Macro · Equities & Earnings · Commodities & FX · Derivatives & Positioning

Edition 12 · Wednesday, 2 September 2026 (Asia open)
Window: Mon 31 Aug 2026 approx. 20:15 ET → Tue 1 Sept 2026 approx. 20:15 ET
Prepared for Alex · not investment advice

Assumptions, corrections & status — read before the briefing

- Window:** single trading session, Tuesday 1 September 2026 (regular session, close and after-hours). Monday 31 Aug and earlier remain covered in edition 11 and are not repeated here. Tuesday was a normal full trading day — Labor Day 2026 falls on Monday 7 September, confirmed via a 2026 NYSE holiday listing (nyse.com itself blocked the fetch; used a secondary aggregator per the standing sourcing fallback rule)^[46].
- Standing facts re-verified fresh, unchanged (sixth consecutive edition):** Kevin Warsh remains Fed Chair — confirmed directly against the Federal Reserve Board's own leadership page and the byline on Governor Barr's Tuesday speech^[45].
- Scheduler:** single fire, 'last_fired_at' 2026-09-02T00:09:26Z, approx. 9 minutes after the 00:00 UTC slot, no duplicate, no gap — fifth consecutive clean fire since edition 8's anomaly. No trigger action needed.
- Minor data note carried, not corrected:** edition 11's published Monday VIX3M close of 18.34... see correction — actually 17.67 vs. a 17.53 read implied by CBOE's own feed on a retrospective pull; a small, immaterial discrepancy, flagged rather than restated as fact.
- Genuinely unresolved cross-vendor conflicts this edition** (disclosed as ranges rather than forced to one figure, per house sourcing rules): Tuesday gold, copper and platinum closes — see Section 4 and Annex A.
- Open reconciliation:** a 1 Sept report cited Canada's 8 Sept retaliatory-tariff figure at approx. \$27.6bn, versus the approx. \$20bn figure multiply-corroborated and confirmed at edition 9. Not reconciled this edition; approx. \$20bn remains the standing confirmed figure pending a cleaner source.
- Admin (unchanged):** the scheduled task's own stored prompt still contains retired Step 5 GitHub/Telegram delivery language, unchanged since edition 6. This spec-governed delivery (SendUserFile only, in-session) supersedes that stored text per Alex's 17 Aug revision; not re-escalating again this edition absent a fresh signal from Alex, per the standing edition-9 judgment call.

60-second read

- Renewed US-Iran military escalation was the dominant driver of the tape.** CENTCOM confirmed fresh US strikes Tuesday on IRGC targets along Iran's southern coast after a tanker was hit by projectiles in the Strait of Hormuz; Iran vowed a missile-and-drone response, Trump threatened "substantially more severe" retaliation if it comes^[1]. Brent settled \$94.65 (+4.6%) and WTI \$90.22 (+5.2%), both the highest since late July^[2], and the shock cascaded into a broad risk-off rotation: energy and defensives led, growth and tech lagged, and the S&P 500 fell 0.7%, the Nasdaq 1.0%^[3].
- The 10-year Treasury yield pushed to approx. 4.80%, its highest since January 2025,** part of a global bond selloff (Japan's 10-year JGB briefly touched 3% for the first time in 30 years)^[4] as September 16 FOMC hike odds jumped to approx. 66% on CME FedWatch, more than double the approx. 36% priced before Fed Chair Warsh's hawkish Jackson Hole keynote^[5]. Rate-sensitive, debt-funded AI-capex names took the multiple-compression hit: Oracle -5.2%, CrowdStrike -6.9%, Palo Alto Networks -5.2% in the regular session, all explicitly tied by desks to the yield spike rather than company news^[6].
- A busy earnings night after the close.** Dell beat sharply and lifted FY2027 revenue guidance to \$192.0bn from \$167.0bn on a record \$95bn AI-server backlog, +8-10% after hours^[7]; Palo Alto Networks beat, raised FY2027 guidance and announced the Console acquisition, +3.0% after hours despite a weak regular session^[8]; MongoDB beat on both lines but fell 12-13% after hours purely on profit-taking after a 28% trailing-month run^[9].
- Apple rose 2.6% on John Ternus's first day as CEO,** but the move reads more as a tech-sector safe-haven rotation — strong balance sheet, no debt-funded AI capex — than a pure CEO-transition trade; BofA reiterated Buy with an approx. 20% upside price target^[10].
- Growth data softened alongside the inflation story.** ISM Manufacturing fell to 54.6% (missed 55.2% consensus, down from 55.6%) while Prices Paid held at an elevated 71.1%^[11]; JOLTS job openings held at approx. 7.3mm with June revised down 177,000^[12]. Fed Governor Barr gave a conditional, data-dependent read: more patience if inflation cools, decisive hikes if it does not^[13].

1 Market recap

S&P 500
7,631.47
-54.67 / -0.7%

DOW JONES
52,766.88
-419.02 / -0.8%

NASDAQ COMP.
26,099.77
-271.11 / -1.0%

RUSSELL 2000
2,920.13
-36.32 / -1.2%

All four major indexes fell Tuesday, AP and Investrade closes converging tightly^{[3][2]}; a widely-circulated aggregator snippet showing a garbled Nasdaq print and diverging S&P/Dow levels was checked and discarded as a scraping error. VIX closed 16.34, up 9.5% and off an intraday high of 16.80, after Monday's close (14.92) had been the lowest monthly VIX close since November 2024^{[14][2]}. The session's driver was macro/geopolitical, not single-stock: sector performance (chart below) shows a clean risk-off rotation, energy and defensives up, rate-sensitive growth down.

11-sector SPDR ETF proxy closes, a same-day stand-in for the official GICS sector table (still unavailable at close)^[15]. Energy (+1.3%) and Utilities/Health Care/Staples (+0.3% to +0.8%) led; Consumer Discretionary (-1.7%) and Technology (-1.5%) lagged.

2 Equities and earnings

Rates-driven rotation hit debt-funded AI capex

Oracle (ORCL) -5.2% to **\$141.32**, a third straight down session, as the 10-year's push to approx. 4.80% raises the cost of funding Oracle's AI data-center buildout — FY2026 capex rose to \$55.7bn from \$21.2bn, funded with \$43bn of debt and \$5bn of equity, against \$122.3bn of long-term debt versus \$42.5bn of equity. TD Cowen cut its price target to \$240 from \$300 while keeping a Buy rating; Nebius (NBIS) fell approx. 3% in sympathy^[6]. **CrowdStrike (CRWD)**

–6.9% to \$214.56 and Palo Alto Networks (PANW) –5.2% to \$362.09 both fell on the same yield-driven multiple-compression read despite same-day company news that would ordinarily be supportive — CrowdStrike announced a \$2bn Optiv-partnership milestone the same day and it didn't offset the move^[16]. Axon Enterprise –8.5% was the S&P 500's single largest decliner, compounding post-earnings margin concerns (a flat approx. 25.5% adjusted-EBITDA-margin guide) with the same broad multiple reset^[17].

Earnings after the close: three large beats, three different reactions

Dell Technologies reported fiscal Q2 revenue of \$46.97bn (+58% y/y, beat an approx. \$44.4-44.8bn Street view) and non-GAAP EPS of \$7.04 against an approx. \$4.87-4.90 estimate, on record \$60.9bn of AI-server orders and a record \$95bn AI-server backlog; management raised FY2027 revenue guidance to \$192.0bn from \$167.0bn and non-GAAP EPS to \$25.50 from \$17.90^[18]. The regular session had already sold off 6.8% into the print on pre-earnings de-risking; shares rose 8-10% after hours as the guidance raise landed^{[7][19]}. **Palo Alto Networks** beat on revenue (\$3.41bn vs. \$3.35bn est.) and adjusted EPS (\$1.02 vs. \$0.98 est.), with next-gen security ARR up 63% y/y to \$9.1bn, raised FY2027 revenue guidance to \$14.10-14.20bn from an approx. \$13.79bn estimate, and announced the acquisition of Console, an AI-native agentic-security platform (deal terms undisclosed)^[8]. The regular session fell 5.2% on pre-earnings profit-taking (the stock had rallied approx. 112% year-to-date) and a fresh Chinese cybersecurity review of the company; shares rose 3.0% after hours on the beat-and-raise^[20]. **MongoDB** beat on revenue (\$771.8mn, +30% y/y, vs. an approx. \$733.7-735.2mn estimate) and non-GAAP EPS (\$1.90 vs. \$1.61 est.), but fell 12-13% after hours — sources attribute this cleanly to profit-taking after a 28% trailing-month, 7% trailing-week rally into the print, not to any guidance disappointment; Q3 guidance of \$756-761mn revenue was in line^[9].

Apple, Nvidia, the wildfire names, and other movers

Apple +2.6% to \$325.13 on John Ternus's first day as CEO (Tim Cook moved to executive chair); desks framed the move less as a CEO-change trade — the stock is up approx. 37% since the succession was announced and is seen as largely priced in — and more as a rotation into Apple's debt-light balance sheet as a relative safe haven versus AI-capex-funded peers amid the yield spike. Rosenblatt raised its price target to \$303 (kept Neutral, below spot); BofA reiterated Buy at \$380, citing Ternus's hardware background and expected pushes into AI-at-the-edge and wearables^[10]. **Nvidia** –1.5% to \$217.44 tracked the broader tech selloff with no company-specific news found. **Moderna** +9.9% to \$154.27 extended a multi-day analyst-upgrade cycle tied to the August 19 Merck/Moderna Phase 3 melanoma-vaccine data, not a fresh Tuesday catalyst^[21]. **Edison International** (–0.2% to \$53.85) and **PG&E** (–0.5% to \$13.21) stabilized after Monday's 20-23% wildfire-bill crash even as UBS cut its EIX target to \$63 from \$75 the same day — a fresh cut that barely moved the stock, plausibly because Monday's selloff (and Mizuho's own Monday downgrade) had already done the repricing^[22]. **GoPro** announced a definitive merger with Starman Optical, a privately held optical-transceiver maker targeting AI-datacenter and defense end markets, in a \$285mn (\$1.14/share) recapitalization; GoPro holders retain approx. 10% of the combined company. The stock's exact Tuesday reaction could not be reliably confirmed and is not reported^[23]. Medtronic beat fiscal Q1 estimates and raised the low end of FY2027 EPS guidance on cardiovascular-device demand; exact figures and the stock's precise move could not be independently confirmed this edition (Annex A)^[24].

3 Macro, policy and rates

ISM Manufacturing PMI (August) fell to 54.6%, missing the 55.2% consensus and down from July's 55.6% — an eighth straight month of expansion but a clear deceleration. New Orders slowed to 53.7% from 56.7% and Employment eased to 51.2%; Prices Paid held at an elevated 71.1%, unchanged from July, keeping an inflationary undertone in the report^[11]. **JOLTS job openings (July) held at approx. 7.3mn**, below the approx. 7.30-7.33mn consensus, with June revised down 177,000 to 7.2mn^[12] — both data points softened the growth picture ahead of Friday's payrolls report. **Fed Governor Michael Barr**, speaking at a Second Chance Lending forum, gave an explicitly conditional read on rates: "if trends in the data give me some confidence that inflation is moderating on a path to 2 percent, then I think we can take a bit more time to assess our policy stance. However, if inflation appears not to be moderating sufficiently, then I think we should act decisively to raise rates." He called inflation "too high" for over five years, with 2025 progress stalled by tariffs, the Middle East conflict and AI-driven demand. No other Fed speaker appeared Tuesday^[13].

The **10-year Treasury yield closed near 4.80%**, its highest level since January 2025, and the 30-year traded at its highest since 2006 (secondary-market levels; the official Treasury par-yield curve and Fed H.15 lag a business day and were not yet posted for Tuesday)^[14]. **September 16 FOMC hike odds rose to approx. 65-67% on CME FedWatch**, more than double the approx. 36% priced before the Jackson Hole keynote — three independently sourced, Tuesday-adjacent reports converged in the mid-to-upper 60s%; a stale Kalshi read of 47% from three sessions earlier predates this move and should not be read as a live conflict^[5].

Iran/Hormuz — the session's dominant story. CENTCOM confirmed US forces struck IRGC targets along Iran's southern coast Tuesday (Bandar Abbas, Jask, Chabahar, Konarak, Minab, Sirik and Qeshm Island) following an attack on a tanker in the Strait of Hormuz and attempted IRGC strikes on shipping and US personnel. Trump said a larger response was "waiting in the wings" and threatened "substantially more severe" retaliation if Iran struck back; Iran said it would respond with missiles and drones against American interests. Strait of Hormuz tanker transits fell to 107 in the week of Aug 24-30 from 121 the prior week, and one tanker was struck by unidentified projectiles^{[1][25]}.

On trade, Treasury Secretary Bessent mocked Canada's naval capacity in a CNBC interview Tuesday but there was no new tariff action; Canada's retaliatory tariffs remain set to take effect September 8 (see disclosure box above for an unreconciled dollar-figure discrepancy)^[26]. The Bank of Japan's September rate-hike odds remain unresolved across sources, ranging from approx. 25% (a same-day reading) to approx. 57% (a Monday reading) — carried as an open item rather than forced to one number^[27].

4 Commodities and FX

Oil led the tape. WTI settled \$90.22/bbl (+\$4.46, +5.2%), Brent \$94.65/bbl (+\$4.16, +4.6%) — both the highest since late July, on the Iran/Hormuz escalation above; two independently sourced market reviews converged on these exact prints^{[2][28]}. Natural gas eased to approx. \$2.89-2.92/MMBtu (roughly -0.7% to -1.5%); no EIA storage data falls in this window (Thursday release)^[29].

Precious and base metals carried genuine, unresolved cross-vendor conflicts Tuesday — disclosed as ranges rather than forced to one figure, per house sourcing rules. Gold ranged \$4,341-4,477/oz across vendors (a single, not-fully-corroborated read put the close near \$4,396, down approx. 1.9%), pressured by the firmer dollar and rate-hike repricing^[30]. Silver's direction resolved toward down approx. 2.7-3.0% to approx. \$64.5/oz (two independently sourced reads converged here; a third vendor's near-flat read looks stale and was discarded)^[31]. Copper ranged \$6.44-6.72/lb, still below the 26 Aug intraday Comex record of \$6.7775/lb, with no single figure resolvable this edition^[32]. Platinum's Tuesday close could not be pinned down (a self-contradicting vendor page and a late-day tick spread \$1,744-1,797); separately, Friday 28 August's long-open platinum close resolved — provisionally, single-sourced — to \$1,854.30 (+0.03%)^[33].

Dollar firmer, broadly. DXY closed 99.56 (+0.13%)^[34]. EUR/USD 1.1591 (-0.23%); USD/JPY 160.22 (+0.29%); GBP/USD 1.3544 (-0.03%); USD/CAD approx. 1.387-1.390, firming modestly on the live tariff dispute (Monday's 1.3866 level was tightly corroborated across the Bank of Canada's own daily rate and two vendors); USD/MXN approx. 17.01 (+0.09%, single-sourced)^[35]. Bitcoin traded to an \$77,946 morning print (8:19am ET); no reliable Tuesday close was located and none is reported^[36].

5 Derivatives, volatility and positioning

VIX closed 16.34 (open 16.06, high 16.80, low 15.20), up 1.42 points / 9.5% — CBOE's own delayed-quotes feed, timestamped to the 4:15pm ET settlement calculation, corroborated by an independent market review's "high of 16.80, ended above 16" narrative; a diverging 15.87 read from one aggregator, alongside index levels that disagreed with the AP/Investrade cluster, was discarded as likely stale^{[14][2]}. VIX3M was last observed at 18.34 mid-afternoon (approx. 2:39pm ET) with the feed not refreshing further — reported as a same-day-but-not-confirmed-final-close reading^[14]. The VIX/VIX3M ratio moved to approx. 0.891 from Monday's 0.844: term structure flattened somewhat but stayed in contango, no backwardation flip. VIX9D, VIX6M, VVIX and SKEW were all served stale (Monday-dated) by the CBOE feed and are not reported as Tuesday figures^[14].

Single-sourced options-flow color (Market Rebellion): elevated implied volatility clustered in Tuesday/Wednesday earnings names — MongoDB (approx. 219 IV, put/call skew approx. 1:1.7 favoring puts), and a group including Snowflake, Cardlytics, C3.ai, lululemon and Palo Alto Networks in the 77-179 IV band alongside Dell, Broadcom and HPE ahead of their own prints. Unusual put volume (a hedging lean) was flagged in Edison International, Alcoa, Pfizer and Ross Stores^[37]. SPX dealer-gamma/GEX estimates could not be sourced to a reliable, Tuesday-dated figure this edition — two third-party providers disagreed by orders of magnitude even on the same (stale) date, so nothing is reported (Annex A).

No new CFTC Commitments of Traders data this window, correctly — the next release (data as of Tuesday 1 Sept) is due Friday 4 Sept, after this window's cutoff^[38]. **Funding:** SOFR's most recent published print remains Monday 31 Aug's 3.68% (one-business-day lag; Tuesday's print was not yet available at cutoff), continuing a mild upward drift from 3.64% mid-week to 3.68% into month-end^[39]. ON RRP take-up partially reverted Tuesday to \$725mn (award rate flat at 3.50%) from Monday's unexplained \$6.73bn month-end spike — still roughly 4x Friday's \$175mn baseline, so the normalization is only partial^[40]. Fed H.4.1 balance-sheet data is next due Thursday 3 Sept (data as of Wed 2 Sept), outside this window^[41].

6 The day ahead

Wednesday 2 September: ADP employment (August, consensus +47,000 vs. an upwardly-revised +44,000 prior)^[42]; FOMC Beige Book, 2:00pm ET^[43]; a heavy earnings slate after the close — Broadcom (fiscal Q3, call 5:00pm ET), Snowflake (implied move approx. 10.8%), NetApp (approx. 11.9%) and HPE (approx. 10.8%)^[44]; Brown-Forman reports before the open (implied move approx. 16.0%).

Date	Event	Consensus / notes
Thu 3 Sept	ISM Services PMI; jobless claims; Fed H.4.1 (4:30pm ET)	—
Thu 3 Sept AMC	DocuSign, Ciena, Guidewire, Zscaler, Samsara earnings	—
Thu 3 Sept	Fed Governor Waller, Reuters NEXT "Economic Outlook" interview	—
Fri 4 Sept	Nonfarm payrolls (August) — week's marquee print, first hard labor read since the hawkish Jackson Hole pivot and the downward benchmark revision	cons. approx. +58K vs. July's -23K
Fri 4 Sept	BoE Governor Bailey; ECB's Lane remarks	—
Mon 8 Sept	Canada's retaliatory tariffs take effect	see disclosure box (dollar figure unreconciled)

Sector setup we take into Wednesday

- Rate-sensitive, debt-funded AI-infrastructure software (Oracle, CrowdStrike, Palo Alto Networks) stays exposed to further yield moves regardless of Wednesday's own news — Tuesday's selloffs in this group were explicitly yield-driven, not fundamentals-driven.
- Energy has a live geopolitical bid (Iran/Hormuz) heading into Wednesday; any de-escalation signal, or its absence, is a bigger near-term swing factor for the sector than the day's data calendar.
- Broadcom's Wednesday print (approx. 5pm ET, after this edition's next cutoff) lands directly into the same AI-capex-versus-yields debate that hit Oracle and Dell/Palo Alto's post-earnings tapes Tuesday — worth watching the after-hours reaction pattern for a read-across.
- Defensives (utilities, staples, health care) led Tuesday's rotation; a further yield spike or oil shock would likely extend that leadership, while any calming in either would tend to unwind it quickly given how narrowly earnings-and-yields-driven Tuesday's dispersion was.

Annex A — Could not be verified this edition

- Gold's precise Tuesday close (range \$4,341-4,477/oz; best-labeled but not independently corroborated read approx. \$4,396).
- Silver's precise Tuesday close (resolved direction, approx. \$64.5, but no single vendor figure independently corroborated).
- Copper's precise Tuesday close (range \$6.44-6.72/lb; a late-day tick of \$6.5475 is the best single point estimate without full confidence).
- Platinum's precise Tuesday close (a vendor page self-contradicted; a late tick spread \$1,744-1,797).
- Platinum's Friday 28 Aug close (\$1,854.30, +0.03%) — single-sourced only, not independently corroborated.
- Bitcoin's Tuesday close — only an 8:19am ET morning print (\$77,946) was located.
- USD/MXN and USD/CAD's precise Tuesday closes — each single-sourced to one vendor (though USD/CAD's Monday base is tightly corroborated across three sources).
- 2-year and 30-year Treasury yields' precise Tuesday closing levels — only qualitative reads ("highest since 2006" for the 30-year) were located; the official par-yield curve lags a business day.
- Official CME FedWatch page — blocks automated fetching; secondary citations (Forbes, Techtimes, a Yahoo Finance market piece) used instead, converging in the mid-to-upper 60s%.
- SPX dealer-gamma / GEX for Tuesday — two third-party providers disagreed by orders of magnitude even on the same (stale, non-Tuesday) date; nothing usable was found.
- VIX9D, VIX6M, VVIX and SKEW for Tuesday — CBOE's own feed silently served Monday-dated snapshots for these thinner series (confirmed via each series' own last-trade timestamp) even while VIX/VIX3M were fresh.
- VIX3M's confirmed final (4:15pm ET) Tuesday close — the feed's own snapshot stopped refreshing mid-afternoon; 18.34 is reported as a same-day, not-final-confirmed reading.
- Official CME/ICE settlement prices for any commodity or VIX future — not accessible this edition; all commodity figures are vendor/news-site snapshots.
- CBOE total put/call ratio for Tuesday — the tracked source had not yet updated past Monday 31 Aug at time of research.
- MOVE index (bond volatility) — source blocked automated fetching.
- Bank of Japan September rate-hike odds as a single figure — genuinely conflicting across sources (approx. 25% to approx. 57% within a 24-hour span); reported as an open range.
- Medtronic's exact fiscal Q1 FY2027 revenue/EPS figures and precise Tuesday stock move — full-text source was blocked; only the beat-and-raise headline was confirmed.
- GoPro's exact Tuesday stock-price reaction to the Starman Optical merger announcement — a data pull looked like a stale/static widget rather than a genuine close.
- Canada's exact retaliatory-tariff dollar figure for 8 Sept — a Tuesday report's approx. \$27.6bn conflicts with the approx. \$20bn figure confirmed at edition 9; not reconciled this edition.
- Full official closing 11-sector GICS table and NYSE closing breadth — unavailable at close for all twelve editions to date; the SPDR sector-ETF proxy (chart, Section 1) is used as the standing same-day workaround.

Method: figures are sourced live each edition and never estimated, inferred, or filled from memory. Where sources disagree, the more authoritative source is used and the disagreement is disclosed; where no figure can be verified, it is listed in Annex A rather than guessed. Every inline reference number corresponds one-to-one with an Annex B entry. This briefing is prepared by an automated research process for Alex's personal use and is not investment advice.
