Daily Economic Briefing

Tuesday 27 October 2026 | Window: Sun 25 Oct 2026 20:00 ET – Mon 26 Oct 2026 20:20 ET (Mon 26 Oct close/AH, the window's one NYSE session, preceded by a weekend with no trading) | Research cutoff approx. 8:20pm ET Mon 26 Oct 2026 | Edition 50

60-second read

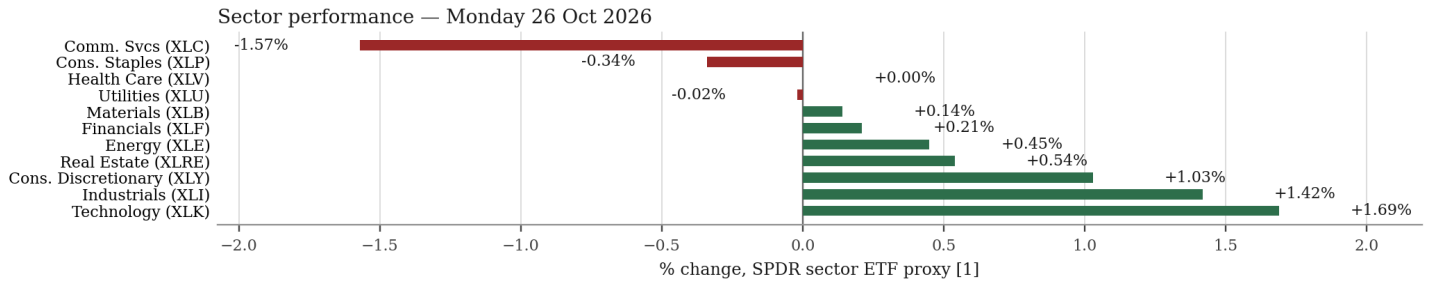

1. Equities rallied broadly as Friday's oil-driven risk-off reversed: S&P 500 +0.70% to approx. 7,676.77, Nasdaq Composite +0.82% to 26,169.38, Dow +0.28% to approx. 52,362, led by a chip/AI-driven Technology rally (+1.69%, the session's clear sector leader) — though a secondary-sourced claim tying the rally to an Anthropic IPO filing could not be independently confirmed against a primary filing.
2. The FOMC's October 27-28 decision is now 1-2 days out: blackout holding, no leak found; rate-path odds price a hold at approx. 93% for Wednesday versus a December hike at approx. 74-77%. The Bank of Canada (Wed), ECB (Thu) and Bank of Japan (Thu-Fri) all decide the same week — a genuinely stacked global central-bank calendar.
3. The Bank of Japan's exact policy rate — unconfirmed via primary source for five straight editions — is finally resolved: 1.25% (complementary deposit facility rate), effective 24 September 2026, confirmed directly against boj.or.jp.
4. Two merger-driven single-stock moves dominated the tape: HealthSpan Partners' $5.7bn, $23.50/share take-private of Surgery Partners (+47.62%) and EQT's all-stock acquisition of Range Resources (+17.66%), both confirmed via the companies' own SEC filings. Verizon fell -3.49% despite an EPS beat and a third consecutive guidance raise, on a revenue miss — another same-session instance of this report's standing "a beat doesn't guarantee a positive reaction" lesson.
5. Oil gave back part of Friday's spike (WTI -1.72%, Brent -0.86%) and the VIX complex unwound sharply (-5.45% to 18.39, VVIX -7.54%) as the one-day risk-off reversed. A large, unresolved vendor revision to Friday's logged Brent close (previously published at $116.72, now reading $111.70 from the same vendor) is flagged in Annex A and could not be independently reconciled.

1. Market recap

S&P 500	Dow Jones	Nasdaq Composite	Nasdaq-100 (QQQ proxy)	Russell 2000 (ETF proxy)	VIX
7,676.77	**52,361.58**	**26,169.38**	**$712.20**	**approx. 2,786**	**18.39**
+0.70%	+0.28%	+0.82%	+1.11%	+0.38-0.45%	-5.45%

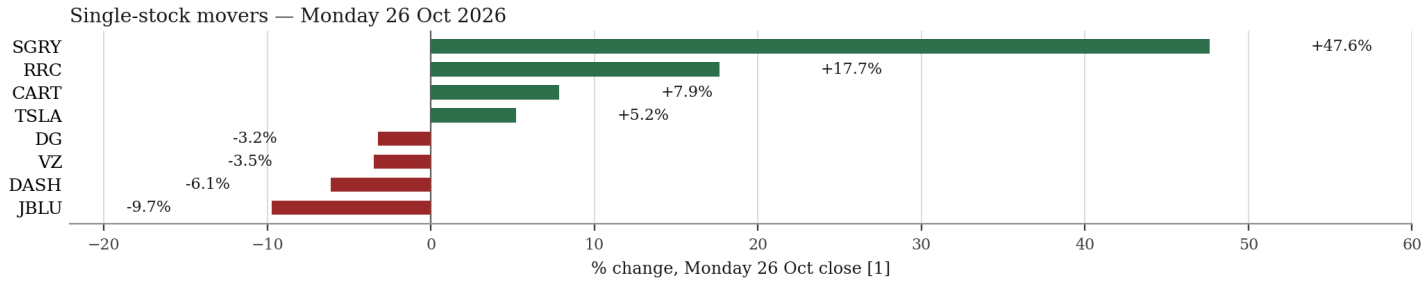

US equities rallied broadly Monday, reversing most of Friday's narrower risk-off move. Neither AP's wire nor Reuters' updated wrap was indexed/fetchable for Monday 26 Oct by cutoff — a third straight edition of this gap — so index closes were built from stockanalysis.com's SPY/DIA/QQQ/IWM ETF-proxy data, cross-checked against two direct-index snapshots (fool.com for the S&P 500 and Nasdaq Composite, whose quoted "previous close" fields matched this report's own logged Friday 23 Oct figures exactly, confirming freshness) and FRED's daily DJIA series[1][2][3], with a secondary outlet's market review (Investrade) used as a further cross-check, particularly for the Dow and Russell 2000[4]. The Nasdaq-100 has no direct-index snapshot available this edition and is reported as QQQ-proxy-derived only (+1.11%); the Russell 2000 similarly remains ETF-proxy-derived (IWM +0.45%), with Investrade's own direct figure (+0.38%) close but not identical — both disclosed as a range rather than forced to agree.

Sector performance

8 of 11 SPDR sector ETFs closed higher, a broad-based session[1]. Technology (XLK, +1.69%) led on a chip/AI rally — Micron +2.98%, AMD +2.80%, Broadcom +2.33% and Nvidia +2.39% all confirmed directly against stockanalysis.com's own price tables[1]. Secondary commentary attributed part of the move to a reported Anthropic IPO filing dated 26 Oct 2026[4]; a direct search of SEC EDGAR and Anthropic's own site found no corresponding public S-1 filing, only confirmation that a confidential draft registration existed as of June 2026 with the public filing still described as pending as of September — this claim is reported as unverified and goes in Annex B rather than as an established catalyst. Industrials (+1.42%) and Consumer Discretionary (+1.03%) also led. Communication Services (XLC, -1.57%) was the clear laggard, driven by Verizon's -3.49% post-earnings decline (see Section 2) and a -1.88% drop in Meta Platforms amid recirculating, unconfirmed reports of a large AI-funding equity raise (one secondary figure cited approx. $95bn; this report could not independently verify any such raise or its size against a primary filing, and flags it in Annex B)[4]. Consumer Staples (-0.34%) and Utilities (-0.02%) were little-changed; Health Care (XLV) closed exactly flat (0.00%), verified as a genuine unchanged print via differing intraday open/high/low rather than stale data[1].

2. Equities and earnings

Ticker	Move	Driver
SGRY (Surgery Partners)	+47.62%	Definitive agreement for HealthSpan Partners (a Bon Secours Mercy Health affiliate) to acquire Surgery Partners for $23.50/share cash (approx. $5.7bn enterprise value); Bain Capital affiliates roll their stake into the acquiring entity rather than cash out. Confirmed via Surgery Partners' own Form 8-K, Exhibit 99.1, filed 26 Oct 2026[5].
RRC (Range Resources)	+17.66%	EQT Corporation's definitive all-stock merger: Range holders receive 0.987 EQT shares each; pro forma enterprise value over $50bn, EQT holders approx. 73% / Range holders approx. 27% of the combined company. Confirmed via EQT's own Form 8-K/425, filed 26 Oct 2026[6].
CART (Instacart/Maplebear)	+7.87%	Reports of advanced merger talks with DoorDash (secondary-sourced; not independently confirmed against a filing by either company)[4].
TSLA (Tesla)	+5.21%	A reported Barclays upgrade to Overweight, single-sourced and not independently cross-confirmed[4]; price move itself verified directly[1].
DG (Dollar General)	-3.22%	Reported FTC and 20-state lawsuit alleging overcharging practices (single-sourced; not independently verified against an FTC release)[4].
VZ (Verizon)	-3.49%	GAAP EPS $1.25, adjusted EPS $1.31 (both beats), revenue $34.3bn +1.5% y/y (missed approx. $34.85-34.9bn consensus); guidance raised for a third straight quarter. Regular-session close fell despite the beat-and-raise — no sourced explanation beyond the revenue shortfall was found. Confirmed via Verizon's own Form 8-K, Exhibit 99[7].
DASH (DoorDash)	-6.10%	Falling as the reported acquirer in the CART merger talks above (secondary-sourced)[4]; price move verified directly[1].
JBLU (JetBlue Airways)	-9.71%	Reported restructuring-adviser/creditor talks, single-sourced and not independently confirmed[4] — note a separate secondary aggregator claimed a -13% move; the stockanalysis.com-verified figure of -9.71% is used here[1].

Other earnings since Friday 23 Oct's close: Cadence Design Systems (CDNS) reported after Monday's close: GAAP EPS $1.05 (flat y/y), non-GAAP EPS $2.11 (vs. $1.93 y/y, beating its own $2.01-2.07 guidance), revenue $1.633bn (+22% y/y, above guidance), and raised FY26 guidance. After-hours reaction: +2.62% to $330.60 as of 7:59pm ET — a clean positive reaction to a clean beat-and-raise, the opposite pattern from Verizon the same day[8]. Exxon Mobil, Chevron, AbbVie and Newell Brands have not yet reported per a direct SEC EDGAR check; all remain expected around 30 October 2026[9].

Analyst actions (Monday 26 Oct): beyond the Tesla/Barclays item above, a single secondary roundup also reported UBS/Ross Stores, TD Cowen/Booz Allen (both upgrades), and Wells Fargo/FICO, Morgan Stanley/Block, JPMorgan/First Citizens, RBC/Equifax (all cuts)[4] — none found in a second, independent outlet; treat as low-confidence.

Open threads: AT&T's disputed Wednesday 21 Oct close (-6.45% vs. a third-party's -6.1%) remains unresolved[10]. Equifax's unexplained Thursday 22 Oct +6.59% rally leg also remains uncatalyzed after a further search pass found only an unrelated, differently-dated Oct 20 and Oct 14 move[10].

3. Macro, policy and rates

Central bank	Policy rate	Last change	Next decision
Federal Reserve	3.75%-4.00%	+25bp, 16 Sept 2026, unanimous 12-0	27-28 Oct 2026 (decision approx. 2:00pm ET Wed)
Bank of England	3.75%	Held, 17 Sept 2026, 6-3 vote	5 Nov 2026
Bank of Japan	1.25%	+25bp, 18 Sept 2026 (eff. 24 Sept), 7-2 vote	29-30 Oct 2026
European Central Bank	2.50% (deposit facility)	Held, eff. 16 Sept 2026	approx. 28-29 Oct 2026 (press conference confirmed 29 Oct)
Bank of Canada	2.25% (going into decision)	n/a this window	28 Oct 2026, approx. 9:45am ET
Norges Bank	4.50%	+25bp, 24 Sept 2026	17 Dec 2026
Riksbank	1.75%	Held, eff. 30 Sept 2026	not re-confirmed this edition
Swiss National Bank	0%	Held, 24 Sept 2026	10 Dec 2026
Reserve Bank of Australia	4.60%	+25bp, decision 29 Sept / eff. 30 Sept 2026, unanimous	not re-confirmed this edition
Banxico	6.50%	Held, 24 Sept 2026, unanimous	unavailable — not re-confirmed

The FOMC's October 27-28 meeting is now 1-2 days from its decision; the blackout window (17-29 Oct) was reconfirmed holding with no Fed-speaker commentary or leak found[11]. Rate-path odds (DeFi Rate's blended Kalshi/Polymarket aggregator, snapshot dated Mon 26 Oct, approx. 8:29pm ET): Wednesday's decision prices a hold at approx. 93% (hike approx. 7%); December 8-9 odds showed the same internal page-vs-table inconsistency logged for four straight editions, reading approx. 74% hike on the page's headline figure versus approx. 77% on its own standalone table — both point to markets pricing a further hike by year-end[12]. Kalshi's own direct fetch failed again (HTTP 429), a 14th consecutive failure; official CME FedWatch also failed again (timeout), a 10th consecutive failure — both remain structural access gaps rather than transient. The Bank of Japan's long-unresolved policy rate is now closed: boj.or.jp's own English-language site confirms the uncollateralized overnight call rate target at approx. 1.25%, with the complementary deposit facility rate at 1.25% and the basic loan rate at 1.5%, both effective 24 September 2026[13] — its Oct 29-30 meeting remains undecided as of this window. The ECB's exact Governing Council meeting start date (28 Oct) remains secondary-sourced; a direct ecb.europa.eu fetch confirmed only the 29 Oct press-conference date, not the Council's own meeting-day text[14]. The Reserve Bank of Australia's current rate was re-confirmed directly via rba.gov.au, which states the 25bp hike to 4.60% took effect 30 September 2026 (the decision itself was announced 29 Sept, a one-day decision-vs-effective-date distinction, not a contradiction of prior editions)[15]. Riksbank's rate was finally extracted directly from its own known-working URL: held at 1.75%, effective 30

September 2026[16]. Norges Bank's and the SNB's current rates are carried forward as settled[10]; their next decisions were confirmed directly at 17 December 2026 and 10 December 2026 respectively[17][18]. Banxico's next decision date remains unavailable. The Bank of England's 5 November 2026 next decision was directly re-confirmed via its own "upcoming MPC dates" page, now under two weeks out[35]. US government funding was reconfirmed via the standing whitehouse.gov URL: H.R. 6500 funds federal agencies through 11 December 2026, no shutdown in effect[19]. New Mexico v. Meta's long-open stay-of-enforcement question now has a plausible resolution: research this edition found Meta is party to two distinct New Mexico Unfair Practices Act matters — an earlier, separate approx. $942m judgment (original plus a $567m add-on), for which Meta posted an $1.8bn bond and received an unopposed stay around 9 October 2026, and the headline $25bn Cambridge Analytica judgment issued by Judge Francis Mathew on 21 October 2026, i.e. after that stay was granted[20][21]. Since the $25bn judgment did not yet exist when the stay was granted, it is unlikely the 9 Oct stay covers it — though this is an inference from the timing, not a direct confirmation, and no formal notice of appeal of the $25bn judgment has been located in any source, now a fourth straight edition unconfirmed[22].

4. Commodities and FX

Instrument	Level	Chg (vs. Fri 23 Oct)	Note
WTI crude	$101.49	-1.72%	Friday's base re-fetched unrevised at $103.27
Brent crude	$110.74	-0.86%	Friday's base returned $111.70 on re-fetch vs. this report's previously-published $116.72 — see Annex A
Henry Hub nat. gas (NGZ6, Dec)	$3.029	-0.69%	Front month already rolled to December ahead of NGX6's 28 Oct expiry; OHLC internally consistent
Gold (futures)	$4,018.65	+0.27%	Friday's base unrevised at $4,007.90; Kitco spot $4,011.00, a normal small basis below futures[33]
Silver (futures)	$53.928	-0.04%	Friday's base unrevised at $53.949
Copper (LME cash)	$14,500.00/t	+0.59%	Friday's base unrevised at $14,415.00/t[34]; COMEX secondary cross-check unavailable this edition
DXY	102.02	+0.21%	
EUR/USD	1.1174	-0.26%	
GBP/USD	1.3345	-0.21%	
USD/JPY	157.54	+0.43%	Dollar strength agrees with DXY for a 6th straight session
2-year Treasury	4.68%	-1bp	
10-year Treasury	5.00%	flat	
30-year Treasury	5.31%	-2bp	

All levels and Friday-base re-fetches sourced to Investing.com's close-to-close history tables, except where noted[23]. One methodological note: Investing.com inserts an electronic Sunday-evening print for every 24-hour-traded instrument in this table, so the site's own displayed "Monday change" is actually Monday-vs-Sunday-evening, not Monday-vs-Friday — every change above was recomputed directly from the raw Friday and Monday closing prints rather than taken from the site's own change column. Oil pulled back from Friday's spike alongside the broader risk-on reversal. Henry Hub's front-month identity and OHLC consistency were both re-checked and found clean, with the December 2026 contract (NGZ6) already quoted as front month a few days ahead of the November contract's 28 October expiry — a normal vendor convention, not a data error[24]. Treasury par yields were sourced directly from home.treasury.gov and matched this report's previously-logged Friday base exactly, extending a clean reconciliation streak to 15 editions[25]; Trading Economics' page did not surface extractable dated history this round (only a current snapshot), so the usual cross-check is incomplete rather than contradicted this edition[26].

5. Derivatives, volatility and positioning

The VIX complex unwound sharply Monday as Friday's event-driven pop reversed: VIX -5.45% to 18.39, VIX9D -4.17% to 17.92, VIX3M -2.64% to 19.94, VIX6M -1.50% to 21.63, VVIX -7.54% to 101.43, SKEW -0.55% to 150.97 — all series confirmed fresh via CBOE's own delayed-quotes feed, with neither of the feed's two known intermittent bugs (a duplicated prev-close field; a change-percent field that divides by the wrong base) present this time[27]. The term structure stayed in contango (VIX9D < VIX < VIX3M < VIX6M) but compressed, with the front end falling fastest — consistent with a broad de-risking of Friday's event hedges rather than a new shock, and tracking the equity rally rather than diverging from it. No notable single-stock options-flow or skew commentary tied to Monday's movers or to FOMC positioning was found, continuing a long run of low yield on this sub-item. Dealer gamma remains fully unusable: zerogex.io loaded but returned placeholder dashes with no timestamped data (an 11th straight failure), and SpotGamma's dashboard remains a client-side app with no server-rendered data (a 5th straight failure). Positioning/volatility was not judged to be the dominant story of the session, so no third chart is used this edition. CFTC's most recent Commitment of Traders report (covering Tuesday 20 Oct data) was already fully covered in the prior edition; the next report is due Friday 30 October 2026, 3:30pm ET, covering Tuesday 27 October data — confirmed directly against cftc.gov's release schedule, with nothing new available in this window[28]. SOFR/EFFR/OBFR fixings for Monday are not yet published as of cutoff (the New York Fed typically posts with a one-business-day lag); the most recent available prints remain Friday 23 Oct's: SOFR 3.92%, EFFR 3.88%, OBFR 3.88%[29].

6. The day ahead

Date	Event	Consensus / context
Tue 27 Oct	FOMC meeting, day 1	No decision expected
Wed 28 Oct	Bank of Canada decision (approx. 9:45am ET); FOMC decision (approx. 2:00pm ET) and press conference (approx. 2:30pm ET)	Fed: approx. 93% priced for a hold[12]; BoC going in at 2.25%[30]
Thu 29 Oct	BEA Q3 2026 GDP advance estimate and September 2026 PCE price index, both 8:30am ET; ECB decision (approx. 14:15 CET / 9:15am ET); BoJ meeting, day 1	BEA's own schedule confirms both releases same-day, resolving a prior secondary-source suggestion of a 4 Nov PCE date[31]; no consensus figures gathered this edition
Fri 30 Oct	BoJ decision; CFTC CoT report, 3:30pm ET (covering Tue 27 Oct data)	BoJ's exact rate decision may extend or reset the now-closed primary-source gap on its current rate
approx. 30 Oct	Exxon Mobil, Chevron, AbbVie, Newell Brands expected to report Q3 earnings	Not yet reported as of this edition[9]

approx. 31 Oct	China October NBS manufacturing PMI	Secondary-sourced date only, not independently confirmed via stats.gov.cn this edition[32]

Sector setup we take into Tuesday's session

- Technology enters FOMC week on Monday's chip/AI-led leadership, but the rally's most-cited catalyst (an Anthropic IPO filing) is unconfirmed — watch for either a primary filing or a fade absent one.
- Communication Services carries fresh weakness into the week from Verizon's revenue-miss reaction and unconfirmed Meta capital-raise chatter.
- Energy gave back only a modest slice of Friday's oil-driven spike (XLE +0.45% Monday even as crude fell) — a divergence worth watching.
- Rates-sensitive sectors (Financials +0.21%, Real Estate +0.54%, Utilities -0.02%) showed little directional conviction Monday — a stacked central-bank week (Fed, BoC, ECB, BoJ) is likely to dominate cross-asset direction into Friday.

Annex A — Assumptions, corrections and status

- Neither AP's wire nor Reuters' updated wrap was indexed/fetchable for Monday 26 Oct by cutoff, a third straight edition of this gap; index closes rest on stockanalysis.com ETF-proxy data cross-checked against fool.com and FRED direct-index snapshots, plus Investrade as a secondary market-review cross-check.
- **Brent crude's Friday 23 Oct base was found materially revised on re-fetch**: previously published here at $116.72 (+3.14%, edition 49); the same vendor (Investing.com) now returns $111.70 (+2.80%) for the identical date — an approx. 4.3% discrepancy, far larger than prior vendor-revision instances (typically under 1pp). No independent settlement report for that date was found, so this report cannot determine which figure was correct; Monday's -0.86% change is computed against the freshly-fetched $111.70 base for consistency. Recommend an independent cross-check (ICE, EIA) at a future edition. By contrast, WTI, gold, silver, copper, EUR/USD, GBP/USD and USD/JPY all reconciled exactly against this report's previously-logged Friday figures — a reversal from edition 49's broader revision pattern — and the Treasury curve remains the one instrument class with no vendor-revision conflict across every edition checked, now 15 straight clean editions.
- New Mexico v. Meta: this edition distinguished two separate matters — an earlier approx. $942m judgment (subject to the 9 Oct 2026 stay, on an $1.8bn bond) and the later, separate $25bn Cambridge Analytica judgment (21 Oct 2026). Timing (judgment postdates the stay) makes it unlikely the stay applies to the $25bn figure, but this is an inference, not a confirmation, and is not treated as a correction.
- The Bank of Japan's numeric policy rate, unconfirmed for five straight editions (45-49), is now resolved via a direct boj.or.jp fetch (approx. 1.25%, eff. 24 Sept 2026) — closing a standing sourcing gap.
- Henry Hub's NGX6-to-NGZ6 front-month roll, flagged as upcoming last edition, is confirmed to have already occurred in vendor quoting, ahead of NGX6's actual 28 Oct expiry.
- Russell 2000 and Nasdaq-100 both lack a direct-index snapshot this edition; reported as IWM-proxy (+0.45%, vs. Investrade's own +0.38%) and QQQ-proxy (+1.11%) respectively.

Annex B — Data points sought but not verified this edition

- A reported Anthropic IPO filing (26 Oct 2026) as the tech-rally catalyst — no corresponding SEC filing found; only a confidential-draft/pending-public-filing status as of September 2026.
- A reported approx. $95bn Meta equity capital raise — no primary filing or dated confirmation found.
- CART's and DASH's reported merger-talk catalyst — single-sourced (Investrade), not confirmed by either company.
- JBLU's reported restructuring-adviser/creditor-talks catalyst — single-sourced, not independently confirmed.
- TSLA's reported Barclays upgrade to Overweight — single-sourced, not cross-confirmed.
- DG's reported FTC/20-state overcharging lawsuit — single-sourced, not verified against an FTC release.
- Eight single-sourced analyst-action pairings (UBS/ROST, TD Cowen/BAH, B. Riley/BTU, Raymond James/CNOB, Wells Fargo/FICO, Morgan Stanley/XYZ, JPMorgan/FCNCA, RBC/EFX) — not cross-confirmed.
- AT&T's exact Wednesday 21 Oct close (-6.45% vs. a third-party's -6.1%) — unresolved for a fourth edition.
- Equifax's Thursday 22 Oct +6.59% rally leg — remains uncatalyzed after a further search pass.
- Whether Meta has filed a formal notice of appeal of the $25bn New Mexico judgment — unconfirmed for a fourth straight edition.
- Official CME FedWatch probabilities — blocked/timed out, a 10th straight failure.
- Kalshi direct fetch of Fed-odds pricing — rate-limited (HTTP 429), a 14th straight failure.
- ECB's exact Governing Council meeting start date (28 Oct) — only the 29 Oct press-conference date is primary-confirmed.
- Banxico's next policy decision date — not found this edition.
- Copper's COMEX secondary cross-check — no reliable dated settlement figure found (only stale/undated snapshots).
- Trading Economics' dated Treasury-yield history for 23/26 Oct — page surfaced only a current snapshot, not extractable dated rows this edition.
- Consensus estimates for Thursday's Q3 GDP advance estimate, September PCE, and China's October PMI — not gathered this edition.
