Daily Economic Briefing

Thursday 12 November 2026 | Window: Tue 10 Nov 2026 20:00 ET – Wed 11 Nov 2026 20:23 ET (Wed 11 Nov close/AH, the window's one NYSE session — Veterans Day: equities traded a full normal session, Treasury cash markets and the Federal Reserve were closed) | Research cutoff Wed 11 Nov 2026, 20:23 ET | Edition 62

60-second read

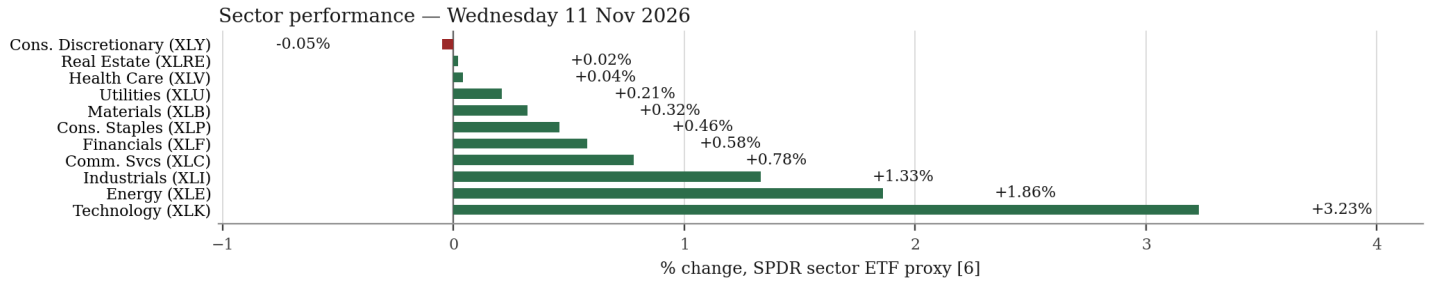

1. Equities rallied broadly on Veterans Day, reversing Tuesday's hot-CPI pullback: the S&P 500 rose 1.3% to 7,619.38, the Dow 0.5% to 52,486.49, the Nasdaq Composite 1.6% to 25,466.19 and the Russell 2000 0.9% to 2,846.26, with 10 of 11 SPDR sector ETFs closing higher.[1][2]
2. The proximate driver was CoreWeave's blowout Q3: revenue of $3.661bn (+168% y/y) beat its own guidance, and FY2026 revenue guidance was raised to $13.0–13.3bn — the stock closed +24.71% at $60.77, its best day since April 2025, and Technology was the clear sector leader (XLK +3.23%) as Nvidia also rebounded (+2.87%).[3][4]
3. December FOMC hike odds held at approx. 85–86% on a fresh Polymarket/DeFi Rate pull — unchanged from Tuesday even as equities rallied and VIX fell 10.1% to 17.49, suggesting the rally reflected risk appetite and an AI-capex reprieve rather than any softening in rate-path conviction.[16][17][34]
4. Two standing central-bank sourcing gaps closed against primary documents this edition: Sweden's Riksbank confirmed its 4 Nov hike was unanimous (5-0), and Mexico's Banxico's 5 Nov cut to 6.25% (3-2 vote) is now primary-source confirmed rather than secondary-only — though Banxico's next-decision date is now the open item.[18][19]
5. Day ahead: October PPI is due Friday 13 Nov, 8:30am ET; the CFTC's Commitment of Traders report and the Q3 2026 13F filing deadline both land Monday 16 Nov (the CoT delay is confirmed as routine holiday spacing, not a schedule change); Treasury cash markets and the Fed reopen Thursday.[24][27]

1. Market recap

S&P 500	Dow Jones	Nasdaq Comp.	Russell 2000	VIX	DXY
7,619.38	**52,486.49**	**25,466.19**	**2,846.26**	**17.49**	**102.84**
+1.3%	+0.5%	+1.6%	+0.9%	-10.1%	approx. +0.6%

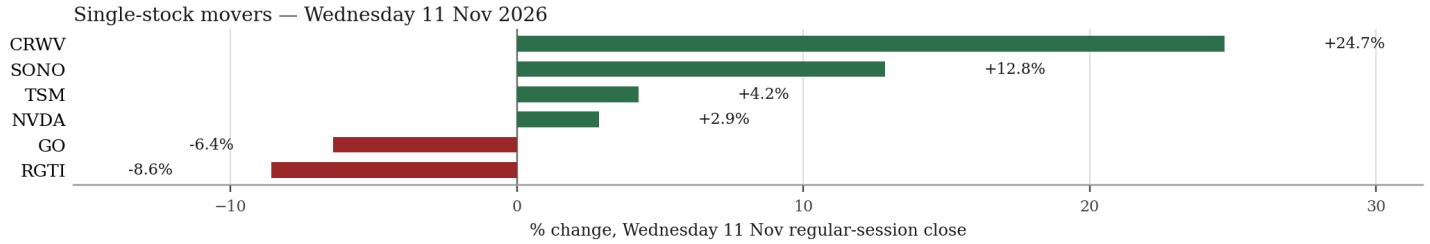

Equities staged a broad relief rally in a full normal session despite Veterans Day closing US Treasury cash markets and the Federal Reserve.[33] The S&P 500 gained 1.3% to 7,619.38, the Dow 0.5% to 52,486.49, the Nasdaq Composite 1.6% to 25,466.19 and the Russell 2000 0.9% to 2,846.26, confirmed via AP's "How major US stock indexes fared" (mirrored word-for-word at WTOP.com and lanacion.com.ar) and cross-checked against Yahoo Finance, with no cross-source disagreement.[1] The move reversed Tuesday's hot-CPI-driven pullback and was led decisively by CoreWeave's earnings-driven surge and a broader AI/chip rebound rather than any dovish turn in rate expectations, which held steady (see Section 3).

Sector performance

Ten of 11 SPDR sector ETFs closed higher, a materially broader advance than Tuesday's 6-of-11 split.[2] Technology led by a wide margin (XLK +3.23%), swinging from Tuesday's worst laggard (-1.15%) to Wednesday's best performer on CoreWeave's results and Nvidia's rebound. Energy (+1.86%) and Industrials (+1.33%) also outperformed; Communication Services, Financials, Consumer Staples, Materials, Utilities, Health Care and Real Estate all posted small gains. Consumer Discretionary (-0.05%) was the lone laggard, essentially flat. A secondary cross-check against MarketWatch/WSJ sector data failed to return for a third straight edition; the sector read rests on Stockanalysis.com alone this edition.

2. Equities and earnings

CoreWeave (CRWV) was the session's dominant story. Its Q3 2026 8-K (Exhibit 99.1, filed via SEC EDGAR) showed revenue of $3.661bn, +168% y/y, beating the company's own $3.45–3.60bn guidance range; GAAP net loss widened to $(709)m (EPS $(1.27), from $(0.22) a year earlier) on net interest expense that surged to $(846)m, even as adjusted EBITDA reached $2,256m (62% margin) and operating income turned GAAP-positive at $207m. Remaining performance obligations (backlog) stood at approx. $132.5bn. Guidance was raised: FY2026 revenue to $13.0–13.3bn (from $12.4–13.2bn), year-end contracted power above 4.6GW, and exit-2026 annualized revenue run-rate of $20–21bn; no standalone Q4 revenue figure was disclosed separately.[3] Tuesday evening's after-hours reaction is disclosed as genuinely disputed across vendors — GuruFocus showed approx. +7.9%, Investing.com approx. +5.7%, a third outlet approx. +2.4% — consistent with the stock drifting higher through the earnings call rather than settling at one print; no single AH figure is reported as fact.[5] The confirmed, separate figure is Wednesday's

regular-session close of $60.77, up 24.71% from Tuesday's $48.73 — CoreWeave's best day since April 2025, corroborated by CNBC and Motley Fool.[4] The bounce follows a month in which the stock had fallen more than 38–40% on AI-infrastructure-financing concerns, and commentary (UBS, via CNBC) characterized Wednesday's move as relief rather than a restoration of full confidence.

Elsewhere in technology and AI-adjacent names: **Sonos (SONO)** rose 12.85% to $19.06 after FY2026 results showed a return to growth, adjusted EBITDA up 39% y/y to $184m, and Q4 results above the guidance midpoint.[6][4] **TSMC (TSM)** rose 4.25% to $413.35 after disclosing board-approved investments of up to $500m each into Anthropic and OpenAI Group PBC preferred stock, via its own SEC Form 6-K.[7][4] **Nvidia (NVDA)** rose 2.87% to $173.73, rebounding after three straight declines (-4.27% Monday, -5.47% Tuesday) tied to the board's ongoing independent investigation into CEO Jensen Huang's reported relationship with a foreign-intelligence target. A direct SEC EDGAR filing-list check found no new 8-K from NVIDIA in the 8–12 November window; the company's most recent 8-K on file remains dated 3 September 2026 — the governance story remains open with no primary-sourced development this session.[10][4] On the downside, **Rigetti Computing (RGTI)** fell 8.56% to $11.11 after Q3 revenue fell to $1.4m (from $1.9m y/y) and its operating loss widened to $33.2m, and **Grocery Outlet (GO)** fell 6.42% to $13.12 after Q3 net sales rose only 0.9% amid margin compression and a $158.0m non-cash goodwill impairment that drove a 39-week net loss of $161.4m.[8][9][4]

Also reporting, both beat-and-raise: **Mercury Systems** (FQ1 FY2027 revenue $253.2m, +12.4%; adjusted EPS $0.52; FY2027 outlook raised) and **B&G Foods** (Q3 net sales $459.8m, +4.7%; adjusted EPS $0.21, +40%; FY2026 guidance raised) — neither stock's price reaction could be independently verified this edition.[14][15] **Skydance Corp (SKYD)** fell a further 1.74% Wednesday to $7.90, extending Tuesday's 7.59% drop; a direct SEC EDGAR filing-history check resolved last edition's ticker confusion — SKYD and Paramount Skydance (PSKY) are the same legal entity (CIK 0002041610, renamed from Paramount Skydance Corp to Skydance Corp), not two separate companies.[11] Tuesday's decline is best explained, though not primary-confirmed, by disclosed Morgan Stanley and Citizens price-target cuts and a flagged approx. $200m Q4 profit hit from a weak Warner Bros. film slate.[12] No sell-side analyst action could be independently verified for a fifth straight edition; a widely circulated 24/7 Wall St. roundup's claimed upgrades were spot-checked against other sourcing and found to contradict it (e.g., on Mercury Systems), and were excluded entirely.[13]

3. Macro, policy and rates

Central bank	Policy rate	Last change	Next decision
Federal Reserve	3.75%–4.00%	Held, 28 Oct 2026 (10-2)	8-9 Dec 2026
Bank of Japan	approx. 1.25%	Held, 29-30 Oct 2026 (8-1)	17-18 Dec 2026
Bank of England	4.00%	Hiked 25bp, 5 Nov 2026 (8-1)	17 Dec 2026
European Central Bank	Deposit 2.50% / Refi 2.65% / Lending 2.90%	Held, 28-29 Oct 2026	16-17 Dec 2026
Bank of Canada	2.50%	Hiked 25bp, 28 Oct 2026	9 Dec 2026
Reserve Bank of Australia	4.85%	Hiked 25bp, 3 Nov 2026 (6-3)	7-8 Dec 2026
Swiss National Bank	0.00%	Held, unchanged since Sept 2026	10 Dec 2026
Norges Bank	4.50%	Hiked 25bp, 24 Sept 2026	17 Dec 2026
Riksbank	2.00%	Hiked 25bp, 4 Nov 2026, unanimous 5-0	approx. 16 Dec 2026
Banxico	6.25%	Cut 25bp, 5 Nov 2026 (3-2)	unavailable – see Annex B

A fresh Polymarket Gamma API pull put December's FOMC decision (8-9 Dec) at approx. 85.5% for a 25bp hike, essentially unchanged from Tuesday's post-CPI read; DeFi Rate's blended Kalshi/Polymarket aggregator corroborated at approx. 86%.[16][17] Kalshi's own direct fetch failed again (26th consecutive failure) and CME FedWatch again blocked direct access (22nd consecutive failure).[16] Sweden's Riksbank minutes, fetched directly from riksbank.se, show all five Executive Board members individually backed the 4 November hike with no recorded dissent — a unanimous 5-0 decision, closing a four-edition open thread.[18] Banxico's own 5 November press release, fetched directly, confirms the 25bp cut to 6.25% on a 3-2 vote (Governor Rodríguez Ceja, Deputy Governors Cuadra García and Mejía Castelazo for the cut; Borja Gómez and Heath against) — matching prior secondary reporting exactly, though the release does not state a next-meeting date, which is now an open item rather than the approx. 17 Dec 2026 carried on secondary sourcing.[19] The NFIB October Small Business Optimism Index read 97.8, down 0.1pt from September, via Trading Economics after nfib.com again returned HTTP 403.[20] US government funding was re-confirmed directly: H.R. 6500 funds federal agencies through 11 December 2026, no shutdown in effect.[22] A fresh Federal Register API query of USTR's recent filings again found no primary document codifying the reported reciprocal-tariff-truce extension to 10 January 2027; it remains secondary-sourced to Treasury Secretary Bessent's statement only.[23] US midterm-election certification remains unconfirmed, but this now has a structural explanation rather than being a research gap: there is no single national certification step for midterms (no electoral-college mechanism), and certification runs state-by-state with deadlines extending into December (e.g., Georgia, 18 Dec).[21]

4. Commodities and FX

Instrument	Level	Chg	Note
WTI crude	$86.23 (Investing.com) / $85.83 (Yahoo)	+0.22% / -0.24%	cross-vendor gap disclosed
Brent crude	$92.76 (Investing.com) / $92.02 (Yahoo)	+1.39% / +0.58%	Russia-Ukraine talks (Abu Dhabi) cited as a drag
Henry Hub (NGZ6, Dec)	$3.246 (Investing.com) / $3.264 (Yahoo)	-1.52% / -0.97%	cross-vendor gap persists, narrower than Tuesday
Gold futures	$3,983.85	-1.15%	Tue base revised vendor-side, see Annex A
Silver futures	$51.240	+0.03%	Tue base revised vendor-side, see Annex A
LME copper (cash)	$13,875.50/t	-0.83%	vs Tue's $13,992.00/t
LME copper (3-month)	$13,795.00/t	n/a	current-day print only; see Annex A on the structural gap
DXY	102.84 (Yahoo) / 102.88 (Investing.com)	approx. +0.60% / +0.63%	recurring minor cross-vendor gap, narrower than usual
EUR/USD	1.1090	-0.66%	—
GBP/USD	1.3276	-0.51%	—

USD/JPY	159.78	+0.64%	dollar near 19-month high, yen toward 160
2-yr Treasury	4.73%	unchanged	cash market closed for Veterans Day
10-yr Treasury	4.98%	unchanged	cash market closed for Veterans Day
30-yr Treasury	5.35%	unchanged	cash market closed for Veterans Day

Crude was mixed across vendors on a quieter day than Tuesday's drop, with Brent weighed by reported Russia-Ukraine-US talks in Abu Dhabi that raised the prospect of sanctions relief on Russian supply, partly offset by ongoing Iran-US tension.[28] Henry Hub's cross-vendor reconciliation gap persisted for a second straight session, though it narrowed from Tuesday's 28bp split; the front-month contract remains NGZ6 (December), with no roll to NGF7 yet.[29] Gold and silver fell again as the dollar firmed on steady hike odds; Kitco's historical-close pages remain totally unreachable (redirecting to a live-quote-only page), a fourth straight failed edition.[30] LME copper's 3-month series riddle is now resolved at the root: westmetall.com has no separate queryable field for a historical 3-month series (only the cash series, `LME_Cu_cash`, is a valid historical parameter) — the site's "3 months" column is a same-day display only, a structural limitation rather than an access problem to keep retrying. Wednesday's current-day 3-month print is cross-checked loosely against Yahoo Finance's COMEX HG=F (converted to $/tonne), which lines up closely.[31] DXY and FX crosses reconciled with the usual small, narrower-than-typical cross-vendor gap on DXY; EUR/USD, GBP/USD and USD/JPY all reconciled cleanly against Investing.com's history.[32] Treasury cash markets were confirmed closed for Veterans Day: home.treasury.gov's TextView page posted no new row for 11 November, leaving Tuesday's curve (2-yr 4.73%, 10-yr 4.98%, 30-yr 5.35%) as the most recent official print.[33]

5. Derivatives, volatility and positioning

The VIX complex eased sharply across the curve in continued ascending contango: VIX fell 10.12% to 17.49, VIX9D fell 13.48% to 16.04, VIX3M fell 6.78% to 19.24, VIX6M fell 4.14% to 21.08, VVIX fell 6.37% to 90.47 and SKEW fell 1.34% to 149.09, all via CBOE's delayed-quotes feed with every series' last_trade_time matching Wednesday's session.[34] Manually computed day-over-day changes matched the feed's own figures exactly, extending the clean streak (both known feed bugs absent) to a third straight edition.[34] CoreWeave's options market could not be verified in any dated, labelled way this session: optionslam.com showed unlabeled figures (approx. 19.0%/4.81%) for CRWV that could not be confirmed as the pre-earnings implied move, so no implied-vs-realized comparison is reported as fact — if the approx. 19% figure is accurate, Wednesday's realized 24.71% move would have exceeded it, but this is disclosed as unconfirmed rather than stated outright. No dated options-flow or gamma commentary tied specifically to Wednesday's session was found for Nvidia; the most recent dated SpotGamma note (4 Nov) showed elevated put skew ahead of Nvidia's own 17 November earnings date. No new CFTC Commitment of Traders report fell inside this window — the most recent report on file still covers 3 November data. The irregular November CFTC release spacing (6th, 16th, 20th, 30th), an open question since edition 60, is now resolved: the agency's own release-schedule page flags both the 16th and 30th explicitly as holiday-delayed single weekly releases, not a shift to a twice-weekly schedule.[27] Dealer-gamma sources (zerogex.io, SpotGamma) remained fully unusable, extending both failure streaks.[35]

6. The day ahead

Date	Event	Consensus / context
Thu 12 Nov	Weekly initial jobless claims (wk ended 7 Nov)	consensus not reliably sourced this edition – see Annex B
Fri 13 Nov, 8:30am ET	October PPI (final demand)	consensus not reliably sourced this edition – see Annex B[24]
Mon 16 Nov	CFTC Commitment of Traders (delayed, covers 10 Nov data); Q3 2026 13F filing deadline	delay is routine holiday spacing, not a schedule change[27]
Tue 17 Nov	October retail sales	Census Bureau schedule[25]
Tue 17 Nov	Nvidia Q3 FY2027 earnings	date per dealer-positioning commentary; not independently re-confirmed against Nvidia's own IR calendar
approx. Wed 18 Nov	FOMC October-meeting minutes	three weeks after the 27-28 Oct decision, the Fed's standard cadence; exact date not independently confirmed[26]

Sector setup we take into Thursday

- Technology: momentum carries in after Wednesday's CoreWeave-led, broad AI/chip rebound (XLK +3.23%); watch whether Nvidia's governance overhang resurfaces absent a fresh catalyst.
- Energy: crude's cross-vendor split leaves direction unclear into Thursday; Russia-Ukraine talks remain a swing factor for Brent specifically.
- Rates-sensitive sectors: little changed by the rally, since December hike odds (approx. 85-86%) did not move — the rally reflects risk appetite, not a dovish repricing.
- Consumer Discretionary: the lone sector laggard Wednesday, essentially flat; watch for confirmation either way as more names report.

Annex A — Assumptions, corrections and status

- No correction this edition: nothing published in a prior edition was found to be wrong.
- Veterans Day: equities traded a full normal session; Treasury cash markets and the Federal Reserve were closed, confirmed directly against home.treasury.gov (no new TextView row for 11 Nov).
- Gold's Tuesday (10 Nov) base was revised by Investing.com from the $4,046.20 reported last edition to $4,030.20 — a vendor-retroactive-revision recurrence, not a correction to a figure this report published incorrectly at the time it was checked.
- Silver's Tuesday base was similarly revised from $51.563 to $51.225.
- Henry Hub's Tuesday base now reads $3.296 on both vendors, versus the $3.293/$3.302 split reported last edition — a smoothing, not an error.
- WTI (approx. 0.47%) and Brent (approx. 0.80%) showed fresh cross-vendor gaps for Wednesday's close.
- Henry Hub's cross-vendor gap persisted a second straight session (approx. 0.55%), narrower than Tuesday's 28bp split.
- DXY's recurring cross-vendor gap narrowed to approx. 4bp this edition (Yahoo 102.84 vs. Investing.com 102.88).
- CoreWeave's Tuesday-evening after-hours reaction is disclosed as disputed across vendors (approx. +2.4% to +7.9%); only the confirmed +24.71% regular-session close is reported as fact.
- LME 3-month copper's root cause is now identified: westmetall.com has no separate queryable historical field for the 3-month series (only the cash series is valid); its "3 months" column is a same-day display only. This is a structural limitation, not a retry-worthy access problem — future editions should report the current-day print without further access attempts.
- Riksbank's 4 Nov hike is now confirmed unanimous (5-0) via the bank's own primary minutes, closing a four-edition open thread.
- Banxico's 5 Nov decision (cut to 6.25%, 3-2 vote) is now primary-source confirmed, matching the figure already carried — but its next-decision date, previously carried as approx. 17 Dec 2026 on secondary sourcing, could not be reconfirmed from the primary release and is now genuinely unknown.
- Skydance Corp (SKYD) and Paramount Skydance (PSKY) are confirmed via SEC EDGAR to be the same legal entity (a name/ticker change on one CIK), resolving a standing confusion thread.
- The secondary sector-performance cross-check (MarketWatch/WSJ) failed for a third straight edition; the sector table/chart rests solely on Stockanalysis.com.
- A widely circulated 24/7 Wall St. analyst-action roundup was checked and found to contradict independent sourcing on spot-check (e.g., on Mercury Systems) — excluded; no analyst action verified for a fifth straight edition.
- The CFTC's irregular November release spacing (6th, 16th, 20th, 30th) is resolved: the agency's own release-schedule page flags the 16th and 30th explicitly as holiday-delayed, confirming a single weekly schedule rather than a shift to twice-weekly releases.
- A primary source for the reciprocal-tariff-truce extension to 10 Jan 2027 (Bessent) still could not be found despite a fresh Federal Register API query — remains secondary-sourced only.
- US midterm-election certification has no single national step; it runs state-by-state with deadlines into December, so continued "unconfirmed" status is structural, not a research gap.

Annex B — Data points sought but not verified this edition

- CoreWeave's exact Tuesday-night after-hours % move (vendors ranged approx. +2.4% to +7.9%).
- CoreWeave's standalone Q4 2026 revenue guidance (disclosed only embedded in FY/ARR totals).
- optionslam.com's unlabeled CRWV figures (approx. 19.0%/4.81%) — could not confirm these represent the pre-earnings implied move.
- Skydance Corp's Tuesday -7.59% driver — best explained by analyst price-target cuts and a Warner Bros. guidance warning, not primary-confirmed.
- A claimed tie between International Money Express (+6.08%) and Western Union (-3.03%) moves and the Intermex deal's contractual deadline — no primary confirmation found; excluded from the movers chart/table entirely.
- Mercury Systems' and B&G Foods' stock-price reactions to their beat-and-raise reports — not independently verified this edition.
- October PPI's consensus forecast — the one aggregator found had internally inconsistent figures; not reported.
- The exact release date attached to the approx. 195K jobless-claims consensus figure circulating this window.
- FOMC October-meeting minutes' exact release date — inferred at approx. 18 Nov 2026 from the Fed's standard three-week cadence, not independently date-confirmed.
- Banxico's next policy-decision date — previously approx. 17 Dec 2026 on secondary sourcing, could not be reconfirmed from the primary 5 Nov release.
- A same-day SOFR/EFFR funding print — not found on an authoritative NY Fed page; a third-party approx. 3.95% figure was not independently confirmed.
- Dealer gamma (zerogex.io, SpotGamma) — both remain unusable; no dated SPX/NVDA gamma levels for this session.
- Kitco historical gold/silver close — confirmed structurally unreachable (redirects to a live-quote page), a fourth straight failed edition.
