Daily Economic Briefing

Tuesday 3 November 2026 | Window: Sun 1 Nov 2026 20:00 ET – Mon 2 Nov 2026 20:21 ET (Mon 2 Nov close/AH, the window's one NYSE session) | Research cutoff 20:21 ET | Edition 55

60-second read

1. Crude collapsed 7–11% on signs of a US–Iran diplomatic thaw — the session's single largest move — dragging Energy to sector-laggard status even as the move reads as broadly risk-on elsewhere.
2. The major indices split hard on composition, not breadth: the Dow rose 0.41% while the S&P fell 0.51% and the Nasdaq fell 1.07%, even though 8 of 11 sectors closed higher — Technology and Energy, both overweight in the cap-weighted gauges, did the damage.
3. Apple beat on revenue and EPS but fell on a soft margin outlook; Intel extended Friday's historic collapse with another 8.80% drop; Oracle fell 8.76% on a $20bn AI-capex debt-and-equity raise; Marvell's all-stock Lumentum deal (approx. $115bn including debt) sent both stocks sharply lower the same day (Marvell −12.72%, Lumentum −18.59%).
4. Fed December-meeting hike odds firmed to approx. 72–73% (from approx. 70% last edition); the RBA, Riksbank and BoE all have decisions pending in the next three sessions, none yet landed.
5. VIX jumped 8.9% to 21.15 with a genuinely kinked term structure — backwardated inside 30 days, still in contango beyond — consistent with a same-day reversal shock rather than a structural stress signal.

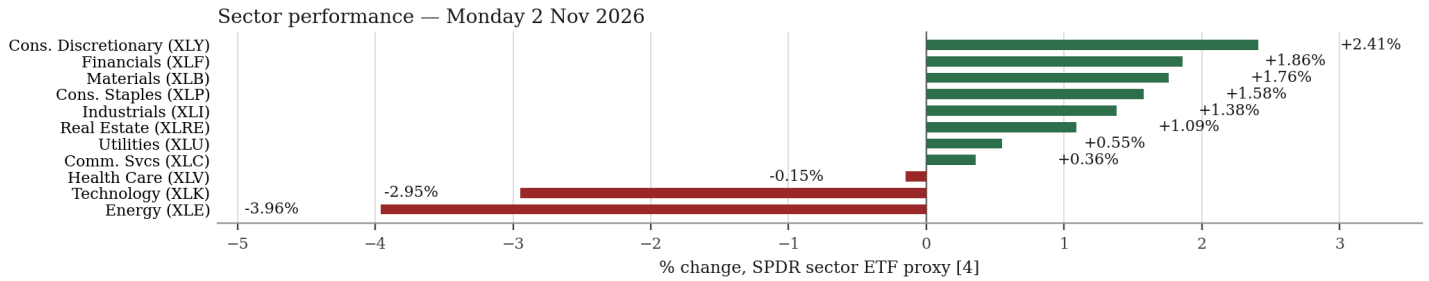

1. Market recap

S&P 500	Dow Jones	Nasdaq Comp.	Russell 2000	VIX	10-yr UST
7,541.40	**51,983.98**	**25,164.32**	**2,805.88**	**21.15**	**4.91%**
−0.51%	+0.41%	−1.07%	−0.21%	+8.91%	−3bp

WTI crude	Gold
$96.42	**$3,957.55**
−7.40%	+1.50%

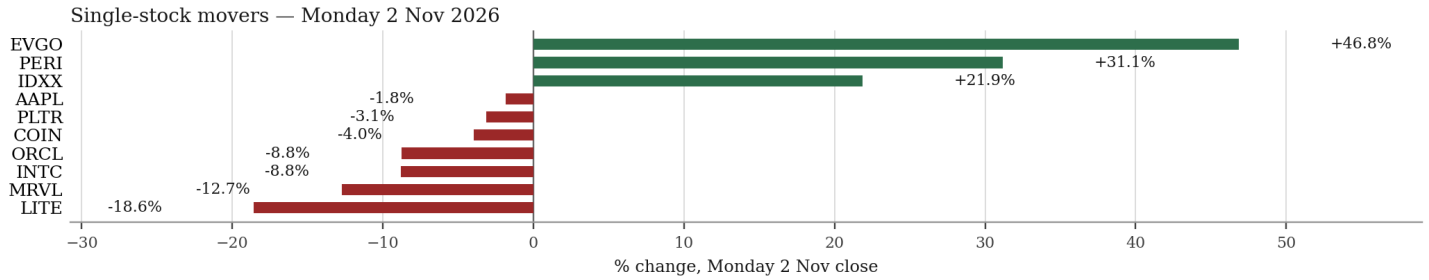

Equities diverged sharply Monday. The Dow Jones Industrial Average rose 0.41% to 51,983.98, a third straight advance, while the S&P 500 fell 0.51% to 7,541.40 (a third straight loss and its lowest close since 31 July) and the Nasdaq Composite dropped 1.07% to 25,164.32. The Russell 2000 slipped 0.21% to 2,805.88.[1] Neither AP's nor Reuters' own wire page was directly retrievable for Monday; an AP-wire mirror syndicated through the Argentine outlet La Nación again supplied the full "How major US stock indexes fared" content, cross-checked against SPY/DIA/QQQ/IWM ETF proxies (QQQ, which tracks the Nasdaq-100 rather than the Composite, fell a sharper 1.36%)[2] and a second, independent close recap.[3] The split was a function of index composition, not breadth: 8 of 11 SPDR sector ETFs closed higher, but Technology and Energy — both heavily weighted in the cap-weighted gauges — dragged the headline indices into the red.

Sector performance

Consumer Discretionary (XLY +2.41%) led for a second consecutive session, followed by Financials (+1.86%), Materials (+1.76%) and Consumer Staples (+1.58%); Real Estate, Utilities, Communication Services and Health Care were little changed. Energy (XLE −3.96%) was the clear laggard as crude collapsed on the Iran diplomacy signal (Section 4), followed by Technology (XLK −2.95%), pressured by Intel's continued slide and the Marvell-Lumentum shock (Section 2).[4]

2. Equities and earnings

Apple reported fiscal Q4 2026 results Monday: revenue of $114.5bn (+12% y/y, above the approx. $113.5bn Street consensus) and diluted EPS of $2.10 (+14% y/y, including a $0.05 one-time tariff-refund benefit), per the company's own SEC Form 8-K.[5] iPhone revenue was $57.6bn, Services hit an all-time high of $31.6bn, and gross margin was 47.9%. Shares fell 1.83% in the regular session to $338.32 (already soft into the print) and extended the loss after hours to $329.03, down a further approx. 2.75%.[6] Secondary reporting citing CNBC attributes the after-hours reaction to a soft gross-margin outlook for the December quarter — tied to rising memory

(DRAM/NAND) costs — and iPad sales coming in below estimates;[7] Apple's own specific December-quarter guidance figures were not located in the material reviewed (Annex B).

Intel extended Friday's historic 28.58% collapse with a further 8.80% drop to $59.97, a fresh multi-month low.[8] Freedom Broker cut its price target to $90 from $100 (Buy rating maintained); a shareholder-rights law firm separately issued a securities-investigation notice citing the string of post-guidance downgrades.[9] No single new Monday-specific catalyst beyond continued digestion of Friday's guidance shock was identified.

Oracle fell 8.76% to $119.22 after disclosing a $20bn capital raise ($10bn common stock plus $10bn bonds) to fund AI-infrastructure spending, with the equity tranche reported to price at an approx. 11% discount.[10] The market's treatment of large-tech AI financing diverged notably: Alphabet, which separately announced a euro-denominated bond issuance the same day, was not penalized the same way — context from a single secondary report, not independently re-verified.[11]

Marvell agreed to acquire optical-components maker **Lumentum** in an all-stock deal reported at approx. $115bn including debt (an earlier-circulating headline cited approx. $80bn, likely an equity-only figure — both are disclosed rather than one silently dropped). Both stocks fell hard: Marvell −12.72% to $171.41, Lumentum −18.59% to $684.40. BofA downgraded Marvell to Neutral from Buy, cutting its price target to $225 from $400; Stifel downgraded Lumentum to Hold.[12]

Palantir beat decisively — Q3 revenue +96% y/y to $2.313bn, with US commercial revenue exceeding government revenue for the first time, and raised full-year guidance — yet fell 3.13% to $178.34 (after-hours −2.98% to $173.02),[13] the latest instance of this report's standing finding that a clean beat-and-raise carries no predictive power for the market's reaction. Context points to a broader, roughly three-week AI-stock pullback (cited at approx. $5tn of value) rather than a Palantir-specific flaw.[14]

Crypto-adjacent names continued absorbing Friday's approx. $6.3bn Binance hack. Coinbase fell a further 3.98% to $137.83;[15] Strategy (MicroStrategy) was little changed, +0.19% to $130.76.[16] Bitcoin traded around $77,000, down roughly 1% on the session per two corroborating sources that did not permit a precise two-day percentage calculation.[17] Binance said it had now covered approx. 95% of the affected amount, with net AUM outflows of approx. 2.1% since the breach — a genuine incremental update on Friday's figures, not a restatement.[14]

Smaller movers: EVgo +46.83% ($1.85) on a $2.00/share LS Power buyout proposal; Perion +31.15% ($11.41) on an agreed Affle acquisition at $11.70/share; IDEXX Laboratories +21.85% on a Q3 beat and raised guidance; Tempus AI +8.67% on a Q3 beat and raised guidance; XPeng +5.86% on record October deliveries (50,237 vehicles, +20% y/y); Check Point −6.98% on a Q3 revenue miss; Kosmos Energy −13.33% on a Q3 loss and a lower Q4 output guide. Airlines rallied on the oil plunge's lower fuel-cost implications: United +4.80%, Delta +4.08%, American +3.81%.[3] After-hours movers on fresh Monday earnings, too recent for a regular-session reaction: Backblaze +38.78%, Aehr Test Systems +13.99%, Fabrinet +10.44%[3] — this batch is single-sourced and not independently cross-verified name-by-name (Annex A).

3. Macro, policy and rates

Central bank	Policy rate	Last change	Next decision
Federal Reserve	3.75%–4.00%	+25bp, 16 Sept 2026 (held 28 Oct, 10-2 dissent)[41]	8–9 Dec 2026 (SEP)
Bank of Japan	approx. 1.25%	+25bp, 18 Sept 2026 (held 29-30 Oct, 8-1 dissent)	17–18 Dec 2026[18]
Bank of England	3.75%	held, 17 Sept 2026 (6-3 vote)	5 Nov 2026 (pending)[19]
European Central Bank	depo 2.50% / refi 2.65% / lending 2.90%	held since 16 Sept 2026	est. mid-Dec 2026 (unconfirmed)[20]
Bank of Canada	2.50%	+25bp, 28 Oct 2026	9 Dec 2026
Reserve Bank of Australia	4.60%	+25bp, 29 Sept 2026	3 Nov 2026 (pending)[21]
Swiss National Bank	0.00%	held, 24 Sept 2026	10 Dec 2026[22]
Norges Bank	4.50%	+25bp, 24 Sept 2026	17 Dec 2026
Riksbank	1.75% (secondary only)[23]	held since 30 Sept 2026	4 Nov 2026 (pending)[24]
Banxico	6.50% (secondary only)[25]	held since 24 Sept 2026	not confirmed

The ECB's 2.50%/2.65%/2.90% complex was reconfirmed directly against ecb.europa.eu for a third consecutive edition (effective 16 Sept 2026, no change) — per this report's own methodology this is now **promoted to SETTLED**; it reopens only on contradiction, the next Governing Council decision, or the monthly audit.[20] BoJ's and SNB's next-meeting dates, both open since the prior edition, are now directly confirmed: 17–18 December 2026 and 10 December 2026 respectively.[18][22] Riksbank's current rate value could not be reconfirmed directly for a second straight edition (riksbank.se's dedicated rate page 404'd again); its next decision is scheduled for Wednesday 4 November. Banxico's current rate and next-decision date remain unconfirmed directly for the same reason; one unverified analyst note floated a possible 5 November decision with a 25bp-cut call, not corroborated and not reported as fact. The RBA's own decision, due 2:30pm AEDT Tuesday (approx. 10:30pm ET Monday), had not posted as of this window's cutoff, confirmed directly against rba.gov.au.[21]

Fed December-meeting rate-path odds firmed to approx. 72–73% for a further 25bp hike (approx. 25–26% hold), per a direct Polymarket Gamma-API pull and the DeFi Rate blended aggregator — up from approx. 70% hike at the prior edition.[26][27] DeFi Rate's own internal Kalshi decision-table-vs-rate-level-contract gap persisted a ninth straight edition but narrowed to roughly one point, from a materially wider gap previously. No shutdown is in effect: H.R. 6500 funds federal agencies through 11 December 2026, reconfirmed directly against whitehouse.gov.[28] No new dated Federal Register filing on the US-China tariff framework was found; the site's search interface remains blocked.

4. Commodities and FX

Instrument	Level (Mon 2 Nov)	Chg vs. Fri 30 Oct	Note
WTI crude	$96.42/bbl	−7.40%	[29]
Brent crude	$104.77/bbl	−10.94%*	*wire reports cite ">7%", different base[29][30]
Henry Hub (NGZ6, Dec)	$2.865/MMBtu	−1.14%	single-sourced, provisional[29]
Gold (futures / Kitco spot)	$3,957.55 / $3,956.60	+1.50%	[31][32]
Silver (futures / Kitco spot)	$50.685 / $50.32	+2.86%	[31][32]

Copper (LME cash / 3-mo)	$14,380.00 / $14,242.00	−0.48% / −0.06%	[33]
Copper (COMEX)	$6.5435/lb	+0.95%	secondary cross-check[34]
DXY (true spot / futures-proxy)	101.81 / 101.62	+0.06% / −0.12%	disagree on direction[35][36]
EUR/USD	1.1187	+0.24%	[37]
GBP/USD	1.3410	+0.13%	[37]
USD/JPY	157.95	+0.25%	[37]
UST 2-year	4.59%	+3bp	[38]
UST 10-year	4.91%	−3bp	[38]
UST 30-year	5.28%	−3bp	[38]

Crude's collapse was the session's dominant commodity story: comments from Iran's president that its supreme leader had authorized peace talks with the US, with both Washington and Tehran signalling openness to diplomacy, unwound much of the "war premium" built into the tape through October.[30] Gold and silver rose despite the broadly risk-on tone, with Kitco's live spot cross-check agreeing closely with the futures close for both metals — the vendor-retroactive-revision pattern that hit gold/silver bases for four straight prior editions did **not** recur this edition; every Friday base re-fetched this run matched the previously logged figure exactly. Henry Hub remains single-sourced to Investing.com for a fifth consecutive edition after CME, Barchart and EIA were all attempted again and failed or lagged. DXY's true spot (Yahoo Finance, succeeding for the first time in four editions) disagrees on direction with both the futures-proxy and UUP (−0.14%); EUR/USD and GBP/USD both rose against the dollar while USD/JPY also rose, a genuinely mixed cross-currency picture disclosed rather than resolved.

5. Derivatives, volatility and positioning

VIX jumped 8.91% to 21.15, VIX9D rose a sharper 16.68% to 22.46, VIX3M rose 3.95% to 21.60 and VIX6M rose 2.12% to 22.67; VVIX rose 3.80% to 110.47 and SKEW rose a modest 2.02% to 152.78 — all computed manually against Friday's closes per standing policy, with the feed's own reported percent-change matching the manual calculation to four decimal places on all six series for the first time in recent memory (the known duplicated-prev-close and mis-divided-percentage bugs were absent this run; the manual-calculation discipline continues regardless).[39] The resulting term structure is genuinely kinked: VIX9D (22.46) sits above both VIX (21.15) and VIX3M (21.60) — backwardation inside 30 days — while VIX3M–VIX6M remains in ordinary contango. That pattern reads as a same-day reversal/vol-pop (the S&P swung from an early gain to a loss intraday) rather than a structural stress signal. No new CFTC Commitment of Traders data fell inside this window; the next report is due Friday 6 November, covering Tuesday 3 November data.[40] Single-stock options flow/skew tied to Monday's movers, SOFR/EFFR/ON RRP levels, and dealer gamma (zerogex.io, spotgamma.com) were all sought and not obtained this edition (Annex B).

6. The day ahead

Date	Event	Consensus / context
Tue 3 Nov	RBA policy decision, 2:30pm AEDT (approx. 10:30pm ET)	current rate 4.60%; outcome not yet known
Tue 3 Nov	AMD Q3 earnings (after close)	consensus EPS approx. $1.96 (secondary, unconfirmed vs. IR)
Wed 4 Nov	ISM Services PMI (October)	consensus not independently confirmed
Wed 4 Nov	Riksbank policy decision	current rate 1.75% (secondary-sourced); outcome not yet known
Wed 4 Nov	Caterpillar (before open); Qualcomm (after close)	consensus EPS approx. $7.03 / approx. $2.20 (secondary)
Thu 5 Nov	Bank of England policy decision	current rate 3.75%; outcome not yet known
Fri 6 Nov	CFTC Commitment of Traders (covering Tue 3 Nov data)	—
Fri 6 Nov	October US employment report (if on schedule)	consensus not yet available

Sector setup we take into Tuesday

- Energy's plunge tracks an Iran/US diplomatic signal not yet confirmed by any official government statement; watch whether WTI's break below $100 holds or mean-reverts.
- Technology remains pressured by Intel's continued slide and the Marvell-Lumentum unwind; watch chip-supply-chain and optical names for further read-across.
- Financials, Industrials and Consumer Discretionary led Monday's rotation; watch whether the Dow's divergence from the S&P/Nasdaq persists.
- Crypto-adjacent names (Coinbase, Strategy) are still digesting Friday's Binance hack; Binance's own recovery update is incremental, not a resolution.

Annex A — Assumptions, corrections and status

- No correction this edition: nothing published in a prior edition was found to be wrong.
- Apple's specific December-quarter (fiscal Q1 2027) guidance figures were not sourced from a primary document; the margin/iPad explanation for the after-hours decline rests on secondary aggregation citing CNBC, not a direct read.
- Brent's Monday % change is disclosed with two methodologies: −10.94% on an Investing.com settle-to-settle calculation against the confirmed Friday $117.64 base, vs. wire coverage describing "more than 7%" that appears to use a different prior-session basis (likely a front-month contract-roll effect). Both land on the same $104.77 Monday print; the computed figure is used in the body as the better-controlled calculation.
- DXY's true-spot read succeeded for the first time in four editions via Yahoo Finance (101.81) but carries a date-stamp ambiguity on the source page; it disagrees on direction with both the futures-proxy (101.62) and UUP (−0.14%). All three are disclosed rather than one being silently chosen.
- Henry Hub natural gas remains single-sourced to Investing.com for a fifth consecutive edition; CME, Barchart and EIA were all attempted again this edition and all failed or lagged.
- The gold/silver/copper/FX vendor-retroactive-revision pattern that recurred for four straight prior editions did not recur this edition — every Friday base re-fetched this run matched the previously logged figure exactly. Noted as a positive development, not yet grounds to drop the every-edition check.
- The CBOE VIX feed's two known bugs (duplicated prev_day_close; mis-divided price_change_percent) were absent on all six series this edition for the first time in recent memory. The manual-calculation discipline continues regardless of this result.
- The Marvell-Lumentum deal value is reported at approx. $115bn including debt; an earlier-circulating approx. $80bn figure (likely equity-only) is noted rather than dropped.
- ECB's rate complex was directly reconfirmed for a third consecutive edition and is promoted to SETTLED per this report's standing methodology; it reopens on contradiction, the next Governing Council decision, or the monthly audit.
- BoJ's and SNB's next-decision dates, open since the prior edition, are now both directly confirmed.
- The Bank of England's 5 November decision date was reconfirmed via secondary calendar corroboration this edition, not independently re-fetched directly against bankofengland.co.uk — worth a direct fetch next edition.
- Smaller single-stock movers (EVgo, Perion, IDEXX, Tempus AI, XPeng, Check Point, Kosmos Energy, and the three after-hours reporters) are sourced to a single aggregator (StockTitan) and were not individually cross-verified against a primary filing or second source, unlike Apple, Intel, Oracle, Marvell, Lumentum, Palantir, Coinbase and Strategy, each independently verified directly against stockanalysis.com.
- Alphabet's euro-bond issuance (cited as context for the divergent Oracle/Alphabet financing reaction) is single-sourced and was not independently re-verified.

Annex B — Data points sought but not verified this edition

- Apple's fiscal Q1 2027 (December-quarter) specific revenue/margin guidance figures.
- EchoStar's confirmed regular-session close (only a premarket approx. +5% figure was found; not carried into the report).
- Drivers for Compass Pathways (−27.31%), Precigen (−25.94%) and Sigma Lithium (−25.57%) — magnitude found via a single aggregator, no driver or second source found; excluded from the body.
- SOFR/EFFR/ON RRP levels for Monday 2 Nov — the NY Fed's HTML reference-rate pages showed no live print; the Markets Data API was not attempted this edition.
- Exact date(s) this week for Fed speakers Hammack and Barkin — named in a secondary weekly calendar, not confirmed against the Fed's own calendar.
- October 2026 US employment report consensus figure — not yet available ahead of the expected Friday 6 Nov release.
- Riksbank's current policy-rate value (1.75%) — riksbank.se's dedicated rate page 404'd again; secondary-sourced only.
- Banxico's current policy rate (6.50%) and next-decision date — both banxico.org.mx and its mirror failed; secondary-sourced only. A speculative note on a possible 5 Nov decision/cut is unconfirmed.
- NYSE/Nasdaq closing breadth — standing permanent gap; the 8-of-11-sectors-higher read is the best available proxy.
- Dealer gamma (zerogex.io, spotgamma.com) — both remain fully unusable.
- Single-stock options flow/skew/implied-vs-realized-move data tied to Monday's movers — none found, an 18th-plus largely empty edition on this sub-item.
- A historical-average FOMC-day move benchmark — standing gap, not re-attempted.

Method: every figure traces to a named source in Annex C; where sources disagreed, the better-corroborated figure was used and the conflict disclosed. Nothing estimated or filled from memory — unverifiable items are listed in Annex B. Not investment advice.
