Daily Economic Briefing

Wednesday 11 November 2026 | Window: Mon 9 Nov 2026 20:00 ET – Tue 10 Nov 2026 20:22 ET (Tue 10 Nov close/AH, the window's one NYSE session) | Research cutoff 20:22 ET 10 Nov 2026 | Edition 61

60-second read

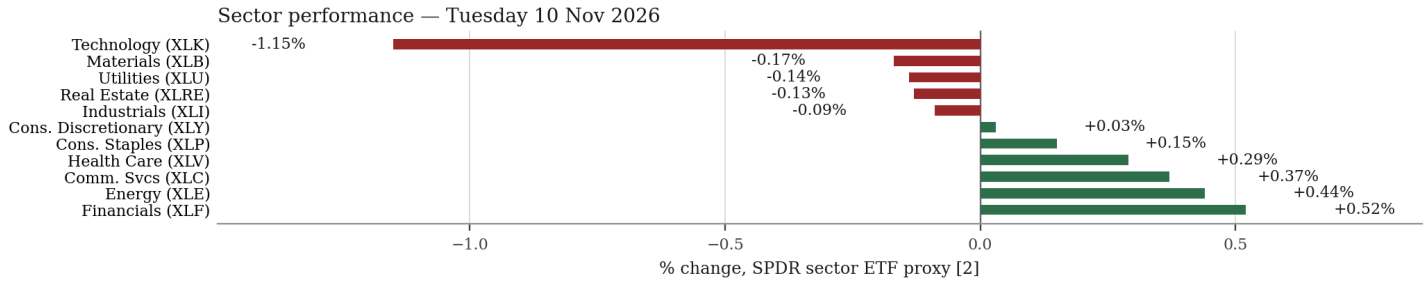

1. **October CPI ran hot enough to firm December hike odds to approx. 85-86%** (from approx. 77-82% last edition), a fourth straight hawkish extension[10][16][17] — even though BLS could not publish a year-over-year reading at all this month, a data-collection gap tied to last year's shutdown[10]. Equities pulled back modestly (S&P -0.4%), while yields and the dollar rose and gold and oil fell.
2. **Nvidia's governance crisis is now confirmed**, reversing last edition's caution: the board has hired former federal prosecutor Joon Kim and law firm Wachtell, Lipton to investigate CEO Jensen Huang's relationship with an alleged Chinese-intelligence target, following Huang's own letter to staff acknowledging it[6][7][8]. NVDA fell a further 5.47% to $168.89; no SEC filing has been made on the matter as of this cutoff[9].
3. **Hims & Hers fell 16.61% despite a revenue beat**, as gross margin collapsed to 57% from 74% a year ago and guidance was cut[4] — while Rocket Lab rose 6.54% on a record backlog and its first positive operating cash flow quarter[5], the latest case of beat-and-raise guaranteeing nothing.
4. The chip complex paused after Monday's rally (Broadcom +3.91%, AMD +1.30%, Intel -2.09%, Micron -1.10%)[3] as Nvidia's slide offset the rest of the group; VIX eased to 19.46 in clean ascending contango even as equities fell, consistent with a manageable, not shock, read on the CPI print[24].
5. A long-running tariff ambiguity resolved: USTR extended all 178 Section 301 China-product exclusions through 11:59pm ET 9 January 2027, via a Federal Register notice published the same day as this window's cutoff[12].

1. Market recap

S&P 500	Dow	Nasdaq Comp.	Russell 2000	VIX	10Y Treasury
7,520.93	**52,231.89**	**25,065.87**	**2,821.38**	**19.46**	**4.98%**
-0.4%	-0.3%	-0.7%	-0.7%	-2.3%	+10bp

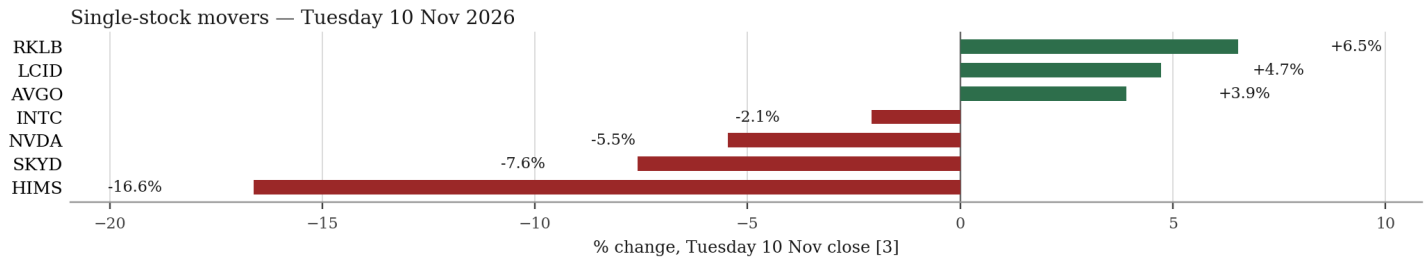

US equities pulled back modestly Tuesday, a mirror-image session to Monday's broad relief rally: the S&P 500 fell 0.4% to 7,520.93, the Dow fell 0.3% to 52,231.89, the Nasdaq Composite fell 0.7% to 25,065.87 and the Russell 2000 fell 0.7% to 2,821.38, confirmed via a WTOP.com AP-wire mirror matching word-for-word a lanacion.com.ar mirror, and cross-checked against Yahoo Finance's ^GSPC history table (exact match)[1]. The AP wire attributed the pullback to October's hotter-than-expected CPI print lifting Fed rate-hike expectations, even as oil kept easing[1]; a wire-cited detail that a Fed official floated a larger hike next meeting could not be independently corroborated and is not repeated here. The October CPI print itself (headline +0.4% m/m seasonally adjusted, core +0.3% m/m) is detailed in Section 3[10], and the broader rates/FX/commodity reaction (yields up 9-17bp across the curve, DXY up, gold and oil both lower) is detailed in Section 4.

Sector performance

Breadth was close to even — 6 of 11 SPDR sector ETFs closed higher Tuesday, a materially calmer session than Monday's 11-of-11 sweep[2]. Financials (+0.52%) led, followed by Energy (+0.44%, even as crude itself fell — see Section 4) and Communication Services (+0.37%). Technology (-1.15%) was the clear laggard, consistent with the Nasdaq's underperformance versus the S&P, driven largely by Nvidia's slide (Section 2); Materials, Utilities, Real Estate and Industrials were all modestly lower. No secondary cross-check (MarketWatch/WSJ) could be fetched for a second straight edition; this table is single-sourced to stockanalysis.com[2].

2. Equities and earnings

Ticker	Move	Driver
HIMS	-16.61%	Q3 revenue $890.4M (+49% y/y) but gross margin fell to 57% from 74% y/y; FY26 Adj. EBITDA guide cut to $257-277M. Reported Mon 9 Nov AMC; Tue is the reaction session[4]
SKYD	-7.59%	Reported Q3 2026 results Mon 9 Nov AMC; specific figures/guidance could not be verified — search results repeatedly conflated this ticker with the separate, similarly-named Paramount Skydance (PSKY). Driver unconfirmed[3], see Annex B

NVDA	-5.47%	Third straight session lower on the board-investigation overhang — see dedicated item below[3][6]
INTC	-2.09%	No company-specific Tuesday-dated driver found; likely spillover pause in chips after Monday's rally[3]
AVGO	+3.91%	No company-specific Tuesday-dated driver found[3]
LCID	+4.72%	Reversed an aggregator-claimed premarket decline tied to an EPS/revenue miss; actual regular-session close rose. A premarket-vs-close mismatch, not independently re-verified given the reversal made the claimed driver moot for direction[3]
RKLB	+6.54%	Record Q3 revenue $267.8M (+73% y/y), record backlog approx. $3.6bn (+52% q/q), first positive GAAP operating cash flow ($7.2M); GAAP EPS -$0.12. Reported Mon 9 Nov AMC[5]

Both HIMS and RKLB reported Monday evening and are confirmed against their primary SEC 8-K filings rather than aggregator summaries[4][5]. A premarket aggregator snapshot had separately claimed RKLB was down approx. 7% premarket on an "EPS miss" framing; the actual regular-session close reversed sharply higher, a textbook premarket-snapshot-reported-as-close error excluded from the table above. No analyst action tied to a named analyst, named firm and the correct date could be independently verified this session — a fourth consecutive edition with none found.

Nvidia: the board-investigation story, now confirmed

Last edition treated a circulating claim — that Nvidia's board had formally announced an investigation into CEO Jensen Huang on 8 November, including a staff apology email — as uncorroborated and excluded it. This edition's own direct, independent re-check (not delegated, given the claim's history) found it is in fact real: NVIDIA's own newsroom carries a dated 8 November 2026 "Statement From NVIDIA Board of Directors," confirming the board is "initiating an independent investigation" after reporting that Huang was "the target of a foreign intelligence effort," to be overseen by "a committee of independent directors, assisted by outside independent counsel"; the board states it has "no reason to believe that either national security or NVIDIA secrets were compromised" and retains confidence in Huang[6]. A companion 10 November statement from the board's independent members names the outside counsel for the first time: former acting US Attorney (SDNY) Joon H. Kim and his firm, Wachtell, Lipton, Rosen & Katz[7]. Both statements are independently corroborated by multiple top-tier wires and outlets — the Washington Post, NBC News, CBS News, Axios, TechCrunch and Fox Business all carried the story with matching detail, including Huang's own internal message acknowledging the relationship (with Megaspeed executive Alice Huang, the subject of the 29 October NYT/FT reporting on alleged China-intelligence ties) and apologizing to colleagues[8]. A reported shareholder lawsuit and an FBI-investigation characterization appear in some secondary coverage but could not be independently corroborated and are not repeated as fact. Notably, as of this cutoff NVIDIA has filed no Form 8-K referencing the matter — confirmed directly via SEC EDGAR's filing list and full-text search, a genuine disclosure gap worth watching[9]. Huang remains CEO through the review. Against this overhang, NVDA fell a third straight session (-5.47% to $168.89) even as peers paused rather than extended Monday's rally (Broadcom +3.91%, AMD +1.30%, Intel -2.09%, Micron -1.10%, roughly flat)[3]. A congressional closed-door briefing request (reportedly 18 November) is secondary-sourced only and not repeated as confirmed.

3. Macro, policy and rates

Central bank	Policy rate	Last change	Next decision
Federal Reserve	3.75%-4.00%	Held, 28 Oct 2026 (10-2, hawkish dissent)	8-9 Dec 2026
Bank of Japan	approx. 1.25%	Held, 29-30 Oct 2026 (8-1)	17-18 Dec 2026
Bank of England	4.00%	Hiked 25bp, 5 Nov 2026 (8-1)	17 Dec 2026
European Central Bank	2.50% (depo)	Held, 28-29 Oct 2026	16-17 Dec 2026
Bank of Canada	2.50%	Hiked 25bp, 28 Oct 2026	9 Dec 2026
Reserve Bank of Australia	4.85%	Hiked 25bp, 3 Nov 2026 (6-3)	7-8 Dec 2026
Swiss National Bank	0.00%	Held, 25 Sept 2026	10 Dec 2026
Norges Bank	4.50%	Hiked 24 Sept 2026; interim hold 5 Nov 2026	17 Dec 2026
Riksbank	2.00%	Hiked 25bp, 4 Nov 2026 (vote split unconfirmed)	approx. 16 Dec 2026
Banxico	6.25% (secondary-sourced)	Cut 25bp, 5 Nov 2026 (reported 3-2)	17 Dec 2026

October 2026 CPI (BLS, released 8:30am ET Tue 10 Nov): headline +0.4% m/m seasonally adjusted (+0.2% unadjusted), core (ex food/energy) +0.3% m/m seasonally adjusted, the same pace as the prior two months. Unusually, **BLS published no year-over-year figures at all** for either series: it did not collect October 2025 survey data because of that year's lapse in appropriations, so no valid 12-month comparison exists[10]. No single, clearly-attributed consensus forecast could be found; contradictory unattributed-aggregator ranges were discarded rather than reported, see Annex B. **December FOMC hike odds** firmed further: Polymarket's Gamma API put a 25bp-hike market at approx. 85.5% and a 50bp+ market at approx. 11%[16]; DeFi Rate's blended Kalshi/Polymarket snapshot (10 Nov, 8:08pm ET) read approx. 86% hike / 4% hold[17] — both up from approx. 77-82% last edition, a fourth consecutive hawkish extension. Kalshi's own direct fetch failed again (HTTP 429) and CME FedWatch timed out again; both are now unusable across more than twenty consecutive editions, see Annex A. **Riksbank's 4 November vote split** remains unconfirmed: the bank's own calendar had scheduled minutes for 09:30 CET 10 Nov, but a direct minutes-PDF fetch 404'd at this cutoff[11]. **The Section 301 178-product China tariff-exclusion ambiguity is resolved**: a new USTR notice (Federal Register Doc. 2026-22925, published 10 Nov 2026, 91 FR 72610) extends all 178 exclusions through 11:59pm ET 9 January 2027, superseding the prior notice's internally inconsistent 9-vs-10 November lapse dates[12]. Separately, and not to be conflated with the above: a reportedly separate "reciprocal tariff" truce with China (holding a 10% rate) was itself due to expire around this same boundary; secondary reporting (Bloomberg Government, investinglive, other outlets) describes Treasury Secretary Bessent announcing on 23 September 2026 a two-month extension to 10 January 2027, but no primary USTR/White House/Federal Register document codifying that specific extension could be found — treat as secondary-sourced only[13]. **Government funding** is reconfirmed directly: H.R. 6500 funds federal agencies through 11 December 2026, no shutdown in effect[18]. **Midterm-election national certification status** remains unconfirmed for a fourth straight edition; only state/county certification deadlines were found (examples: California by 11 Dec, Pennsylvania county certification by 23 Nov, Arizona statewide canvass by 23 Nov, Michigan state canvass by 23 Nov)[14]. **Banxico's primary site** returned a new failure mode this round — reachable, but the relevant release is an unparseable PDF; the 5 Nov cut to 6.25% (3-2 vote, Heath and Borja Gómez dissenting) remains secondary-sourced only via consistent Mexican financial press[15]. **Day ahead:** Wednesday 11 Nov is Veterans Day — equities trade a full normal session while Treasury cash markets, SOFR/EFFR/OBFR fixings and the Fed are closed, independently re-confirmed; October PPI is due Friday 13 Nov. NFIB's October small-business optimism reading (normally due the second Tuesday) could not be retrieved (403); Thursday 12 November's own data calendar carried conflicting placements for jobless claims/retail sales/Philly Fed across sources and is left unresolved rather than guessed, see Annex B.

4. Commodities and FX

Instrument	Level	Chg	Note
WTI crude	$86.21	-0.74%	Investing.com; Yahoo Finance shows $86.64 (-0.24% vs. its own Mon base), a disclosed cross-vendor disagreement[20][21]
Brent crude	$92.02	-0.59%	Investing.com, single-sourced[20]
Henry Hub (NGZ6, Dec)	$3.293/MMBtu	+2.33%	Investing.com; Yahoo (NG=F) shows $3.302 (+2.61%), a disclosed cross-vendor disagreement[20][21]
Gold futures	$4,046.20	-1.66%	Investing.com[20]; Kitco historical close inaccessible a third straight edition, live quote only approx. $4,032-4,034[23]
Silver futures	$51.563	-2.14%	Investing.com[20]
COMEX copper	$6.2733/lb	-1.12%	Investing.com[20]
LME copper, cash	$13,992.00/t	-0.27%	Westmetall.com[22]
LME copper, 3-month	$13,830.00/t	n/a	Monday base unobtainable (persistent query-parameter bug); $162/t cash-over-3-month backwardation on the level alone[22]
DXY (Yahoo DX-Y.NYB)	102.28	+0.62%	Minor cross-vendor gap vs. Investing.com proxy (102.21, +0.55%)[21][20]
EUR/USD	1.1164	-0.53%	Investing.com[20]
GBP/USD	1.3344	-0.73%	Investing.com[20]
USD/JPY	158.76	+0.54%	Investing.com[20]
2-yr Treasury	4.73%	+17bp	home.treasury.gov official par-yield TextView[19]
10-yr Treasury	4.98%	+10bp	home.treasury.gov[19]
30-yr Treasury	5.35%	+9bp	home.treasury.gov[19]

A broadly consistent hawkish-repricing session: yields rose 9-17bp across the curve, led by the front end, and the dollar firmed against all three major crosses, while gold, silver and both crude grades fell — all directionally consistent with the hot CPI print, though no single source explicitly ties each instrument's move to that release. Every % change above was computed directly from each vendor's own two closing prices rather than its displayed change field; this edition found no repeat of last edition's systemic 20-80bp Investing.com display-vs-computation divergence — the vendor's own displayed figures matched independent computation on every instrument checked this time, a one-edition issue rather than a standing one, still worth rechecking next edition. The prior edition's logged Monday 9 Nov WTI base (approx. $86.44) does not match this edition's fresh two-vendor re-fetch (both Investing.com and Yahoo independently show $86.85) — consistent with this report's known vendor-retroactive-revision pattern for oil; flagged rather than silently carried forward, see Annex A.

5. Derivatives, volatility and positioning

The VIX complex eased modestly in clean ascending contango: VIX -2.31% to 19.46, VIX9D -6.74% to 18.54, VIX3M -1.01% to 20.64, VIX6M -1.04% to 21.99, VVIX -1.83% to 96.63, SKEW +0.52% to 151.12 (last_trade_time 16:15:01 ET for the first five, 17:00:19 ET for SKEW)[24]. Both of the feed's known bugs (a duplicated prior-close field, a mis-divided percent-change field) were absent and independently re-verified by manual calculation this edition. SKEW's modest uptick even as VIX fell is a mild tail-hedging signal worth a one-line note, not a term-structure story. Dealer-gamma sources remain fully unusable: zerogex.io a 22nd consecutive failure (placeholder dashes, no timestamp), SpotGamma a 16th (marketing page loads, no live figures, dashboard behind a login wall). No fresh CFTC Commitments of Traders report fell inside this window, as expected — confirmed directly against cftc.gov, with the next report still due Monday 16 November (covering Tuesday 10 Nov data)[26]. Funding: SOFR/EFFR/OBFR all printed 3.88% and IORB/ON RRP/primary-credit/standing-repo held at 3.90%/3.75%/4.00%/4.00% for Monday 9 Nov, the most recent published reading; Tuesday 10 Nov's reading had not yet posted at this cutoff, consistent with the Veterans Day-adjacent publication lag[25]. CoreWeave reported Q3 2026 results after Tuesday's close; neither the figures nor the after-hours reaction could be independently verified by this cutoff, see Annex B.

6. The day ahead

Date	Event	Consensus / context
Wed 11 Nov	Veterans Day	Equities trade a full normal session; Treasury cash markets, SOFR/EFFR/OBFR fixings and the Fed are closed
Wed 11 Nov	CoreWeave (CRWV) Q3 reaction	Reported Tue 10 Nov AMC; results/reaction unverified at this cutoff, watch next edition
Fri 13 Nov	October PPI	No consensus independently confirmed yet
Mon 16 Nov	CFTC CoT report (covering Tue 10 Nov data) + Q3 2026 13F filing deadline	Both corrected dates confirmed last edition; same-day coincidence
8-9 Dec	FOMC decision (SEP meeting)	Hike odds approx. 85-86% as of this cutoff

Sector setup we take into Wednesday's session

- Technology enters Wednesday as the session's weakest link, with Nvidia's governance overhang now confirmed rather than speculative — watch for any further primary-source development (an 8-K, a new board statement, a congressional response) rather than a repeat of secondary-only claims.
- Financials and Energy led Tuesday despite crude's own decline; a rate-sensitive, yield-up setup favors Financials again if the curve keeps steepening on the CPI read.
- Chip peers (AVGO, AMD) paused rather than reversed Monday's rally; Oracle and other AI-infra-adjacent names remain worth watching for any read-across from Nvidia's news.

Annex A — Assumptions, corrections and status

- No correction box this edition — nothing published in a prior edition was found to be wrong. Last edition's exclusion of the Nvidia board-investigation claim was a correctly cautious non-claim at the time, not an error; this edition independently confirmed the story true, see Section 2.
- WTI's Monday 9 Nov base revised: last edition logged approx. $86.44; this edition's fresh two-vendor re-fetch (Investing.com and Yahoo, independently) both show $86.85. Consistent with this report's known vendor-retroactive-revision pattern for oil; not treated as a reader-facing correction per that established convention.
- Investing.com's displayed % change field matched direct settle-to-settle computation on every tracked commodity/FX instrument this edition — last edition's systemic 20-80bp divergence did not recur. Treat as a one-edition issue so far; keep checking.
- CBOE VIX-feed's two known bugs (duplicated prior-close, mis-divided percent-change) were both absent and independently re-verified by manual calculation.
- Sector-performance table remains single-sourced to stockanalysis.com for a second straight edition; no MarketWatch/WSJ cross-check could be fetched.
- SKYD's -7.59% move is confirmed by price history but its specific earnings driver could not be verified; search results repeatedly conflated this ticker with the separate, similarly-named Paramount Skydance (PSKY).
- No SEC Form 8-K has been filed by NVIDIA referencing the board investigation as of this cutoff, confirmed directly via EDGAR's filing list and full-text search — a genuine disclosure gap, not an oversight of this report's.
- A reported NVDA shareholder lawsuit and a characterization of an FBI investigation both appear in secondary coverage only; neither could be independently corroborated and neither is reported as fact.
- A congressional closed-door briefing request (reportedly 18 November, Rayburn House Office Building) is secondary-sourced only (one aggregator); not independently confirmed.
- Riksbank's 4 Nov vote-split minutes remain unresolved; a direct minutes-PDF fetch 404'd this edition despite the bank's own calendar listing a 10 Nov 09:30 CET publication time.
- Banxico's primary site is now reachable but returns an unparseable PDF for the relevant release — a new failure mode distinct from prior editions' redirect/404/403 chain; the rate remains secondary-sourced.
- The reciprocal-tariff-truce extension to 10 January 2027 (attributed to Treasury Secretary Bessent, 23 Sept 2026) remains secondary-sourced only; no primary USTR/White House/Federal Register document was found codifying it. Do not conflate with the separately primary-confirmed Section 301 178-product exclusion extension.
- Kalshi's direct fetch failed again (HTTP 429, reverting from last edition's HTTP 401) and CME FedWatch timed out again; both now unusable across more than twenty consecutive editions.
- Dealer-gamma sources (zerogex.io, SpotGamma) remain fully unusable, 22 and 16 consecutive failed editions respectively.
- LME 3-month copper's Monday 9 Nov base remains unobtainable; westmetall.com's table view still returns only the most-recent date regardless of date-range parameters tried.
- Kitco's historical-close pages remain totally inaccessible for a third straight edition; only a live quote was retrievable.

Annex B — Data points sought but not verified this edition

- A single, clearly-attributed consensus forecast for October CPI (only contradictory unattributed-aggregator ranges were found and discarded).
- Riksbank's 4 November vote split/dissent detail.
- A primary-source document for the reported reciprocal-tariff-truce extension to 10 January 2027.
- National certification status of the 3 November 2026 midterm elections.
- Banxico's policy rate and vote detail from its own primary site (PDF unparseable).
- CME FedWatch's December 2026 hike probability (timed out).
- Kalshi's direct December 2026 FOMC market read (HTTP 429).
- Dealer gamma / net GEX from zerogex.io or SpotGamma.
- CoreWeave's actual Q3 2026 results and after-hours reaction (reported after this window's cutoff).
- LME 3-month copper's Monday 9 Nov base level.
- Kitco's official historical gold/silver close for Tuesday 10 Nov.
- NFIB's October 2026 Small Business Optimism Index reading (403 on direct fetch).
- A secondary (MarketWatch/WSJ) cross-check for Tuesday's sector-performance table.
- Thursday 12 November's economic-release calendar (jobless claims/retail sales/Philly Fed timing conflicted across sources).
- SKYD's specific Q3 2026 earnings driver (confounded with Paramount Skydance, PSKY, across every source tried).
- Any single-stock options-flow or gamma commentary tied specifically to Tuesday's largest equity movers.
- The reported NVDA shareholder lawsuit and FBI-investigation characterization.
- The specific 18 November congressional closed-door briefing request detail.
- A named analyst/firm/date-confirmed analyst action for Tuesday's session (none found for a fourth straight edition).

Method: every figure traces to a named source in Annex C; where sources disagreed, the better-corroborated figure was used and the conflict disclosed. Nothing estimated or filled from memory — unverifiable items are listed in Annex B. Not investment advice.
