Daily Economic Briefing

Friday 30 October 2026 | Window: Wed 28 Oct 2026 20:00 ET – Thu 29 Oct 2026 20:21 ET (Thu 29 Oct close/AH, the window's one NYSE session) | Research cutoff Thu 29 Oct 2026, approx. 8:21pm ET | Edition 53

60-second read

1. **Growth and inflation both ran hot Thursday, and the market shrugged in two different directions at once.** Q3 GDP (advance) printed **+3.4%** annualized and September core PCE came in at **+3.1% y/y**, both firming the "resilient growth, sticky inflation" case behind Wednesday's hawkish FOMC dissent — yet December hike odds on DeFi Rate's blended aggregator actually *eased* to approx. 71% from approx. 80%, and the Treasury curve rallied 5-7bp across the board.[23][24][25][42]
2. **Alphabet lost approx. $500bn of market value in a single regular session (-12.64%),** extending Wednesday's after-hours reaction to an $8.7bn non-operating mark-to-market loss even as Search (+12%) and Google Cloud (+103%) both beat — one of the largest single-day dollar losses for a megacap on record, dragging Communication Services to the day's sector laggard.[18]
3. **Amazon missed on EPS despite AWS's fastest growth in nearly five years.** Q3 EPS of $1.89 fell short of approx. $1.96 consensus (the year-ago quarter had a one-time $9.5bn Anthropic gain in it); AWS revenue grew **+39%** to $46.0bn and operating margin hit a record 13.9%. Shares were already down 4.25% into the print and fell a further 7.30% after hours.[5][6]
4. **"Beat-and-raise does not guarantee a positive reaction" produced its largest case yet.** ServiceNow beat on every headline metric and posted a GAAP profit, then fell **-26.95%** with no confirmed driver beyond guidance landing short of elevated buy-side expectations; Intel beat on revenue and EPS but guided Q4 revenue to $15-16bn, well under the Street's approx. $17bn, and fell 23.04% after hours; Caterpillar beat cleanly and still fell 9.25% on AI-capex-durability concerns.[11][12][9]
5. **Breadth and the index tape told opposite stories:** 9 of 11 sectors closed higher (Health Care +2.40% led on Eli Lilly and Merck beats) even as the S&P 500 (-0.31%), Dow (-0.25%) and Nasdaq Composite (-1.38%) all fell — the entire index-level damage was concentrated in a handful of megacaps. The ECB held its three key rates unchanged as expected; the BoJ's Oct 29-30 decision lands just after this window's cutoff, carried to edition 54.[4][22][29]

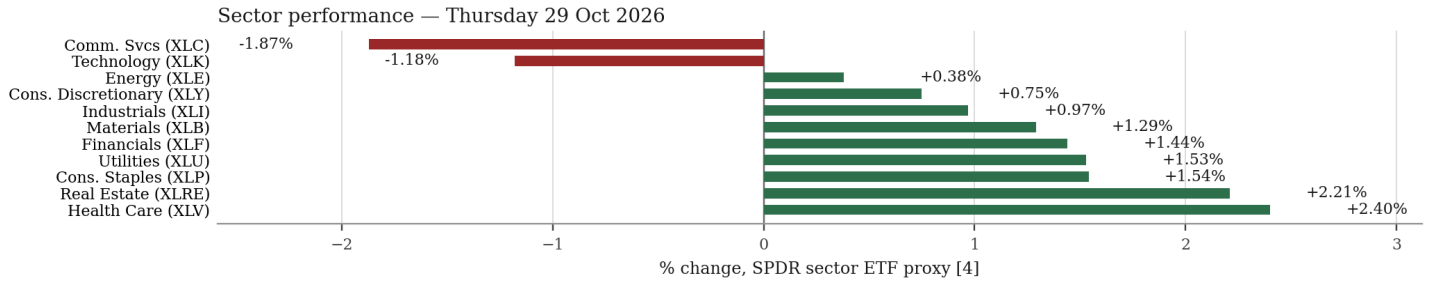

1. Market recap

S&P 500	Dow Jones	Nasdaq Comp.	Russell 2000	10-yr Treasury	VIX
7,720.39	**52,342.56**	**26,184.73**	**approx. 2,859**	**4.98%**	**17.20**
-0.31%	-0.25%	-1.38%	+1.01%	-7bp	+1.72%

WTI crude	Gold
$102.87	**$4,019.65**
+0.09%	-0.79%

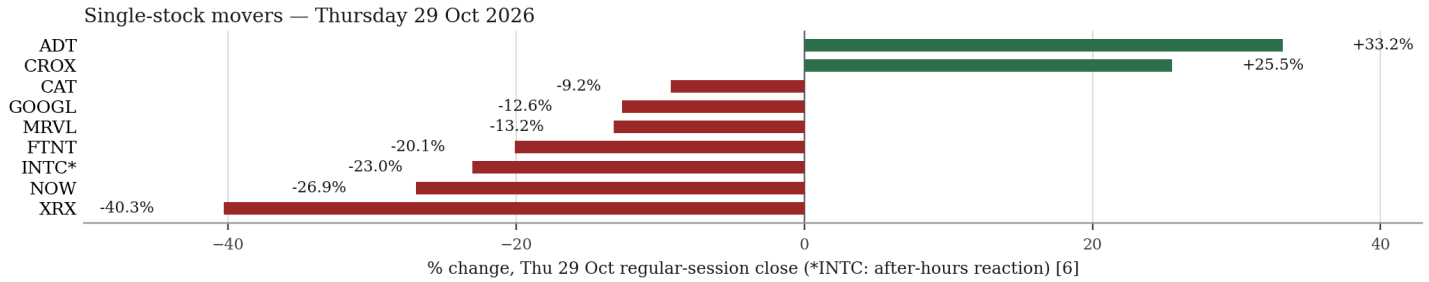

Index-level and breadth diverged sharply Thursday. The S&P 500 fell 0.31% to 7,720.39, the Dow 0.25% to 52,342.56 and the Nasdaq Composite 1.38% to 26,184.73, while the Russell 2000 rose approx. 1.01% — yet 9 of 11 sectors closed higher, the broadest breadth reading in several editions.[1][2][3] AP's and Reuters' wires were not indexed/fetchable for Thursday's session by cutoff (a now-familiar gap); the closes above come from Yahoo Finance's live markets blog cross-checked against Investrade's market review and SPY/DIA/QQQ/IWM ETF-proxy data (note QQQ tracks the Nasdaq-100, not the Composite). One secondary push-alert source claimed a steeper -0.5%/-1.57% S&P/Nasdaq move; the more detailed, point-level Yahoo/Investrade figures are used here and the discrepancy is disclosed rather than silently resolved (Annex A).[1][2] The divergence traces almost entirely to a handful of megacap earnings reactions (Alphabet, ServiceNow, Intel, Fortinet, Marvell) rather than a broad selloff — see Section 2. Strong Q3 GDP (+3.4% annualized) and a hot September PCE print (core +3.1% y/y) reinforced Wednesday's hawkish FOMC-dissent narrative, yet Treasury yields fell 5-7bp across the curve and December hike odds eased rather than firmed — a tension disclosed in Section 3 rather than resolved. The ECB held its three key rates unchanged as expected at its 28-29 October meeting; the BoJ's own Oct 29-30 decision had not posted as of this window's cutoff.[22][29]

Sector performance

All 11 SPDR sector ETFs were fetched directly from stockanalysis.com's price-history tables for Thursday's close. Health Care (+2.40%) led, boosted by Eli Lilly's +6.63% GLP-1-driven beat and Merck's +3.83% beat; Real Estate (+2.21%) and Utilities (+1.53%) rallied as Treasury yields fell across the curve. Technology (-1.18%) and Communication Services (-1.87%) brought up the rear — both weighed down almost entirely by single names (Alphabet in Communication Services; Intel, Fortinet, Marvell and ServiceNow in or adjacent to Technology) rather than a sector-wide rotation, which is the mechanism behind Thursday's breadth/index-level split. A separate secondary recap (Investrade) put breadth at 8 of 11 rather than the 9 of 11 from this report's direct 11-ETF tally; the direct fetch is used per this report's standing method (Annex A).[4][2]

2. Equities and earnings

Ticker	Move	Driver
XRX	-40.32%	Q3 GAAP net loss of $1,015m ($7.73/sh), revenue -4.7%; suspended common and preferred dividends and cut FY guidance citing "intensifying headwinds"[15]
NOW	-26.95%	Beat on every headline metric (subscription revenue +21%, GAAP net income $277m/$0.27 EPS, a profit) and guided Q4 above Street — fell anyway; no confirmed driver beyond guidance landing short of elevated buy-side expectations[11]
INTC*	-23.04% (AH)	Beat on revenue (+21%) and non-GAAP EPS (+126% YoY, DCAI +78%), but guided Q4 revenue to $15.0-16.0bn vs. approx. $17bn expected, citing a PC slowdown into at least H1 2027; Foundry posted a $1.9bn operating loss despite +58% revenue[12][13][14]
AMZN	-4.25% regular; -7.30% AH	EPS $1.89 missed approx. $1.96 consensus (prior-year quarter included a one-time $9.5bn Anthropic gain) despite AWS +39% and a record 13.9% operating margin; Q4 guide in line
FTNT	-20.09%	Second straight session of declines; service-revenue guidance cut to $5.15-5.17bn even as total-revenue guidance was raised (driver secondary-sourced, not independently pulled from the 8-K this edition)[21]
MRVL	-13.24%	Driver unconfirmed — a reported Lumentum-acquisition-talks story is contradicted by Lumentum's own nearly flat (+0.61%) close; price move verified, catalyst not[19]
GOOGL	-12.64%	Extension of Wednesday's after-hours reaction to an $8.7bn non-operating mark-to-market loss on equity stakes (SpaceX, Anthropic); Search +12%, Google Cloud more than doubled, both beats
CAT	-9.25%	Clean beat (adjusted EPS $7.20 vs. $4.95 a year ago) but fell on investor caution over AI/data-center capex demand durability and only modest Q4 sales-growth guidance[20]
SFM	-22.58%	Weak Q4 EPS guidance tied to a flagged price-cutting strategy (secondary-sourced only, not independently pulled from a primary filing this edition) [20][21]
CVNA	+15.68%	Delayed market reaction to Wednesday's clean beat (record Q3 revenue $8.04bn) largely registering in Thursday's cash session rather than Wednesday's[20]
CROX	+25.54%	HEYDUDE returned to growth (+6% YoY) for the first time in six quarters; Crocs Brand posted a record Q3; raised FY2026 enterprise revenue-growth outlook[20]
GKOS	+33.65%	Record Q3 sales +58% YoY vs. approx. +37% consensus; raised FY2026 guidance and introduced preliminary 2027 guidance of approx. $1bn[16]
ADT	+33.20%	Agreed to an all-cash acquisition by Thrive Holdings at $10.00/share, a 45.6% premium to the unaffected close; board unanimously approved, go-shop through 28 Nov 2026[17]

Amazon's quarter was the session's dominant earnings story. Q3 2026 net sales rose 12% to $201.9bn; AWS grew 39% to $46.0bn, its fastest pace in nearly five years, with AWS operating income nearly doubling to $17.8bn. Overall operating income hit a record $28.1bn (13.9% margin). Net income fell to $20.7bn from $21.2bn a year earlier — entirely a comp effect, since the year-ago quarter included a one-time $9.5bn pre-tax gain on Amazon's Anthropic stake. Diluted EPS of $1.89 missed the approx. $1.96-1.97 Street consensus, a result reported by several outlets as a "double miss" despite the AWS acceleration. Q4 guidance: net sales $240.0-247.0bn, operating income $28.5-33.5bn; 2026 capital expenditure guided to approx. $220bn.[5][6]

Clean beats that worked, for once: Mastercard's net revenue rose 14% with adjusted EPS of $5.31 against approx. $5.14-5.15 consensus, and shares rose 4.16%; Eli Lilly's revenue grew 39% on Mounjaro/Zepbound strength, non-GAAP EPS rose 7% to $7.48, and the company raised FY2026 revenue guidance to $91.0-92.0bn, with shares +6.63%; Merck's sales rose 5% with WINREVAIR revenue +93%, FY guidance raised, shares +3.83%.[7][8][10]

Open-thread follow-ups: Equifax had no Thursday-specific news or confirmed catalyst for its multi-session pullback (declining-urgency thread, unchanged). AT&T's disputed Wednesday 21 October close is now resolved: multiple independent sources confirm -6.45% as the correct figure, closing a standing open item. Meta's formal notice of appeal of the $25bn New Mexico judgment remains unconfirmed for a seventh straight edition. Chevron, Exxon Mobil, AbbVie and Newell Brands had not filed Q3 8-Ks as of this window's cutoff; third-party calendars now consistently place all four on Friday 30 October, before the open — carried to edition 54.[32] Separately, Apple's fiscal Q4 2026 report has shifted to Monday 2 November 2026 (first call under CEO John Ternus), a one-session-later slot than FY2025's; this did not land inside this window and is noted on the day-ahead calendar below.[32] No dated, named-firm analyst action with an attached dollar price target was found for Thursday.[32]

3. Macro, policy and rates

Central bank	Policy rate	Last change	Next decision
Federal Reserve	3.75%-4.00%	Held 28 Oct 2026 (10-2, hawkish dissent)[48]	8-9 Dec 2026
European Central Bank	Deposit 2.50% / refi 2.65% / lending 2.90%	Held 16 Sep 2026; reconfirmed unchanged 29 Oct 2026	Not reconfirmed this edition
Bank of England	3.75%	Held 17 Sep 2026 (6-3)	5 Nov 2026
Bank of Japan	approx. 1.25%	Hiked 18 Sep 2026	Decision pending from the Oct 29-30 meeting — not posted as of this window's cutoff

Norges Bank	4.50%	Hiked 24 Sep 2026	17 Dec 2026
Riksbank	1.75%	Held 30 Sep 2026	4 Nov 2026 (decision), meeting 3 Nov
Swiss National Bank	0%	Held 24 Sep 2026	10 Dec 2026
Reserve Bank of Australia	4.60%	Hiked 29 Sep 2026	2-3 Nov 2026 (secondary-sourced; rba.gov.au not reachable this edition)[31]
Bank of Canada	2.50%	Hiked 28 Oct 2026 (surprise)	9 Dec 2026
Banxico	6.50%	Held 24 Sep 2026	Unavailable

Thursday carried the week's heaviest macro load. The BEA's advance Q3 2026 GDP estimate showed real growth of **+3.4%** annualized (vs. +2.2% in Q2), led by consumption, private inventory investment and equipment spending.[23] In the same 8:30am ET slot, September's PCE price index rose 0.5% m/m / **3.6% y/y** headline, core 0.3% m/m / **3.1% y/y** — both above the Fed's 2% target and a further acceleration from August's 3.4%/3.0%, consistent with the hot September CPI/PPI prints already logged.[24] That combination, with Wednesday's hawkish dissent, would ordinarily argue for firmer hike odds; instead DeFi Rate's blended aggregator showed December 8-9 hike odds at approx. **71%** (hold approx. 26%, cut approx. 2%), down from approx. 80% at edition 52 — disclosed, not resolved. Its own internal inconsistency persisted a seventh straight edition (a "decision" contract at 70.5% vs. a "rate-level" contract at 75.5%).[25] Kalshi failed a 17th straight edition (HTTP 429), CME FedWatch a 13th (timeout), Polymarket again showed only an expired Dec 2025 contract.[26][27][28]

The ECB's Governing Council held all three key rates unchanged as expected at its 28-29 October meeting, confirmed directly; Lagarde's remarks and any vote-split could not be retrieved by cutoff.[22] The BoJ's two-day meeting (29-30 Oct) had not produced a posted decision as of this window's cutoff; given typical BoJ timing, the announcement likely falls Thursday 10:30pm-midnight ET or later — carried to edition 54 as a live fact, not assumed unchanged.[29] Riksbank confirms it held at 1.75% effective 30 September, next meeting 3 Nov, decision 4 Nov — resolving the next-decision question, though the exact origin date of 1.75% remains imprecise.[30] No new development on the US-China tariff thread; remains closed. US funding status (H.R. 6500, through 11 Dec 2026) was not independently reconfirmed this edition — not contradicted, carried forward.[32]

4. Commodities and FX

Instrument	Level	Chg	Note
WTI crude	$102.87	+0.09%	Single-sourced to Investing.com this edition; EIA/wire cross-checks unsuccessful[33]
Brent crude	$111.57	-0.06%	Single-sourced; the Fri 23 Oct three-way split remains unresolved, not re-attempted[33]
Henry Hub (NGZ6)	$2.898	+2.88%	Vendor instability escalated further — see Annex A[33]
Gold (futures)	$4,019.65	-0.79%	Wed base revised on re-fetch; spot/futures basis normal (approx. +0.27%)[33]
Silver (futures)	$51.980	-3.14%	Wed base revised on re-fetch; spot/futures basis normal (approx. +0.29%)[33]
Copper (LME cash)	$14,560.00/t	-0.79%	COMEX cross-check agrees directionally, -1.44% (magnitude gap disclosed)[38]
DXY	101.891	-0.14%	Dec'26 futures contract, not true spot — still unresolved; UUP -0.07% corroborates direction[33]
EUR/USD	1.1182	+0.25%	
GBP/USD	1.3379	+0.39%	
USD/JPY	157.81	-0.01%	Agrees directionally with DXY (both softer)
2-yr Treasury	4.61%	-6bp	
10-yr Treasury	4.98%	-7bp	
30-yr Treasury	5.32%	-5bp	

Treasury yields fell 5-7bp across the curve (Wednesday's 4.67%/5.05%/5.37% base matched the prior edition exactly) — a broad bond rally with only marginal curve-shape change (10s-2s roughly flat at 37bp vs. 38bp; 30s-10s a touch steeper at 34bp vs. 32bp), consistent with risk-off tech selling rather than a clean GDP/PCE reaction alone.[42] DXY and USD/JPY again pointed the same direction (both modestly softer); DXY itself remains sourced from Investing.com's Dec'26 futures contract rather than true ICE spot, UUP used as a directional cross-check.[33][41] Gold and silver both showed a vendor-revision discrepancy on their Wednesday base for a second straight edition: gold's published -0.20%/$4,066.67 re-fetched as -0.56%/$4,051.60; silver's published -1.01%/$53.963 re-fetched as -1.55%/$53.666; Thursday's changes above use the freshly re-fetched base, both discrepancies disclosed.[33] A Kitco spot-vs-futures check found both metals trading a normal sub-1% premium.[37] Henry Hub's data-quality problem has escalated across three fetches of the identical Tuesday 27 October print: $3.065 → $3.004 (edition 52) → $2.697 (this edition) — a roughly 12% cumulative drift on the same date from the same vendor. Thursday's $2.898 close is provisional; EIA's spot series (not a clean comparison to the futures contract used here) showed Tuesday at $2.76.[33]

5. Derivatives, volatility and positioning

The VIX complex gave back a small part of Wednesday's post-FOMC crush: VIX +1.72% to 17.20, VIX9D +1.73% to 15.87, VIX3M +0.78% to 19.37, VVIX +1.45% to 98.01, SKEW +1.54% to 151.03; VIX6M was exactly flat at 21.24 (possibly a thin-series round-trip, possibly a feed artifact; flagged, not asserted). Contango held clean throughout with no kink, despite the day's outsized single-stock moves — the options market continued to price Thursday as ordinary. No third chart this edition, same judgment applied at editions 50 and 52: a quiet vol complex doesn't make positioning the day's dominant story even on a newsy day.[43] A dedicated search for options-flow or skew commentary tied to Thursday's megacap reactions found nothing dated and credible — a notable null result, reported plainly. Dealer-gamma sources remain unusable: zerogex.io a 14th straight failure, SpotGamma an 8th.[44] The CFTC's next CoT report (Tue 27 Oct data) is due Fri 30 Oct 3:30pm ET, after this window's cutoff — confirmed nothing new has posted yet, as expected.[46] Funding markets were unremarkable: IORB held at 3.90% effective 29 Oct with ON RRP at 3.75%, matching Thursday's actual RRP operation (trivial $353mm usage); SOFR/EFFR's latest prints (Wed's 3.94%/3.88%) await Thursday's normal one-day lag.[48][46]

6. The day ahead

Date	Event	Consensus / context
Fri 30 Oct, before open	Chevron, Exxon Mobil, AbbVie, Newell Brands Q3 earnings	No 8-K filed as of cutoff; all four pending per third-party calendars

Fri 30 Oct, 3:30pm ET	CFTC Commitments of Traders	Covers Tue 27 Oct ES/NQ/RTY positioning
Fri 30 Oct eve. / Sat 31 Oct	China October PMI	Due approx. 9:30am CST Sat (approx. 9:30pm ET Fri); not yet posted[32]
By approx. late Thu 29 Oct / Fri 30 Oct ET	Bank of Japan Oct 29-30 decision	Pending as of cutoff; rate last at approx. 1.25% (18 Sep hike)
Mon 2 Nov	Apple fiscal Q4 2026 earnings	Shifted one session later than FY2025; first call under CEO Ternus
Tue 3 Nov	Reserve Bank of Australia decision	Going in at 4.60%; date secondary-sourced this edition
Wed 4 Nov	Riksbank decision	Going in at 1.75% (confirmed via riksbank.se)
Thu 5 Nov	Bank of England decision	Going in at 3.75% (held 6-3, 17 Sep)
Wed 11 Nov	Veterans Day	Equities open; confirm bonds/SOFR closure when the window reaches it
approx. 14 Nov	Q3 2026 13F filings due	Factor into a Monday-edition lead if the window includes it

Sector setup we take into Friday

- Technology and Communication Services carry the most downside risk given Thursday's concentrated megacap damage (Alphabet, Intel, ServiceNow, Fortinet, Marvell) — watch for analyst re-ratings.
- Energy's reaction function is tested directly Friday: Chevron and Exxon Mobil both report against a flat oil tape (WTI +0.09%, Brent -0.06%).
- Health Care's defensive leadership may extend if yields stay soft; Real Estate and Utilities both benefited from Thursday's same yield move.

Annex A — Assumptions, corrections and status

- Thursday's S&P/Dow/Nasdaq closes: AP/Reuters not indexed; used Yahoo Finance's live blog cross-checked against Investrade and SPY/DIA/QQQ/IWM proxies. A secondary push-alert headline claimed a steeper -0.5%/-1.57% move; the more detailed sources are preferred, discrepancy disclosed. Sector breadth: a direct 11-ETF fetch shows 9 of 11 higher vs. Investrade's 8 of 11 — direct fetch used per standing method.
- VIX6M closed exactly flat — possibly a thin-series round-trip or feed artifact, not asserted either way. A secondary Barclays "Underweight" downgrade claim on PayPal could not be substantiated and is contradicted by PYPL's flat +0.71% close — omitted as likely erroneous.[32]
- Marvell's -13.24% and ServiceNow's -26.95% declines are both verified; Marvell's "Lumentum talks" driver is contradicted by Lumentum's own flat close, and ServiceNow's driver (despite a beat-and-raise 8-K) could not be confirmed — the largest instance yet of this report's "beat does not guarantee a reaction" pattern.
- Government funding status not independently reconfirmed; not contradicted, carried forward.[32] US-China tariff thread: no new development, remains closed. ECB hold directly confirmed; Lagarde's remarks unavailable. Riksbank's hold/next-meeting dates confirmed; RBA's date not contradicted but unreachable directly.
- WTI/Brent single-sourced to Investing.com; EIA/wire checks unsuccessful. Copper: LME/COMEX agree directionally, differ in magnitude. No correction box: nothing prior found wrong; AT&T's Wed 21 Oct close dispute now resolved (-6.45% confirmed).

Annex B — Data points sought but not verified this edition

- A true ICE spot-DXY reading — Investing.com continues to serve the Dec'26 futures contract as "DXY"; MarketWatch's spot page could not be fetched.
- Henry Hub's Tue 27 Oct base (now a third, lower value, $2.697, across three fetches since edition 51) and Brent's Fri 23 Oct three-way split ($116.72/$111.70/$113.17) — both remain unresolved, the latter not re-attempted this edition.
- Dealer gamma (zerogex.io 14th, SpotGamma 8th straight failure), CME FedWatch (13th), Kalshi direct (17th), and a live Polymarket Dec 2026 FOMC contract (surfaced only an expired Dec 2025 one) — all failed again.
- Banxico's next policy-decision date remains unavailable. A historical-average FOMC-day move benchmark remains a permanent sourcing gap (last attempted edition 22).
- Options-flow/skew tied to Thursday's Amazon/Alphabet/Intel reactions, and a dated named-firm analyst action with a dollar price target — neither found despite dedicated searches.
- Kevin Warsh's Wed 28 Oct press-conference remarks — still not located. The ECB's 29 Oct press-conference content and any vote-split — only the unchanged-rate outcome was confirmable. The BoJ's Oct 29-30 decision — not posted as of cutoff, carried to edition 54.
- ServiceNow's and Fortinet's specific disappointing guidance sub-metrics — each move's magnitude is confirmed, the precise causal driver secondary-sourced or unconfirmed.
