

Daily Economic Briefing

Thursday, 10 September 2026 | Cutoff approx. 20:10 ET (00:10 UTC 11 Sept) | Edition 18 | Prepared for Alex

Assumptions & disclosure box

- Scheduler:** healthy — single fire, 11th consecutive clean fire since the edition-8 anomaly (no duplicate, no gap).
- Fed Chair Kevin Warsh** re-verified fresh via federalreserve.gov's Board of Governors bios; Powell remains a plain Governor.^[25]
- Premise correction:** the September FOMC rate decision falls on **Wednesday 16 Sept** (meeting runs Tue–Wed 15–16 Sept, decision 2:00pm ET Wed), not "Tuesday 16 Sept" as stated in recent editions' logs — confirmed directly against the Fed's own calendar this edition.^[26,27]
- Data-freshness:** CBOE's vol-curve feed again served genuinely fresh Thursday closes for VIX/VIX9D/VVIX but stale Wednesday timestamps for VIX3M/VIX6M/SKEW — same recurring pattern as prior editions.^[50]
- Disclosed conflicts:** gold's Comex pit settlement vs. a lower electronic-close read; PPI's two legitimate "core" definitions; oil's precise close-vs-Wednesday % change could not be independently computed despite a solid settlement source — detail inline and in Annex A.
- Delivery:** per Alex's standing instruction, this PDF is delivered in-session via SendUserFile only — no GitHub/Telegram step.

60-second read

- Iran/Hormuz war escalation was the day's dominant cross-asset driver** — Investrade called it the largest shipping attack since the conflict began — sending Brent to its highest settlement since May (\$101.21) and spot VIX to 17.84 (+8.4%), breaking a 28-session band confined to 14–17.^[38,39,51]
- Hotter-than-hoped PPI pushed the 10-year Treasury yield to a fresh 52-week high (approx. 4.97%)** and firmed Sept-16 FOMC hike odds from approx. 62% to approx. 70%, compounding the oil-driven inflation scare (diesel and heating oil both sharply higher).^[22,23,48,49,51]
- Equities fell for a 4th straight session** (S&P -0.6%, Nasdaq -0.7%, Russell -1.0%) as yields rose; Technology was the worst sector (-1.4%) while Communication Services was the only sector positive, on Meta's continuing AI-agent rally.^[1,2,3]
- Oracle beat big after the close** (revenue \$19.3bn +30% y/y, OCI +121%, RPO \$664bn) but the approx. +4.2% after-hours pop badly undershot the approx. 11.5% options-implied move — a quarter that cleared a very high bar without repricing the stock accordingly. Adobe also beat and raised guidance but fell after hours on growth-durability concerns tied to a surprise CEO transition.^[4,5,6,7,8,10,11]
- Copper crashed 4.7–5.2%** (Freeport -7.3%, Southern Copper -7.1%) on a Reuters report that the White House may reconsider its 15% refined-copper tariff, unwinding the tariff-driven front-running rally that had pushed the metal to record highs.^[21,44,45]

1. Market recap

S&P 500 7,591.70 -44.66 (-0.6%)	Dow Jones 52,064.10 -316.56 (-0.6%)	Nasdaq Comp. 26,081.72 -171.62 (-0.7%)	Russell 2000 2,890.95 -30.29 (-1.0%)	VIX 17.84 +1.38 (+8.4%)	WTI \$96.05 4-mo high (settle)
--	--	---	---	--------------------------------------	---

All four major indexes closed lower Thursday for a 4th consecutive losing session, per AP's wire wrap corroborated by an independent mirror and cross-checked against SPY's -0.60% print.^[1,2] A separate Yahoo Finance live-blog snapshot showed marginally different intraday levels; the AP wire (two independent mirrors plus the SPY cross-check) is treated as authoritative per house sourcing rules. Breadth deteriorated with the sell-off led by rate-sensitive Technology; Communication Services was the lone positive sector on Meta's continued advance.^[3]

2. Equities and earnings LEAD

Sector heat map (SPDR Select Sector ETFs, same-day closes)

XLC	XLP	XLV	XLV	XLE	XLI	XLF	XLU	XLRE	XLB	XLK
+0.60%	+0.05%	-0.44%	-0.55%	-0.58%	-0.72%	-0.33%	-0.98%	-0.83%	-1.23%	-1.41%

Source: Stockanalysis.com same-day SPDR sector-ETF closes, the standing methodology for a same-day 11-sector read.^[3] Technology was the session's worst sector as rate-sensitive names absorbed the yield spike; Communication Services was the only sector to close positive.

Earnings after Thursday's close

Oracle (ORCL) — Q1 FY2027: revenue \$19.3bn (+30% y/y, vs. approx. \$19.1bn consensus); non-GAAP EPS \$1.92 vs. \$1.73–1.74 consensus; GAAP EPS \$1.56 (+55%). Cloud revenue \$11.6bn (+62%); **Cloud Infrastructure (OCI) \$7.4bn (+121% y/y)**; RPO/backlog **\$664bn, up \$209bn y/y** and \$26bn sequentially, including >\$30bn of new AI-cloud contracts booked in-quarter. FY2027 guidance raised to "at least \$90bn" revenue (34% constant-currency growth) and non-GAAP EPS \$8.10 (from \$8.05); management cited GPU utilization at 97.9%.^[5,6] The stock closed the regular session at \$152.94 (-5.4%, pre-earnings de-risking), then traded up to approx. \$159.30 after hours (+4.1–4.2%, two independent quote sources agree closely).^[4,7,8,9] That realized move badly undershot the approx. 11.5% move options had priced in ahead of the print and Oracle's own 8-quarter average 1-day reaction of 16.1% — a sizable volatility crush for pre-earnings straddle buyers (chart below).^[10]

Adobe (ADBE) — Q3 FY2026: revenue \$6.76bn (+13%, beat); non-GAAP EPS \$6.13 (+15%); raised FY2026 guidance to revenue \$26.58–26.63bn and EPS \$24.45–24.50. AI-first ending ARR exceeded \$650m, +150%+ y/y. Alongside the beat, Adobe announced a CEO transition: 29-year chief Shantanu Narayen will be succeeded by Anil Chakravarthy effective 1 Dec 2026. Shares fell -2.14% after hours to \$243.50 on concerns over freemium-monetization timing and near-term growth momentum, despite the beat-and-raise.^[9,11]

Single-stock movers (regular session, biased to Tech/SaaS, staples, discretionary, telcos, industrials)

AeroVironment (AVAV) +10.9% to \$156.16 on a Q1 blowout (revenue \$480.5m vs. \$456.1m cons.; EPS \$0.59 vs. \$0.25; bookings +71% to \$683m; record \$1.5bn backlog).^[12] **Apple (AAPL)** +3.6% to \$326.57, extending Wednesday's foldable "iPhone Duo" launch rally after Evercore said Apple would "sell every iPhone Duo it can build" in its first six months.^[14,15] **Reddit (RDDT)** approx. +5% on positive user-growth data; **Elevance Health (ELV)** approx. +4% on a rotation into managed

care.^[13] **Meta** extended its recent advance after JPMorgan upgraded to Overweight (PT \$640 → \$820) on the "Muse" AI-agent launch's app-store traction and ad-headroom thesis — the read-through behind Communication Services' sector outperformance.^[16] On the downside: **Skillsoft (SKIL)** -34.2% to \$4.19, the session's largest decliner, after cutting FY27 revenue guidance to \$380–390m and missing Q2 revenue (\$98.2m vs. \$125.4m cons.) despite an EPS beat.^[17,18] **American Eagle (AEO)** -4.7% — a Q2 beat was flattered by a one-time \$161m tariff refund masking a 1% comp decline at the core banner; BMO had just initiated at Market Perform/\$18.^[19] **Macy's (M)** -4.7% to \$20.50 despite a beat-and-raise, on investor skepticism toward the raise.^[20] **Freeport-McMoRan** -7.3% and **Southern Copper** -7.1% on the copper price plunge (Section 4); **Intel** -5.7% on profit-taking; broader semis (Micron, Nvidia) softer as rising yields pressured richly-valued Tech.^[21] Booking Holdings, which fell on Wednesday's adverse EU court ruling, recovered +0.5% Thursday; no fresh Thursday-dated catalyst was found for Casey's, Signet, GameStop or Marvell (Annex A).

3. Macro, policy and rates

PPI (August data, released Thursday): headline final-demand +0.4% m/m (in line with consensus), +5.4% y/y (vs. 5.3% cons., slightly hot). Core is genuinely ambiguous this month across two legitimate BLS measures: the traditional ex-food-and-energy read came in soft at +0.2% m/m/+4.6% y/y (vs. 0.3% cons.), while BLS's own "less foods, energy, and trade services" core ran +0.3% m/m/+4.7% y/y.^[22,23,24] The y/y beat and firm services-linked core were enough to push the 10-year Treasury yield to a fresh 52-week high and lift Sept-16 hike odds from approx. 62% pre-print to approx. 70% (Section 5).

FOMC: blackout remains in effect (began 5 Sept) through the meeting; the committee meets Tue–Wed 15–16 Sept with the decision at 2:00pm ET **Wednesday** — a day-of-week correction to recent editions' logs, confirmed against the Fed's own calendar.^[26,27] No Fed speakers were identified Thursday, consistent with blackout; the last pre-blackout signal remains Governor Waller's 3 Sept dovish lean toward holding steady.^[28]

Iran/Hormuz: the tanker war escalated further Thursday — Investrade characterized it as the largest shipping-lane attack since the conflict began.^[51] Separately, Houthi forces reportedly seized the Red Sea port city of Mocha near the Bab el-Mandeb Strait; Saudi Arabia responded with retaliatory strikes, and the UN Security Council convened on the widening Yemen dimension of the conflict.^[29] **ECB/BoE hike bets grew** on the sustained oil surge (markets pricing approx. 90bp of further ECB tightening by Dec-2027); Germany's 10-year Bund yield hit its highest level since 2011.^[30] **Canada tariffs**: no fresh Thursday-specific development; the C\$27.6bn retaliatory tariffs (effective Tue 8 Sept) and the US's planned 29 Sept counter-ban on Canadian alcohol/dairy/motorcycles both remain on track.^[31,32] Initial jobless claims (week ended 5 Sept, released Thursday): 206,000 vs. 205,000 consensus (prior week revised to 207,000).^[37]

4. Commodities and FX

Oil (WTI settle)	Oil (Brent settle)	Gold (Comex settle)	Silver	Copper	DXY	USD/CAD	10Y UST
\$96.05 (4-mo high)	\$101.21 (May high)	\$4,364.50 (-1.2%)	approx. \$63.6 (-5.5%)	approx. \$6.45–6.49 (-4.7% to -5.2%)	99.09 (+0.27%)	1.3833 (+0.20%)	approx. 4.97% (52-wk high)

Oil settled at its highest level in four months — WTI \$96.05, Brent \$101.21 — after spiking intraday well above those levels (readings into the \$102–109 range across sources) on the Iran/Hormuz shipping attacks before paring gains into the close; CNBC's own headline captured the shape as "reverses course to slip, but Brent stays above \$100."^[38,39] **Gold's** Comex pit settlement was \$4,364.50 (-1.17%), though a continued slide into the later electronic session brought secondary-market reads down to approx. \$4,317–4,326 (-1.7% to -1.8%) — both cited, pit settlement treated as primary.^[40,41] **Silver** fell far harder than gold, to approx. \$63.57 (-5.5%) on Trading Economics' closing read — a notably large single-day move that a second same-close source could not corroborate; treat with caution pending confirmation.^[42]

Copper crashed 4.7–5.2% to approx. \$6.45–6.49/lb after Reuters reported the White House may reconsider its 15% refined-copper tariff, unwinding the tariff-driven front-running rally that had carried the metal to record highs (Freeport -7.3%, Southern Copper -7.1%, Section 2).^[44,45] The metal's 2026 record remains the wire-corroborated approx. \$6.85–6.87/lb (TASS, Dec-26 contract, set 8 Sept) — still without an exchange-certified settlement citation despite repeated attempts (Annex A).^[43] **DXY** firmed to 99.09 (+0.27%) and **USD/CAD** to 1.3833 (+0.20%); EUR/USD held just below the mid-1.1600s near a 1.5-week high and USD/JPY recovered above 154.00, both capped by rising Fed-hike bets and Iran-driven risk aversion (exact closes unconfirmed — Annex A).^[46,47] The **10-year Treasury yield** rose to approx. 4.97%, a fresh 52-week high, on the combination of the hot PPI print and oil-driven inflation pass-through (diesel and heating-oil prices both sharply higher).^[48,49] Official Treasury par yields are not posted in time for this cutoff; figures above are secondary-market levels per house convention.

Commodities & FX levels

Instrument	Level	Chg
WTI crude (settle)	\$96.05/bbl	4-month high
Brent crude (settle)	\$101.21/bbl	highest since May
Gold (Comex pit settlement)	\$4,364.50/oz	-1.17%
Gold (later electronic-session read)	approx. \$4,317–4,326/oz	-1.7% to -1.8%
Silver	approx. \$63.57/oz	-5.5% (single-sourced)
Copper (Thursday close)	approx. \$6.45–6.49/lb	-4.7% to -5.2%
Copper 2026 record (standing, unconfirmed exchange-certified)	approx. \$6.85–6.87/lb	set 8 Sept
DXY (US Dollar Index)	99.09	+0.27%
USD/CAD	1.3833	+0.20%
EUR/USD	approx. 1.158–1.162	near 1.5-wk high
USD/JPY	above 154.00	exact close unconfirmed
10Y US Treasury yield	approx. 4.97%	52-week high
VIX (spot)	17.84	+8.4%

Optional levels table per house convention when Section 4/5 content runs light on page space; figures and sourcing as detailed above.^[38,39,40,41,42,44,45,46,47,50,51,52]

5. Derivatives, volatility and positioning

Oracle's pre-earnings options-implied move vs. its trailing 8-quarter average reaction vs. the realized after-hours move — a clean illustration of Thursday's volatility crush (Section 2).^[10]

VIX broke above 17 for the first time in 28 sessions, closing at 17.84 (+8.4%, intraday high 18.17) on the combination of the Iran/Hormuz shock and the hot PPI print pushing Sept-16 hike odds to approx. 70%.^[50,51] VIX9D (17.70, +13.5%) and VVIX (102.66, +8.6%) both carried genuinely fresh Thursday timestamps on CBOE's own delayed-quotes feed; VIX3M (18.87), VIX6M (20.63) and SKEW (149.25) were still serving stale Wednesday prints on repeated checks — the same recurring staleness pattern noted in prior editions.^[50] The last independently verified futures curve (Wednesday) showed a normal contango from the front month out through May-2027; Thursday's full curve could not be confirmed given the cash-index staleness above (Annex A).^[52]

CFTC Commitments of Traders remains dated as of Tuesday 1 Sept; the next report (data as of Tuesday 8 Sept) is due Friday 11 Sept per the standard Friday-with-Tuesday-data lag — no new positioning data as of this cutoff.^[53] **Oracle options** priced an approx. 11.5% implied move into the print — well above the approx. 4.1–4.2% realized after-hours reaction — with dealer positioning described as positive-gamma below approx. \$135 and a negative-gamma acceleration zone \$168–179; the stock's after-hours print near \$159 sits inside that band's lower half.^[10] Funding conditions were unremarkable: SOFR printed 3.64% for 9 Sept (one-day lag is standard; no repo-market stress reported).^[54]

6. The day ahead — Friday 11 September

Time (ET)	Release	Consensus
8:30am	US CPI (August)	headline y/y approx. 3.3–3.4% (FactSet 3.3%, Kiplinger 3.4%); core y/y approx. 2.4% — the decisive print for the 16 Sept FOMC decision
10:00am	U. Michigan consumer sentiment, prelim. (Sept)	approx. 51–51.7, essentially flat vs. August's 51.7 final
3:30pm	CFTC Commitments of Traders	data as of Tue 8 Sept — first fresh positioning read since 1 Sept

Sources: [33,34,35,36,53]

This week's known catalysts

Date	Event
Fri 11 Sept	US CPI (Aug); UMich prelim Sept sentiment; fresh CFTC CoT (data as of 8 Sept)
Tue–Wed 15–16 Sept	FOMC meeting; rate decision + press conference 2:00pm ET Wednesday
Fri 18 Sept	September quarterly options/futures expiration ("triple witching")
Mon 29 Sept	US ban on Canadian alcohol, dairy and motorcycle imports takes effect

Sector setup we take into Friday

- Technology re-priced lower on the yield spike (XLK -1.4%, worst sector) — Friday's CPI is the next test of whether the AI-capex trade can absorb a further leg higher in real rates.
- Communication Services is the one pocket of sustained sponsorship (Meta's Muse-driven re-rating); Oracle's underwhelming after-hours reaction despite a blowout quarter suggests the market is now demanding delivery, not just guidance raises, from mega-cap AI infrastructure names.
- Materials/copper-linked names (FCX, SCCO) face a tariff-policy air-pocket risk following the White House's reported tariff reconsideration — a genuine two-sided catalyst into any confirming or denying headline.
- Consumer discretionary retail earnings (AEO, M) are being read skeptically even on beats — the market wants comp-sales quality, not one-time items, ahead of the holiday-quarter setup.

Annex A — could not be verified this edition

- NYSE/Nasdaq advance/decline breadth for Thursday's session — no source located; SPDR sector-ETF proxy used instead.
- A distinct Reuters "preliminary vs. updated" market-wrap pair — only the AP wire wrap was located this edition; treated as authoritative per standing house rule.
- Thursday-specific price moves or catalysts for Casey's General Stores, Signet Jewelers, GameStop and Marvell — all four appear to have had no fresh Thursday news.
- 2-year and 30-year Treasury yield closes for Thursday — no source found for the 2-year; the 30-year remains single-sourced to Wednesday's level.
- Precise closing prints (with % change) for EUR/USD and USD/JPY — only approximate directional levels could be confirmed.
- VIX3M, VIX6M and SKEW Thursday closes — CBOE's feed served stale Wednesday timestamps on repeated checks.
- A full, confirmed Thursday VIX futures term structure — only a Wednesday snapshot could be verified.
- An exchange-certified (CME/COMEX settlement) figure for copper's 2026 record high — the standing approx. \$6.85–6.87/lb (8 Sept, TASS) remains wire/aggregator-sourced only.
- Official Treasury H.15 par yields for Thursday's session — not posted in time for this cutoff; secondary-market levels used per standing convention.
- A second, independent close-level confirmation for silver's approx. -5.5% move.

Method note

Every figure above carries a named, dated source; where sources disagreed the more authoritative was used and the disagreement disclosed (Section 4, Annex A). Index closes use AP's wire wrap, cross-checked against a second mirror and SPY. Sector rotation uses same-day SPDR Select Sector ETF closes (Stockanalysis.com) as the standing proxy for an unavailable same-day GICS table. VIX-curve series were checked individually for a fresh same-day `last\_trade\_time` rather than assumed fresh from a responding endpoint. No figure in this briefing was estimated, inferred, or filled from memory — items that could not be sourced are listed in Annex A rather than approximated.
