

Assumptions, corrections & scheduler status — read first

- Scheduler:** single clean fire (00:08:21 UTC, approx. 8 min after the 00:00 UTC slot), no duplicate, no gap — continuing the healthy run since edition 8's anomaly.
- Standing facts re-verified fresh:** Kevin Warsh remains Fed Chair (federalreserve.gov). Jackson Hole keynote **has now actually happened** (Fri 28 Aug, approx. 10am ET) — resolves edition 9's "still upcoming" status; it was the week's dominant catalyst.
- Correction:** the "approx. -911K" payroll-revision figure flagged unconfirmed since edition 9 is resolved — it belongs to *last year's* (Sept 2025) revision. This year's actual preliminary benchmark revision, released Fri 28 Aug, was -79,000 nonfarm / -178,000 private [11], itself a miss vs. a +183,000 upward-revision consensus.
- Correction:** the persistent "Micron after-hours move" open thread (carried since edition 8) is dropped — no Micron earnings event exists around 26 Aug 2026; its next report is 30 Sept 2026. Likely a misattribution to another chip name's print that week.
- Disclosed conflict:** BoJ September hike odds read inconsistently across sources this week (one read near 5%, sharply down from the approx. 80% carried previously) — not reconciled by cutoff; treated as unresolved rather than published as fact (Annex A).

60-second read

- Fed Chair Warsh turned hawkish at Jackson Hole** ("In Our Time," Fri approx. 10am ET), citing PCE inflation of 3.7% over 12 months / 4.1% over six [4] and warning the Fed has "work to do." September hike odds jumped from approx. 35% to 57-60% on CME FedWatch and to approx. 68-69% on Polymarket [16]; 2Y yield +6-12bp, 10Y +5bp, DXY +approx. 0.5% [7,32]. Equities pulled back Friday but still closed the week higher.
- PayPal was the single largest mover of the window, -12.71%**, after Advent International and Stripe abandoned their reported \$50bn+/approx. \$60.50-a-share pursuit of the company [19,20] — unwinding weeks of takeover speculation in one session.
- Chip-complex earnings kept fading into the hawkish tape:** Marvell fell a further 10.28% Friday (compounding Thursday's after-hours drop) on light FY28 guidance and vague Google TPU-deal timing despite a Q2 beat [22,23]; Nvidia gave back roughly half of Thursday's post-earnings spike, -4.57% [21].
- Thursday's SaaS earnings pops mostly faded Friday** — Okta -3.86%, CrowdStrike -4.19%, Veeva -1.93% [21] — except Salesforce, which extended its rally +2.45% on a new "Claudeforce" partnership with Anthropic [24].
- Growth data turned soft into the reset:** Chicago PMI cratered to 47.1 (cons. 57.9, weakest of the year, first contraction in four months) [9]; UMich sentiment's final August print ticked up from the mid-month flash but remained sharply below July [10]. That combination lands right before a pivotal week: ISM manufacturing Tue, ADP Wed, and nonfarm payrolls Fri 4 Sept (cons. +58K vs. July's -23K) [17] — the first hard read on the labor market since the hawkish pivot.

1 Market recap

S&P 500 7,711.76 -0.25% (day) / +0.45% (wk)	Dow Jones 53,559.99 -0.02% (day) / +0.49% (wk)	Nasdaq Comp. 26,402.42 -0.52% (day) / +0.83% (wk)	Russell 2000 2,972.37 -1.39% (day) / -1.33% (wk)	VIX 14.43 -0.55%, fresh 2026 low	10Y UST 4.72% +5bp
DXY 99.68 +0.5% (day) / +0.91% (wk)			WTI / Brent \$83.40 / \$89.31 -4.2% / -5.4% (wk)		

All figures Friday 28 Aug 2026 close unless noted [1,2,7,36]. Indexes fell Friday as Chair Warsh's hawkish Jackson Hole tone repriced the rate path, but all three major averages still closed the week higher — the pullback traced to rates and the dollar, not to a change in the earnings picture [3,6]. Weekly sector leaders: Information Technology +1.93%, Communication Services +1.46%, Financials +1.05%; laggards: Energy -2.26%, Health Care -2.23%, Industrials -1.70% (LPL weekly cut; a same-day 11-sector closing table remains unobtainable) [2]. No US market holiday falls this week — Labor Day is Monday 7 September, the following week.

2 Equities and earnings

PayPal — the week's largest single-name move

PayPal (PYPL) closed -12.71% at \$53.66 (intraday/premarket prints ran as deep as -14% to -17% before a partial recovery) after Bloomberg reported the Advent International-Stripe consortium abandoned its pursuit of the company, reported at roughly \$60.50/share and a \$53bn+ valuation [19,20]. PayPal's board reportedly never sent a formal counter, judging the price insufficient; both sides left the door open to revisit. The move unwinds weeks of takeover-speculation-driven gains in one session.

Chip complex: earnings out, guidance in charge

Marvell (MRVL) fell a further -10.28% to \$216.62 Friday, on top of Thursday's post-print after-hours drop — a Q2 beat (revenue/EPS up approx. 37-50% y/y) was overshadowed by a light FY28 revenue guide (approx. \$18bn) and no specificity on the timing or magnitude of its new Google custom AI-chip deal [22]. Sell-side split: B. Riley cut its PT to \$315 from \$345 (Buy maintained) while Needham raised its PT to \$300 from \$270 (Buy) [23] — the move was priced almost exactly by options (approx. 10.6% implied vs. approx. 10.3% realized, see Section 5). Nvidia (NVDA) closed -4.57% at \$217.55, giving back roughly half of Thursday's +8.74% post-earnings spike as the broader semiconductor complex sold off alongside Warsh's hawkish tone.

SaaS: Thursday's pops mostly faded, Salesforce the exception

Okta (-3.86% to \$166.23), CrowdStrike (-4.19% to \$218.40) and Veeva (-1.93% to \$276.69) gave back a portion of Thursday's outsized post-earnings gains — ordinary profit-taking, not new negative information [21]. Salesforce (CRM) was the exception, extending Thursday's rally +2.45% to \$258.21 on a newly announced "Claudeforce" partnership with Anthropic that lets sales teams pull Salesforce records and run tasks inside Claude, on top of Thursday's beat [24]. Workday (WDAY) reported its own beat Friday and rose +5.76% to \$204.72, though Capital One downgraded it to Equalweight the same day even as Piper Sandler raised its PT to \$190 [21,27]. Autodesk (ADSK) fell -3.67% to \$260.66 on a Q2 beat paired with light Q3/FY27 EPS guidance despite a revenue-guide raise [25].

Consumer & other movers

Gap (GAP) jumped +12.94% to \$23.48 on a beat-and-raise (adj. EPS \$0.52 vs. \$0.48 est.), though the strength was uneven — Gap-brand comps +10% and Banana Republic +3%, against Old Navy -4% and Athleta -12% [26]. Affirm (AFRM) gapped up as much as +10.2% premarket on a large fiscal-Q4 EPS beat but faded almost entirely to close +0.35%, after Marketbeat flagged the beat as driven largely by a one-time tax-allowance release rather than recurring earnings, with revenue actually missing consensus [23]. Moderna (MRNA) fell -3.35% despite a same-day Argus upgrade to Buy [28], consistent with Health Care's weak week. In energy, Chevron (+0.9%) and Halliburton (+2%+) rose on a WSJ report that both are nearing billion-dollar deals to invest in Venezuelan oil fields — a sub-5% move,

included for context only. No material weekend equity news (M&A, guidance, regulatory) surfaced beyond the items above; a targeted follow-up check found no incremental news on Thursday's consumer movers (Hormel, Wendy's, Build-A-Bear, Dollar General, Dollar Tree).

Chart 1 — Single-stock movers, Friday 28 Aug close vs. Thursday 27 Aug close [21]

3 Macro, policy and rates

Jackson Hole: Warsh's first keynote as Chair sets a hawkish tone

Fed Chair Kevin Warsh delivered his first Jackson Hole keynote as Chair Friday 28 Aug (approx. 10am ET), titled "In Our Time," marking his 100th day in office [4]. He said PCE inflation ran 3.7% over the past 12 months and 4.1% over the past six, with 54% of the PCE basket showing 12-month increases above 3% (vs. a pre-pandemic norm of 32%) — concluding "underlying trends have not meaningfully improved." Central line: "We must be confident that underlying inflation is moving to our objective, clearly and at sufficient speed. Otherwise, we have work to do" [5]. He reaffirmed 2% as "a firm, fixed target," argued current policy remains "stimulative" given nominal rates below nominal GDP growth, and rejected mechanical rate rules in favor of what he called "a discipline, not a decision" — while also criticizing a Fed/market "hall-of-mirrors" over-reliance on forward guidance and calling for a "quieter Fed." He cited capex growth of approx. 9% annualized (fastest since 2021), S&P 500 profit growth above 20% y/y and 4.1% unemployment as evidence of underlying strength, and flagged AI as a potential "new factor of production," announcing new Fed task forces on its productivity and employment effects.

Market reaction was immediate: September hike odds on CME FedWatch jumped from approx. 35% pre-speech to 57–60% by the close (sources cluster in that range); Polymarket moved further, to approx. 68–69% [16]. The 2-year Treasury yield rose approx. 6–12bp to approx. 4.30–4.35%, the 10-year +approx. 5bp to 4.72–4.73%, the 30-year +approx. 1.6bp to 5.206% [7]. DXY rose approx. 0.5% to approx. 99.68 — the FX/commodity-market mechanics of that move are in Section 4. Elsewhere at the symposium, ECB officials (Slovenia's Dolenc, Austria's Kocher) struck a hawkish tone favoring a September ECB hike, while BOE Governor Bailey was more cautious, citing a softening UK labour market; Lagarde and BOJ Governor Ueda skipped the symposium for G20 meetings [8].

Data: a soft-and-mixed pair, then a downward payroll-benchmark surprise

Chicago PMI collapsed to 47.1 in August against a 57.9 consensus and July's 57.6 — a 10.8-point miss and the first contraction reading in four months [9]. University of Michigan sentiment's final August print rose to 51.7 from the mid-month flash of 51.0, but remained down sharply (approx. –6%) from July's final 55.2; 1-year inflation expectations eased to 4.0% from 4.3% at the flash, with 5–10-year expectations flat at 3.3% for a third month [10]. Separately, the BLS's preliminary annual benchmark revision (released Fri 28 Aug) cut nonfarm payrolls for the 12 months to March 2026 by 79,000 and private payrolls by 178,000 — the seventh downward benchmark revision in eight years, and a miss against a consensus that had expected a +183,000 upward revision [11] (see disclosure box for the correction to a stale "approx. –911K" figure that had been circulating).

Trade and sanctions: unresolved, and reportedly under-delivering

The US-Canada tariff standoff carries no new weekend development — the US's approx. \$20bn of 22 Aug tariffs and Canada's approx. \$20bn retaliation remain set to take effect 8 September [13]. On Iran, Treasury/FinCEN moved Friday to cut off correspondent-banking access for Banque Misr's UAE branch over an alleged \$1.8bn in processed Iranian shadow-banking flows [14], but a Sunday Bloomberg piece assessed the week-old "Operation Economic Outcast" campaign as "mostly shrugged off" — China continues taking roughly 90% of Iran's oil exports, UAE-based Iranian bank branches remained operational, and Turkey and Pakistan both signaled they see no obligation to comply, with a former Treasury official quoted saying the measures announced "do not match the hype" [15].

The week ahead: FOMC odds near a coin flip into a marquee payrolls print

September 16 FOMC pricing has moved to a genuine two-way debate and, notably, disagrees across venues: CME FedWatch shows approx. 57–59% hike probability while Polymarket and Kalshi both show approx. 48–52% (Sunday 30 Aug, approx. 5:24pm UTC snapshot) [16] — disclosed as a range given the cross-platform spread rather than forced to one figure. That pricing now sits directly ahead of a data-dense week: ISM Manufacturing PMI Tuesday (cons. 55.2 vs. July's 55.6) and JOLTS; ADP employment Wednesday (cons. +47K vs. July's +44K) and the Fed's Beige Book; ISM Services and jobless claims Thursday; and nonfarm payrolls Friday 4 Sept (cons. +58K vs. July's shock –23K) [17,18] — the first hard confirmation or unwind of this week's hawkish repricing. No US market holiday falls in the window; Labor Day is the following Monday, 7 September.

4 Commodities and FX

Oil: a weekly loss, and Friday's hawkish dollar added an extra push down

WTI settled Friday at \$83.40 (–0.16% day, –4.2% week); Brent at \$89.31 (–0.43% day, –5.4% week) [29]. The Brent–WTI spread widened to approx. \$5.91 from approx. \$4.75 previously. The week's decline traces mainly to reports that Iran and Oman outlined a phased framework for a temporary Hormuz shipping corridor, pulling geopolitical premium out of the market; Warsh's dollar-strengthening speech added incremental Friday pressure by raising costs for non-dollar buyers [29]. The Strait itself remains rated "severe risk" by the UK Maritime Trade Organization over the weekend, with roughly 6,000 sailors reported stranded in the Gulf and no Hormuz deal confirmed as finalized by cutoff [30] — treat any Monday Hormuz-deal headlines as a live, developing story. Natural gas eased 0.89% to \$2.888/MMBtu; no new EIA storage report fell inside this window (next due 3 Sept) [34].

Gold and silver reversed hard on the Warsh speech

Both metals were firm into the speech (gold approx. \$4,608–4,656, silver +3.33% to \$70.62 in early trading) and reversed sharply afterward: gold settled –2.88% at \$4,529.90 (Comex Dec futures) / –3.14% at \$4,456.00 (spot, Kitco PM) [31]; silver closed –4.24% at \$66.21 (Kitco PM) [31] — a swing of roughly 7–8 points intraday, in each case tracing directly to the hawkish rate-odds repricing described in Section 3. Copper held little-changed at \$6.5915/lb (+0.03%), continuing to retreat (approx. 3% off) from Wednesday's intraday Comex record of \$6.7775/lb as Chinese industrial-profit growth slowed to 11.2% y/y in July from 15.1% in June [33]. Platinum's Friday settlement could not be verified (Annex A).

Dollar firmer, yen and euro softer

DXY rose to approx. 99.68 (+0.5% day, +0.91% week) on the hawkish repricing [32,34]. EUR/USD fell to approx. 1.1583 (–0.61%), its lowest since 19 Aug; GBP/USD eased to 1.3535 (–0.43%); USD/JPY rose to approx. 160.10 (+0.43%) — a separate 147.20 print from one FX source was checked against three others

and discarded as unreliable [34]. USD/CAD's Friday close could not be independently confirmed (last confirmed 1.3882, Thursday); the pair remains a live watch into Canada's 8 September retaliatory tariffs. Bitcoin fell -3.3% to \$77,678 immediately on the rate-odds repricing before stabilizing near \$78,024 over the weekend [35], consistent with continued but slowing ETF-driven demand.

5 Derivatives, volatility and positioning

VIX closed at 14.43 (-0.55%), a fresh rolling 2026 low, even as the Jackson Hole surprise repriced rates and the dollar sharply [36]. Term structure stayed in firm, broadly unchanged contango (VIX9D 11.22, VIX3M 17.48, VIX6M 20.30; VIX/VIX3M ratio 0.825) — but VVIX (86.63, +4.31%) and SKEW (149.77, +3.82%) both rose, the more telling tell of the day: vol-of-vol and tail pricing picked up modestly even as spot VIX stayed pinned at cycle lows, consistent with hedging demand quietly building into next week's payrolls print and the 16 Sept FOMC rather than any front-month stress [36]. Marvell's options market priced its earnings reaction almost exactly — an approx. 10.6% implied move against a realized approx. 10.3% decline [38].

CFTC Commitment of Traders data (as of Tue 25 Aug, released Fri 28 Aug) showed asset managers trimming their net-long ES and RTY positioning modestly while adding slightly to NQ; leveraged funds — still net short all three, the standing dealer/systematic-hedge posture — added to their ES short (net -315,204, from -281,402) while meaningfully covering NQ shorts (net -41,232, from -61,771) and trimming the RTY short marginally (net -97,700, from -99,786) [37]. Net shifts were modest relative to book size — no capitulation or chase in either direction for the week. Funding stayed unremarkable: SOFR's most recent published print is 3.64% (Thu 27 Aug, standard one-day lag); the ON RRP award rate held flat at 3.50% with Friday take-up of just \$175mn, down from Thursday's \$456mn — the floor remains non-binding [39].

Chart 2 — CFTC net futures positioning, Asset Managers vs. Leveraged Funds, ES/NQ/RTY: data as of 25 Aug vs. 18 Aug [37]

6 The day ahead

Date	Event	Consensus / prior
Mon 31 Aug	Month-end; China NBS PMIs; German flash CPI; Japan retail sales	Light US calendar day
Tue 1 Sept	ISM Manufacturing PMI (Aug); JOLTS (Jul); Eurozone flash CPI; Fed's Barr speaks	ISM cons. 55.2 vs. Jul 55.6
Wed 2 Sept	ADP employment (Aug); factory orders; FOMC Beige Book; BoC, RBNZ decisions	ADP cons. +47K vs. Jul +44K
Thu 3 Sept	ISM Services PMI (Aug); jobless claims; trade balance; Fed H.4.1; Fed's Waller speaks	—
Fri 4 Sept	Nonfarm payrolls (Aug); Canada jobs; BOE's Bailey, ECB's Lane speak	Cons. +58K vs. Jul -23K

Sector setup we take into the week

- **Rates-sensitive growth (SaaS, semis):** earnings quality was mostly fine this cycle (MRVL, NVDA, CRM, CRWD, OKTA, WDAY all beat), but the group is now trading against a materially higher discount-rate path post-Warsh — guidance quality (MRVL's vague Google-deal timing, ADSK's light Q3 EPS guide) is being punished harder than usual in that context.
- **Payrolls-week positioning:** with September FOMC odds now genuinely split (57–60% CME vs. approx. 50% on prediction markets) and a downward benchmark revision already on the tape, Friday's NFP carries outsized weight to confirm or unwind this week's hawkish move — expect vol-of-vol (already ticking up per Section 5) to keep building into it rather than front-month VIX itself.
- **Dollar-sensitive commodities (gold, oil):** both reversed hard on Warsh's tone; a further hawkish confirmation from payrolls would extend the pullback, while a soft print could snap gold/silver and oil back quickly given how compressed the Friday reversal was.
- **Cross-border trade names (autos, steel, dairy exposed to Canada):** 8 September's Canadian retaliatory-tariff effective date is now inside the coming two weeks — worth flagging as a live event risk window opening.

Annex A — Could not be verified this edition

- Platinum's Friday 28 Aug settled close (only a pre-speech morning snapshot, approx. \$1,889.40, was found).
- USD/CAD's confirmed Friday 28 Aug close (last confirmed level is Thursday's 1.3882).
- BoJ September rate-hike odds as a specific figure — sources disagree sharply (approx. 5% vs. an approx. 80% figure carried previously) and were not reconciled.
- Post-earnings dealer-gamma/GEX follow-up for NVDA and MRVL — only pre-event positioning notes were locatable, not a post-print resolution.
- Exact unemployment-rate and average-hourly-earnings consensus figures for the 4 Sept nonfarm payrolls release.
- Precise day/time for Fed regional presidents Hammack's and Goolsbee's remarks this week (directionally confirmed on the calendar, timing not pinned down).
- A direct, dated oil-price reaction specifically tied to the "sanctions mostly shrugged off" story (Sunday's Bloomberg piece contained no price data).
- Exchange-certified (CME/ICE) settlement prices for WTI, Brent, gold, silver, copper and natural gas — vendor-reported snapshots were used throughout, as in every prior edition.
- A same-day, closing 11-sector GICS table and closing market breadth — unobtainable at close in every edition to date; a weekly LPL cut was used instead.
- Official CME FedWatch tool data directly (page blocks automated fetching) — secondary trackers (CME-sourced via news coverage, Polymarket, Kalshi) were used and disclosed as a range.
