Daily Economic Briefing

Tuesday 13 October 2026 | Window: Sun 11 Oct 2026 20:00 ET – Mon 12 Oct 2026 20:21 ET (Mon 12 Oct close/AH) | Research cutoff 12 Oct 2026, 20:21 ET | Edition 40

Assumptions, corrections and status this edition

- Monday 12 October 2026 was the Columbus Day holiday: equities and commodities traded a full session, but the Treasury market and SOFR/EFFR fixings were closed, so this edition's funding and yield figures repeat Friday's last marks.[30]
- Every commodity and FX %-change below is computed directly off this report's own logged Friday 9 Oct close, not the vendor's own stated daily-change field, per standing method — several vendors' own fields used Sunday's thin pre-open print as their base instead. Oil was the exception: WTI and Brent both reconciled cleanly against their own vendor-stated % this session — the first time both grades have agreed in several editions.[21]
- AP's wire for Monday's index closes could not be fetched directly (HTTP 403 on two syndication mirrors); the figures below were recovered via search-engine snippet, cross-checked against a dated Yahoo Finance/Motley Fool close article and stockanalysis.com, and reconcile exactly against Friday's logged closes.[1][2][3]
- zerogex's SPX dealer-gamma feed, which has carried a staleness caveat for two straight editions, returned an authentication-required API error and a blank public page this edition — a harder failure than previously logged. No SPX gamma figure is reported this edition.[28]

60-second read

1. A genuine value/growth split on Columbus Day: the Dow added +0.38% to 51,850.55 while the Nasdaq Composite fell -0.44% to 27,245.90 and the S&P 500 slipped -0.06% to 7,807.24, as a renewed memory-chip and AI-hardware selloff (Micron -3.88%, Sandisk -5.97%, Nvidia -1.29%) offset broad-based strength elsewhere — 8 of 11 SPDR sectors still closed higher.[1][7]
2. A second tier of smaller tech names took the real damage: Cerebras -10.69%, Semtech -10.15%, Ciena -9.95%, Lumentum -9.78%, Applied Optoelectronics -8.17% and Coherent -7.87%, while Fastly reversed nearly all of Friday's unexplained +15.86% spike (-9.80%). None of these has a confirmed company-specific driver — all remain open threads.[6]
3. Rate-path odds firmed modestly hawkish for the first time in several editions: DeFi Rate's blended Kalshi/Polymarket aggregator put October 27-28 hike odds at approx. 18% (up from approx. 16% Sunday) and December 8-9 odds at approx. 75%.[11]
4. Oil's long-running vendor-%-reconciliation problem cleared up for both grades at once: WTI -0.92% and Brent -0.86%, each matching our own computed figure exactly — the first clean dual reconciliation logged in this report's history.[21]
5. Earnings season opens Tuesday with JPMorgan, Goldman Sachs, Citigroup, Wells Fargo, Bank of America, Morgan Stanley, Johnson & Johnson and UnitedHealth all reporting before the open — the market's first big Q3 read ahead of Wednesday's September CPI print.[34]

1. Market recap

S&P 500	Dow Jones	Nasdaq Comp.	Russell 2000	VIX	DXY
7,807.24	**51,850.55**	**27,245.90**	**2,794.48**	**15.21**	**102.375**
-0.06%	+0.38%	-0.44%	-0.45%	+2.49%	+0.35%*

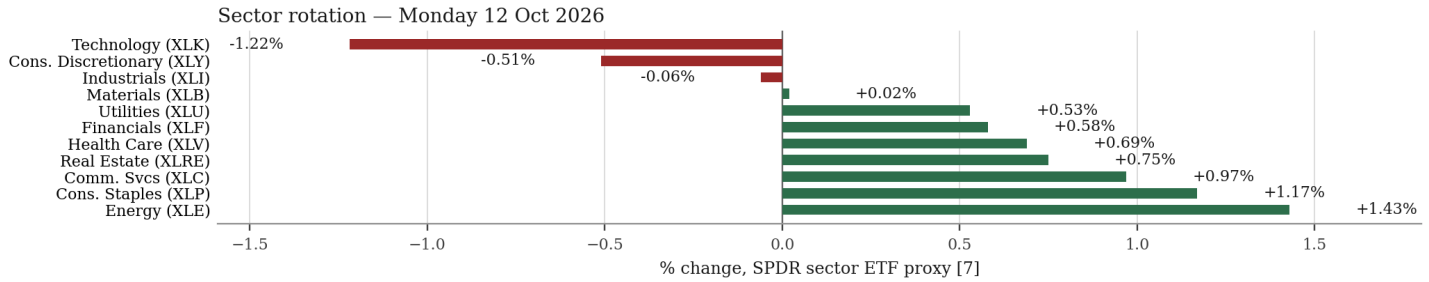

WTI crude	Gold spot
$92.88	**$4,173.28**
-0.92%	-0.50%*

Monday 12 October was Columbus Day — a full equities and commodities session with the Treasury market and SOFR fixings closed.[30] Indexes split along value/growth lines: the Dow added +0.38% to 51,850.55, a record close, while the Nasdaq Composite fell -0.44% to 27,245.90 and the S&P 500 slipped -0.06% to 7,807.24 — all three figures reconcile exactly against Friday's logged closes.[1][2][5] Eight of eleven SPDR sector ETFs closed higher — Energy (+1.43%) and Consumer Staples (+1.17%) led — while Technology (-1.22%) and Consumer Discretionary (-0.51%) lagged as a renewed memory-chip and AI-hardware selloff weighed on the index; Industrials was effectively flat (-0.06%).[7] VIX rose to 15.21, up a manually-computed +2.49% — the CBOE feed's own percent field matched our recompute for the first time in several editions, with neither of the feed's two known calculation bugs present this session.[27]

2. Equities and earnings

Sector rotation and the memory-chip drag

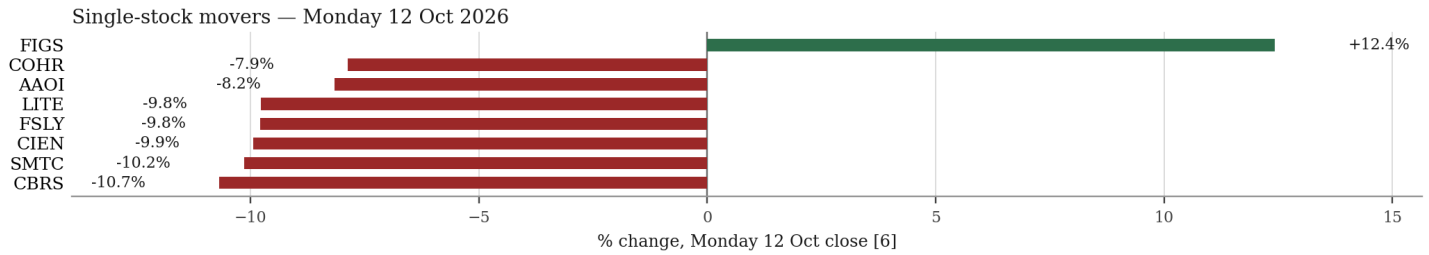

The index-level split traced directly to chipmakers: CNBC's dated Monday coverage named memory-chip weakness as the specific drag on the Nasdaq, with Micron -3.88% and Sandisk -5.97% leading, joined by Marvell -3.42%, Intel -3.20%, Nvidia -1.29% and Nokia -4.44%.[4] That weighed on Technology (-1.22%) even as Energy, Consumer Staples, Communication Services, Real Estate, Health Care, Financials and Utilities all closed green.[7]

Single-stock movers

A second, sharper AI-hardware/photonics pullback hit smaller names: Cerebras -10.69%, Semtech -10.15%, Ciena -9.95%, Lumentum -9.78%, Applied Optoelectronics -8.17% and Coherent -7.87% — the latter two framed by a dated Yahoo Finance close article only as "investors pulled back from AI stocks, erasing the prior week's

gains," with no company-specific catalyst identified for any of the six.[8] Fastly fell -9.80%, reversing nearly all of Friday's unexplained +15.86% spike; neither move has a confirmed driver despite a genuine search, extending that open thread for a second session.[6] FIGS was the session's lone large gainer, +12.42%, though the only cited driver — "a positive industry review" — names no analyst or firm and is not independently confirmed.[8]

Ticker	Move	Driver
FIGS	+12.42%	Cited only as "a positive industry review" by a single aggregator; firm/analyst not identified — unconfirmed, see Annex A
CBRS (Cerebras)	-10.69%	No company-specific driver found; part of the broader AI-hardware pullback
SMTC (Semtech)	-10.15%	No company-specific driver found; same broad pullback
CIEN (Ciena)	-9.95%	No company-specific driver found; same broad pullback
FSLY (Fastly)	-9.80%	Reversed most of Friday's unexplained +15.86% spike; no driver found for either move
LITE (Lumentum)	-9.78%	AI-photonics profit-taking, per a dated but non-specific Yahoo close article
AAOI (Applied Optoelectronics)	-8.17%	Same AI-photonics profit-taking framing
COHR (Coherent)	-7.87%	Same AI-photonics profit-taking framing

Elsewhere: telecom names that sold off Friday on the SpaceX/Grain spectrum story bounced Monday — T-Mobile +2.21%, Verizon +2.71%, Crown Castle +1.72%, AT&T +1.40% — but no dated Monday article was found explaining the stabilization, so it is reported without a confirmed catalyst.[3] Moderna fell -5.00% with no Monday-dated news; the only located analyst action against it, a Citigroup Sell rating, is dated 30 September and too stale to explain this move.[3] Meta (+3.38%) and Salesforce (+2.09%) both carried cited drivers — an AI product launch and an analyst upgrade respectively — that could not be independently verified this edition (see Annex A) and are reported here without endorsing the stated cause.[8] No major US company reported earnings Monday; Tuesday's bank-and-healthcare slate opens the quarter (Section 6).[32] No analyst action dated specifically to 12 October could be independently confirmed for any name this edition — a legitimate empty result, not a sign of a broken search.

3. Macro, policy and rates

Standing facts re-verified fresh, all unchanged: Kevin Warsh remains Fed Chair, confirmed directly against the Board of Governors' own bios page.[9] The next FOMC meeting is 27-28 October (decision and press conference 2:30pm ET Wednesday), confirmed directly against the Fed's own calendar.[10] The Bank of England holds at 3.75%, next decision Thursday 5 November, re-confirmed directly.[13] The Bank of Japan's policy rate stands at approx. 1.25% (hiked 18 September), next meeting 29-30 October — corroborated this edition via secondary sources (securities.io, MNI) rather than a direct plain-text primary read, a modest step down in verification rigor from recent editions worth re-tightening next time.[14][15] The government remains funded through 11 December 2026 under H.R. 6500, re-confirmed directly against the dated whitehouse.gov statement permalink; no new shutdown/CR news this window.[16]

Rate-path odds firmed modestly hawkish: DeFi Rate's Kalshi/Polymarket blend, snapshot Monday 12 Oct 8:24pm ET, shows October hike odds approx. 18% (hold approx. 81-82%, cut approx. 2%) and December hike odds approx. 75% — up from Sunday's approx. 16% October / approx. 73-74% December reads, the first directional move logged in several editions, though still within normal noise.[11] Kalshi's own direct fetch again returned HTTP 429, now a confirmed standing failure mode across four consecutive editions.[12]

China's September CPI/PPI still had not posted as of a direct stats.gov.cn fetch, which continues to show August data only; a secondary source's 14 October estimate remains uncorroborated by any primary calendar.[17][18] This week's data: September CPI Wednesday 14 Oct, PPI Thursday 15 Oct, Import/Export Price Indexes Friday 16 Oct, all 8:30am ET per BLS's own dated schedule.[19] University of Michigan's final October consumer-sentiment reading is due 23 October; the preliminary print was 46.3, a five-month low.[20]

4. Commodities and FX

Instrument	Level	Chg	Note
WTI crude (Nov '26, CLX6)	$92.88/bbl	-0.92%	Computed matches vendor-stated exactly — clean reconciliation
Brent crude (Dec '26, LCOZ6)	$105.73/bbl	-0.86%	Computed matches vendor-stated exactly — first clean dual-grade reconciliation in many editions
Gold spot	$4,173.28/oz	-0.50%*	Vendor's own daily figure (-0.41%) is based on Sunday's close, not Friday's
Silver spot	$60.2530/oz	-0.95%*	Vendor's own daily figure (-1.12%) also uses a Sunday base
Copper (LME cash)	$14,822.00/tonne	+0.91%	Westmetall.com; no vendor % field to compare against
Henry Hub nat gas (Nov '26, NGX6)	$3.180/MMBtu	-1.24%*	Vendor's own daily figure (+0.25%) uses a Sunday base
DXY	102.375	+0.35%*	A late-window live quote showed a trivial -0.04% tick against its own just-set "previous close" — not a statement about Monday's actual move
EUR/USD	1.1160	-0.37%*	Dollar stronger vs. euro
GBP/USD	1.3209	-0.20%*	Dollar stronger vs. sterling
USD/JPY	158.53	+0.12%*	Same direction as DXY for a second consecutive session, extending Friday's pause in the prior divergence pattern

*Computed directly off this report's own logged Friday 9 October close, per standing method, rather than the vendor's own stated daily-change field.[21][22][23][25][26] Kitco's gold/silver quotes worked again this edition (after failing the prior two) but are secondary color only, roughly $8/oz and $0.21/oz below the Investing.com figures used above with no disclosed prior-close reference.[24]

Treasury yield curve (last available — bond market closed Columbus Day)

Maturity	Yield	Dated
2-year	4.80%	Friday 9 Oct 2026 close, last available (Monday's market was closed)
10-year	5.24%	Friday 9 Oct 2026 close, last available
30-year	5.60%	Friday 9 Oct 2026 close, last available

No fresh par-yield print exists for Monday 12 October — Columbus Day closed the Treasury cash market, so these levels, carried forward from the prior edition's logged close, remain the active marks until Tuesday's reopen.[5][30]

5. Derivatives, volatility and positioning

CBOE's delayed-quotes feed gave a clean, fresh sweep, all timestamped Monday 12 Oct: VIX 15.21 (+2.49% manually computed), VIX9D 11.68 (+3.73%), VIX3M 17.93 (+0.90%), VIX6M 19.95 (+0.45%), VVIX 85.93 (+1.24%), SKEW 155.06 (+0.47%). Neither of the feed's two known calculation bugs (duplicated prior-close, mis-based percent field) was present this session — the manual recompute matched the feed's own percent field across all six series.[27] The VIX9D-VIX inversion narrowed slightly to -3.53 from Friday's -3.58; the rest of the curve stayed in contango (VIX9D < VIX < VIX3M < VIX6M).[27] zerogex's SPX dealer-gamma read was unavailable this edition — the API returned an authentication-required error and the public page showed only blank placeholders with no timestamp, a harder failure than the stale-snapshot caveat logged the past two editions.[28] No dated Monday single-stock options-flow or unusual-activity commentary was found for any name despite a genuine search. CFTC's Commitments of Traders report carries no fresh data this window — the next release is due Friday 16 October, covering Tuesday 13 October positioning; the prior report (Friday 9 Oct, covering Tuesday 6 Oct) remains the latest available, with Asset Managers net long and Leveraged Funds net short across ES, NQ and RTY.[29] SOFR remains frozen at 3.87% (the Oct 8 fixing); Columbus Day's bond-market closure delayed the Oct 9 print, which will post Tuesday (EFFR 3.88%, OBFR 3.88%, both also dated Oct 8).[30]

6. The day ahead

Date	Event	Consensus / context
Tue 13 Oct, pre-open	Q3 earnings: JPMorgan, Goldman Sachs, Citigroup, Wells Fargo, Bank of America, Morgan Stanley, Johnson & Johnson; UnitedHealth also due	Options markets were pricing implied moves of roughly 5-9% for several of these names as of 8 Oct per Finviz — a stale read, treat as approximate context only, not a Monday-dated figure[31][34]
Tue 13 Oct	NFIB Small Business Optimism Index	Secondary-sourced consensus approx. 98 vs. prior 98.7; not independently confirmed against NFIB's own release
Wed 14 Oct, 8:30am ET	September CPI	Week's headline print, ahead of the 27-28 Oct FOMC meeting[19]
Thu 15 Oct, approx. 2:00am ET	TSMC Q3 2026 earnings call	Quiet period runs 5-14 Oct per TSMC's own IR filing; Monday's broad semis/AI-hardware weakness may reflect de-risking, though no article directly ties the two[33]
Thu 15 Oct, 8:30am ET	September PPI; September retail sales	Retail sales timing is secondary-sourced (Census Bureau release, not on the BLS schedule page)[19]
Fri 16 Oct, 8:30am ET	Import/Export Price Indexes	Also the next CFTC CoT report, covering Tue 13 Oct positioning[19][29]
Thu 23 Oct	UMich final October consumer sentiment	Preliminary was 46.3, a five-month low[20]
Fri 30 Oct, 8:30am ET	Q3 Employment Cost Index	—[19]
Tue 27 - Wed 28 Oct	FOMC meeting	Decision and press conference 2:30pm ET Wednesday[10]

Sector setup we take into Tuesday's session

- Financials lead the tape first: JPMorgan, Goldman Sachs, Citigroup, Wells Fargo, Bank of America and Morgan Stanley all report before Tuesday's open, setting the tone for the broader Q3 season.
- Technology/semis remain searching for a bottom: Monday's memory-chip and AI-photonics selloff (Micron, Sandisk, Cerebras, Semtech, Ciena, Fastly, Lumentum, Applied Optoelectronics, Coherent) has no confirmed fresh catalyst — watch for a delayed explanation, as happened with Caterpillar's driver surfacing one edition late in early October.
- Telecom's Monday bounce (T, TMUS, VZ, CCI) lacks a dated catalyst — worth confirming it isn't just dip-buying ahead of Wednesday's CPI print rather than a genuine stabilization.
- Rates: the Treasury market reopens Tuesday after the Columbus Day closure; Friday's levels (10-yr 5.24%) are the last marks on the board until then, with Wednesday's CPI the week's key rates catalyst.

Annex A — Data points sought but not verified this edition

- Fastly's Friday +15.86% spike and Monday -9.80% reversal: no dated driver found for either move despite a genuine search.
- Cerebras, Semtech, Ciena and Coherent/AAOI/LITE's Monday declines: driver only generic ("broad AI-stock pullback"), no company-specific catalyst identified for any of the six.
- Telecom's Monday bounce (T +1.40%, TMUS +2.21%, VZ +2.71%, CCI +1.72%): price moves confirmed, no dated article found explaining the stabilization.
- Moderna's Monday -5.00% move: no Monday-dated catalyst found; the only located analyst action (Citigroup Sell, $80 PT) is dated 30 Sept, too stale to explain this move.
- FIGS +12.42%: cited driver ("a positive industry review") names no analyst or firm.
- FICO +10.85% and CCC Intelligent Solutions +8.12%: FICO's driver unconfirmed; CCC's price is single-aggregator-sourced only and excluded from the body.
- Meta's +3.38% move: a secondary aggregator cited an AI-model-launch driver under a product name that could not be verified against Meta's confirmed product line; excluded from the stated cause.
- Salesforce's +2.09% move: a cited analyst-upgrade driver's specific firm and price target could not be confirmed as dated 12 October.
- eBay: reported as a "top analyst pick" by a single aggregator with no percentage move or firm name given; excluded entirely.
- China's September CPI/PPI: still not posted per a direct stats.gov.cn fetch; the secondary 14 October estimate remains uncorroborated by any primary NBS calendar.
- SPX dealer gamma (zerogex): unavailable this edition; the API returned an authentication-required error and the public page showed blank placeholder values.
- Single-stock options-flow/unusual-activity commentary: no dated Monday source found for any name.
- WTI/Brent were single-sourced to Investing.com this edition; no second vendor (oilprice.com, TradingEconomics) returned a confirmed Monday settlement in search.
- Options-implied earnings moves for Tuesday's bank slate (Finviz, approx. 5-9%) are dated 8 October, not Monday — included only as approximate, stale context.
