on Canadian goods (effective 22 Aug). The earlier approx. \$20bn read was a superseded preliminary estimate, not a live conflict.^[30]
- **Resolved this edition: Tuesday's VIX3M close.** CBOE's feed carried only a stale mid-afternoon 18.34 print for Tuesday last time; Wednesday's feed retroactively confirms Tuesday settled at 18.33 via its own previous-close field.^[44]
- **Live data conflicts disclosed as ranges, not forced to a figure, per house rules:** WTI, Brent, gold, silver, copper, platinum, DXY, USD/CAD and USD/MXN all carried genuine multi-vendor spreads on their Wednesday close — see Section 4 and Annex A.
- **Still unresolved for a third consecutive edition:** Bitcoin's session close (see Annex A).

60-second read

- **Iran/Hormuz war escalated further, oil didn't follow through.** Iran struck at US allies Kuwait and Bahrain and a US strike hit a wedding in Kuhestak, Iran (Iranian state media: 4 killed, 68+ wounded); the Strait remains largely closed to shipping.^[35] Yet WTI and Brent, having spiked to approx. \$91.67 and approx. \$96-97 overnight, pulled back to close roughly flat to modestly higher on Trump's comment that the strikes would be "brief" — a war still live but no longer the tape's dominant driver.^{[36][37]}
- **AI-capex names split on the same night's earnings.** Dell closed +15.81% on a record approx. \$95bn AI-server backlog and a \$25bn FY27 guidance raise^{[5][6][7]}; Snowflake jumped approx. +21-22% after hours on accelerating product-revenue growth^[15]; but Broadcom, despite an in-line beat-and-raise, fell as much as approx. 6% (settling near approx. -3.5%) after hours because its approx. \$34.8bn Q4 guide landed just under the approx. \$35.05bn buy-side whisper^[13] — a reminder that in this tape a beat needs to clear the whisper number, not just consensus.
- **VIX collapsed approx. 7% to 15.20 even as the war stayed hot,** and the VIX/VIX3M ratio steepened to approx. 0.855 from Tuesday's approx. 0.891^[44] — vol sellers are treating Wednesday's rally as durable, not a dead-cat bounce against a live geopolitical risk.
- **ADP badly missed (+38K vs. +47K cons., weakest since January) and equities rallied anyway^{[23][24]}** — a labor wobble the market shrugged off, which raises the stakes on Friday's nonfarm payrolls (cons. approx. +58K, unemployment steady at 4.1%) as the print that could finally move Sept-16 hike odds, currently stuck in a wide high-50s-to-high-60s% band across CME/Polymarket/Kalshi trackers.^{[27][33]}
- **High-multiple software is still being repriced even as hyperscaler-capex names get rewarded.** Palo Alto Networks -9.28% (NGS ARR growth read as optically flat y/y despite a 34% revenue beat)^{[8][9][10]} and MongoDB -13.54% (a strong beat-and-raise overshadowed by a Q3 guide read as a sharp deceleration)^{[11][12]} — a bifurcation between "AI infrastructure demand" and "SaaS growth durability" stories worth watching into next week's software prints.

1. Market recap

S&P 500 7,666.60 +35.13 (+0.46%)	Dow Jones 53,061.95 +295.07 (+0.56%)	Nasdaq Comp 26,217.83 +118.05 (+0.45%)	Russell 2000 2,953.17 +33.03 (+1.13%)	VIX 15.20 -1.14 (-6.98%)	10Y UST approx. 4.78% high 4.814% intraday
---	---	---	--	---------------------------------------	---

All four major indices closed higher Wednesday, breaking a downbeat start to the week, on gains in big technology names and steadier oil/yields.^[1] A second, independent recap (Investrade) confirms the same closing levels to the point (S&P +0.46%, Dow +0.56%, Nasdaq +0.45%, Russell +1.13%), and the day's arithmetic reconciles exactly against Tuesday's already-confirmed 7,631.47 S&P close — ruling out a stale-data trap that briefly surfaced on two other pages that carried a lower, unlabeled intraday snapshot under the same date.^{[1][2]} Nvidia (+3.21%) was cited by AP as the single largest tech contributor to the index gain.^{[1][4]} Sector breadth was broad: 9 of 11 S&P sectors closed higher on a same-day SPDR sector-ETF proxy read, Materials (XLB +1.69%) and Communication Services (XLC +1.39%) the leaders, Real Estate (XLRE -0.70%) the lone clear laggard and Technology (XLK -0.02%) roughly flat despite Nvidia's gain — see chart below.^[3] NYSE advance/decline counts could not be sourced for the session (Annex A).

2. Equities and earnings

Tuesday-after-close prints, settled in Wednesday's session

Dell (DELL) +15.81% to \$492.20^{[5][6][7]} — fiscal Q2 FY27 revenue approx. \$47.0bn (+58% y/y), adj. EPS \$7.04 (+203% y/y), a record approx. \$95bn AI-server backlog (approx. \$60.9bn in new AI orders this quarter alone), FY27 revenue guide raised by \$25bn to \$192bn, AI-server revenue guided to triple to \$74bn. Truist raised its target to \$505 but kept a Hold ("lack of material upside"); BofA also moved to \$505 (Buy). Read-across: HPE +1.89% and Super Micro +0.79% in the regular session — muted next to Dell's YTD +241% vs. S&P's +25% YTD, per 24/7 Wall St's framing.

Palo Alto Networks (PANW) -9.28% to \$328.48^{[8][9]} (on top of Tuesday's -5.24%) — fiscal Q4 revenue \$3.41bn (+34% y/y, beat), non-GAAP EPS \$1.02 (beat), but NGS ARR \$9.1bn (+63% y/y) landed just under the approx. \$9.15bn buy-side bar; FY27 guide \$14.1-14.2bn revenue / \$4.16-4.19 EPS. Closed its Console (agentic AI) acquisition. Baird held Outperform at a flat \$420 PT; DA Davidson raised its target to \$420 while flagging NGS ARR growth as "appears

approximately flat y/y" — the core investor worry. Sector read-through was contained: CrowdStrike -3%, Fortinet -3%, the HACK ETF only -2%, read as an isolated repricing of Palo Alto's own premium multiple rather than a group-wide reset.

MongoDB (MDB) -13.54% to \$375.40^{[11][12]} — Q2 FY27 revenue \$771.8-772m (+30% y/y, beat by \$38m), adj. EPS \$1.90 (beat \$1.61 est.), Atlas +29% y/y (73% of revenue), FY27 guide raised to approx. \$3.0bn revenue / approx. \$6.49 EPS (still ahead of the approx. \$2.96bn/\$6.13 prior consensus) — yet a Q3 guide implying approx. 21% revenue growth / approx. 20% EPS growth, a sharp deceleration from the quarter just posted, drove the sell-off. UBS cut to Neutral (PT \$460 to \$410, "not yet seen material pull-through from AI"); RBC Capital cut its target to \$465 but stayed Outperform ("would be buyers on the weakness").

Reported Wednesday, after Wednesday's close (within window)

Broadcom (AVGO) — Q3 FY26 revenue \$29.591bn (+86% y/y, beat), non-GAAP EPS \$3.32 (beat); AI semiconductor solutions \$20.839bn (+127% y/y, 70% of revenue). Q4 guide approx. \$34.8bn revenue (+93% y/y) landed just under the approx. \$35.05bn whisper number despite being a beat-and-raise on paper; shares fell as much as approx. -6% after hours, settling near approx. -3.5%.^[13] **Snowflake (SNOW)** — product revenue \$1.49bn (+37% y/y, a third straight quarter of acceleration), FY27 product-revenue guide raised to \$6.07bn (+36%), operating-margin guide raised to 14.5% from 13.5%; shares surged approx. +21-22% after hours to a fresh high, having sold off approx. 4% intraday into the print on elevated (approx. 96% implied beat-probability) expectations.^{[14][15]} **Hewlett Packard Enterprise** beat and raised (Q3 revenue \$12.21bn vs. \$11.91bn est.; adj. EPS \$1.11 vs. \$0.93 est., a approx. 19% beat; FY26 guide to \$45.96-46.99bn/\$3.75-3.85) yet fell modestly after hours (approx. -0.6% to -1%) on no clear stated reason beyond valuation after a large pre-print run.^[16] Also after hours: NetApp -7% (sell-the-news despite raised guidance); Netskope +16% (beat, raised FY27 revenue guide); ChargePoint +16% (narrower loss); Five Below +3% (raised FY sales outlook); Tilly's +32% (blowout beat); PVH -3% (bottom-line beat, guide below consensus on European softness).^[13]

Other single-stock movers, Wednesday regular session

GitLab +9.98% to \$49.59^[17] settling down from Tuesday's after-hours pop on a Q2 beat-and-raise (EPS \$0.24 vs. \$0.18 est.; revenue \$286.25m vs. \$273.12m est., +21% y/y). **Credo Technology -20.04% to \$165.22**^{[18][19]} despite a beat — fiscal Q1 revenue \$479.0m (+114.7% y/y), non-GAAP EPS \$1.20 — the drop tied to shrinking gross margins, rising opex and a Q2 guide (\$525-535m) read by some as evidence the AI-networking growth story is cracking; Needham reiterated Buy (\$275 PT), Roth Capital raised its target to \$300. **Varonis +9.56% to \$46.40**^[20] on a Bloomberg-sourced report that Thoma Bravo-backed Proofpoint is in acquisition talks (no deal finalized). **Charter Communications +8.74% to \$158.97**^[21] on management reassurance after a CFO departure plus value-buying at a compressed multiple — not a sector move (telecom proxies were roughly flat). **Edison International -6.14% to \$55.19** and **PG&E -5.19% to \$13.33**^[22] extended the prior week's approx. 18-23% wildfire-bill plunge after PG&E scaled back capital spending and its CEO publicly pressed California to revisit the shelved liability-reform bill. **Reddit +9.31% to \$158.10** — the move is confirmed but its specific Wednesday catalyst could not be verified from a dated source (Annex A).

Single-stock movers, Wednesday 2 September 2026

3. Macro, policy and rates

Iran/Hormuz war escalated further over the window, not de-escalated. Fresh US strikes hit Iranian rocket launchers and, per CENTCOM, air-defense/radar/maritime targets; Iran retaliated by firing at US-linked positions in Kuwait and Bahrain, and a US strike hit a wedding in Kuhestak, killing 4 and wounding 68+ per Iranian state media. The Strait of Hormuz remains largely closed to normal traffic despite US claims flows have resumed; a Crisis Group analyst flagged rising full-scale-war risk.^[35] No new Iran-sanctions action ("Operation Economic Outcast") fell inside this window — the most recent tranche was dated 24-28 Aug; a General License wind-down authorization expires 8 Sept, the same day Canada's retaliatory tariffs take effect (below).

ADP employment (Aug) +38,000, below the approx. +47K consensus and the weakest ADP print since January; July was revised up to +46K from +44K.^[23] Goods-producing jobs fell 10K (manufacturing -17K) while services added 48K, led by education/health (+45K). Equities rallied through the miss — the move looked more tied to the Beige Book and yield stabilization than to ADP.^[24] **FOMC Beige Book** (2pm ET): activity "up modestly," 10 of 12 districts slight-to-moderate growth, 2 flat; contacts flagged "heightened uncertainty surrounding the effects of higher energy prices" — a direct line from the Iran shock into the Fed's own read of the economy.^[25] No Fed speakers fell in the window itself (Governor Barr's remarks were Tuesday, on a non-policy topic); the calendar was otherwise quiet.^[26]

Sept 16 FOMC hike odds: a genuine cross-venue spread persists — CME FedWatch-tracker reads via secondary sources ranged approx. 66-68% into Tuesday, Polymarket showed approx. 59% hike live Wednesday, and a Kalshi/Polymarket blended read came in near approx. 58%.^[27] Net: odds held roughly steady in a high-50s-to-high-60s% band across the window, with no clear directional break from the ADP miss — the official CME FedWatch page remains unreachable, so this is disclosed as a range rather than a single figure.

Treasury yields (secondary-market levels; official Treasury par yields/Fed H.15 lag a day, so treat as indicative): 10Y approx. 4.78% close, having touched an intraday approx. 4.814% high — the highest since November 2023, continuing the post-Jackson-Hole selloff; 2Y approx. 4.39%; 30Y approx. 5.26%.^{[28][29]} Japan's 10Y JGB stayed near its own multi-decade high, still pressuring global duration.

US-Canada tariffs — resolved. Canada's Department of Finance confirms its 8 Sept retaliatory tariffs apply to approx. \$27.6bn of US imports, calculated dollar-for-dollar against the US's own 50% Section 338 tariff on approx. \$27.6bn of Canadian goods (effective 22 Aug); the approx. \$20bn figure carried in recent editions was a superseded preliminary estimate.^[30]

Day ahead (Thu 3 Sept): ISM Services PMI (cons. 54.2, prior 54.1), S&P Global Services PMI (cons. 56.8) and Composite PMI (cons. 56.0), initial jobless claims (cons. approx. 205K), nonfarm productivity/unit labor costs, trade balance, and the Fed's H.4.1 balance-sheet release; Fed Governor Waller gives a Reuters NEXT "Economic Outlook" interview at 8:30am ET.^{[31][32]} **Friday 4 Sept:** nonfarm payrolls (cons. approx. +58K vs. July's -23K, unemployment rate expected steady at 4.1%) — the print most likely to move the still-wide Sept-16 odds spread — plus BoE Governor Bailey and ECB's Lane remarks.^[33] **Monday 8 Sept:** Canada's approx. \$27.6bn retaliatory tariffs take effect (US markets closed for Labor Day).

BoJ: Governor Ueda said markets "price in a high likelihood of a September rate increase" and that the BoJ wants to keep hiking given still-loose conditions.^[34] One dealer read (MUFG) puts a 25bp hike at the 18 Sept meeting as "now fully priced in," while another (BBH) puts only approx. 5% odds on a larger 50bp move despite a hawkish board member leaving it open — reported as a range given the spread between the two framings.^[34]

4. Commodities and FX

Oil: WTI and Brent spiked overnight on fresh US-Iran strikes (WTI to approx. \$91.67, Brent to approx. \$96-97) before fading through Wednesday's session on Trump's comment that the strikes would be "brief" and a larger-than-expected EIA crude draw; multi-vendor closes disagree — WTI approx. \$89.24-90.63 (roughly flat to +0.45%), Brent approx. \$94.01-95.29 (-0.68% to +0.67%).^{[36][37][38]} EIA's Weekly Petroleum Status Report (week ended 28 Aug, released Wed) showed crude stocks -4.5mn bbl to 424.5mn, gasoline +0.3mn bbl, and a further 3.1mn-bbl SPR release to 286.6mn bbl total.^[39] Natural gas was more consistently sourced at approx. \$2.94-2.95/MMBtu (+1.2% to +1.5%) on hot weather and LNG-export demand.^[37]

Precious/base metals — genuine multi-vendor Wednesday-close conflicts, disclosed as ranges per house rules: gold approx. \$4,357-4,385 (-0.4% to +1.3%, haven bid from the Iran escalation offset by dollar/yield moves); silver approx. \$64.06-65.05 (-1.0% to +1.5%); copper approx. \$6.52-6.61/lb (+0.1% to +0.2%), still below a fresh all-time high reported in the approx. \$6.83-6.88 area set sometime in August on a London warehouse squeeze — the exact date/level could not be pinned to a single session (Annex A); platinum approx. \$1,730-1,766 (-2.0% to +0.75%), a persistently thin market.^{[40][41][42]}

DXY approx. 99.56-99.78, roughly flat. **FX:** EUR/USD 1.1587 (-0.03%, single-sourced); USD/JPY 158.78 (-0.87%) on the BoJ's hawkish signaling above; GBP/USD approx. 1.350-1.355; USD/CAD approx. 1.388-1.391, essentially flat continuing Tuesday's range ahead of Monday's tariff effective date; USD/MXN approx. 16.98-16.99, modest continued peso strength.^{[37][40]} Bitcoin's Wednesday close could not be located for a third straight edition; the best available read is a late-Tuesday/very-early-Wednesday band of approx. \$76,800-77,450 on Iran-driven risk-off flows, explicitly not a confirmed session close (Annex A).^[43]

5. Derivatives, volatility and positioning

VIX closed 15.20, -6.98% (from Tuesday's confirmed 16.34); **VIX3M 17.78, -3.00%**, with Tuesday's own close now confirmed at 18.33 via CBOE's previous-close field, resolving last edition's unconfirmed mid-afternoon read. The **VIX/VIX3M ratio steepened to approx. 0.855** from Tuesday's approx. 0.891 (Monday: approx. 0.844) — front-month vol fell much faster than the 3-month tenor, a classic post-relief-rally contango steepening even with the Iran war still live.^[44] VIX9D, VVIX and SKEW were all served stale (Tuesday-dated) by CBOE's feed again — the same silent-stale-series pattern flagged in prior editions; VIX6M showed a partial Wednesday read (20.28, through approx. 11:28am ET only, feed froze) and should be treated as directional, not a confirmed close.^[44]

Options flow (Market Rebellion mid-session color, intraday, not end-of-day): rising IV in Nike, HYG, XP, Gerdau, Semtech and SPDN; MU, DELL, INTC, PLTR, NFLX and NVDA were the most-active single names, with NVDA/TSLA/META/AAPL still dominating overall options flow. Ahead of their own prints: Snowflake's Sept-weekly IV read 196 against a 52-week high of just 86 — an extreme richness — and Broadcom's Sept-weekly IV read 130 with a 1.6:1 call/put skew.^[45] Falling IV in GitLab, Elastic, Gap and Nvidia as event risk cleared. SpotGamma's dealer-gamma flip level, the CBOE daily put/call ratio, the MOVE index and 0DTE volume commentary were all unavailable this cycle without a paid feed (Annex A).

CFTC Commitment of Traders: no new release in this window — the most recent report still reflects data as of Tue 25 Aug; the next (data as of Tue 1 Sept) is due Fri 4 Sept and had not posted as of this research, correctly not forced.^[46] **Funding:** SOFR's most recent print remains Tuesday 1 Sept's 3.66% (down 2bp from Monday's 3.68%, standard one-day lag); ON RRP take-up eased further to approx. \$525mn Wednesday from Tuesday's \$725mn, continuing to normalize from Monday's unexplained \$6.73bn month-end spike (single-sourced via FRED, flagged as such).^{[47][48]} Fed H.4.1 (data as of Wed 2 Sept) had not posted as of this window's cutoff — next due Thu 3 Sept, outside window.^[49]

6. The day ahead

Date	Event	Consensus
Thu 3 Sept	ISM Services PMI (Aug)	54.2
Thu 3 Sept	S&P Global Services / Composite PMI (Aug, final)	56.8 / 56.0
Thu 3 Sept	Initial jobless claims	approx. 205K
Thu 3 Sept	Fed H.4.1 balance sheet; Gov. Waller Reuters NEXT interview, 8:30am ET	n/a
Fri 4 Sept	Nonfarm payrolls (Aug) / unemployment rate	approx. +58K / 4.1%
Fri 4 Sept	BoE's Bailey, ECB's Lane remarks	n/a
Mon 8 Sept	Canada's approx. \$27.6bn retaliatory tariffs take effect (US markets closed, Labor Day)	n/a

Sector setup we take into Thursday

- Software/SaaS: watch for follow-through selling in PANW/MDB-style names and whether Broadcom's whisper-number miss extends to other AI-infra reporters, against a backdrop of a still-fresh Snowflake/Dell beat-and-raise pair.
- Energy: Wednesday's fade off overnight highs leaves oil sensitive to any further Hormuz escalation headline; a "brief"-strikes narrative is doing a lot of work holding the risk premium down.
- Utilities/regulated names: PG&E and Edison International remain a distinct, California-specific risk vector separate from the broader macro tape.
- Rates-sensitive growth: 10Y at a post-Nov-2023 high keeps multiple compression in play for long-duration names even on an up-tape day.

Annex A — could not be verified this edition

- NYSE advance/decline breadth, Wed 2 Sept.
- Reddit's (RDDT) specific Wednesday catalyst — the +9.31% move is confirmed, the reason is not.
- Exact date/session of copper's fresh all-time high in the approx. \$6.83-6.88/lb area (two sources disagree on the precise peak).
- VIX9D, VVIX and SKEW Wednesday closes — CBOE's feed served Tuesday-dated snapshots again.
- A confirmed final VIX6M close — feed froze at approx. 11:28am ET.
- SpotGamma dealer-gamma flip level (numeric).
- CBOE daily total put/call ratio.
- MOVE index.
- 0DTE options volume commentary.
- Official CME FedWatch page (secondary trackers used; approx. 58-68% range disclosed).
- A single reconciled WTI/Brent Wednesday close (multi-vendor range disclosed instead).
- A single reconciled gold/silver/copper/platinum Wednesday close (ranges disclosed).
- A single reconciled DXY/USD-CAD/USD-MXN Wednesday close (ranges disclosed).
- Bitcoin's Wednesday approx. 20:15 ET close — unresolved for a third consecutive edition; only a late-Tuesday/early-Wednesday band could be sourced.
- Official Treasury par yields / Fed H.15 for Wed 2 Sept (standard one-business-day lag; secondary levels used).
- Official CME/ICE settlement prints for any commodity (vendor snapshots used throughout, as in every prior edition).

Method note: every figure above carries a named source (Annex B); where sources disagreed on a Wednesday close, the more authoritative source was used where one was clearly better, otherwise the range is disclosed rather than forced to a single number (see Section 4 and Annex A). Session dates were cross-checked against at least one independent recap for every headline index figure to guard against stale prior-day republication. This briefing does not constitute investment advice and carries no portfolio tilt.
