Daily Economic Briefing

Wednesday 28 October 2026 | Window: Mon 26 Oct 2026 20:00 ET – Tue 27 Oct 2026 20:21 ET (Tue 27 Oct close/after-hours, the window's one NYSE session) | Research cutoff Tue 27 Oct 2026, 20:21 ET | Edition 51

60-second read

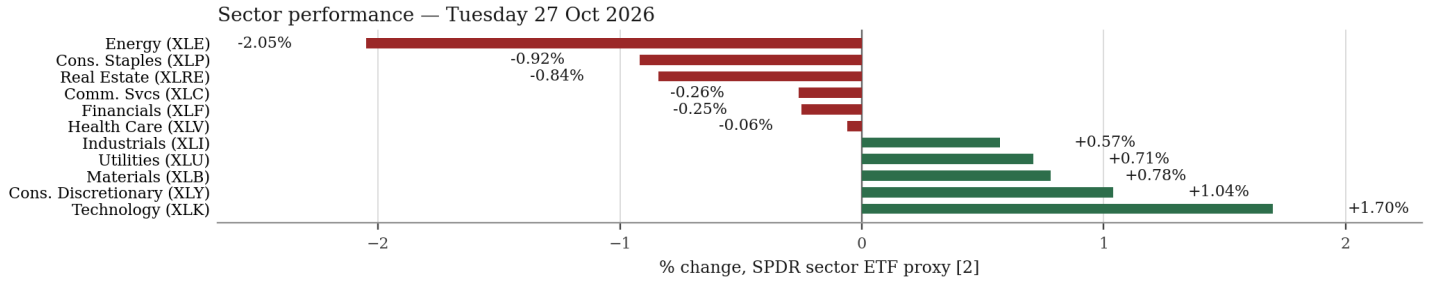

1. The FOMC's meeting day one passed quietly: the blackout held clean through cutoff[8], and markets now price a near-lock **96% hold** for Wednesday's approx. 2:00pm ET decision — though December odds stay internally split on the same aggregator (75% headline vs. 78% meeting-path table), a discrepancy logged for a fifth straight edition[9].
2. Equities extended their rally a third straight session (S&P 500 +0.60%, Nasdaq Composite +1.17% to a fresh high) but breadth was narrow — AP's own wire says "most S&P 500 stocks fell," and only 5 of 11 sectors closed higher, with Technology (+1.70%) and a handful of AI/chip mega-caps doing the lifting[1][2].
3. A dense pre-FOMC earnings morning scrambled the usual beat/reaction logic again: Boeing's core-EPS miss on a shrinking-but-still-negative quarter sent it down **-10.69%**, while JetBlue rallied **+18.99%** despite missing on EPS, on a strong Q4 capacity-revenue guide[4].
4. The Brent crude sourcing problem flagged as this report's top open item got worse, not better: an independent cross-check against ICE, EIA and wire sources turned up a *third* candidate figure for Friday's close, and the same vendor's Monday gold and silver levels were separately found revised out from under the prior edition's own published numbers[22][23][18].
5. Vol priced unusually little event risk into Wednesday's decision: VIX9D fell 7.1% to 16.65 — below the headline VIX itself — while VVIX and SKEW also fell, a term-structure signal closer to complacency than hedging on the eve of a Fed decision[25].

1. Market recap

S&P 500	Dow Jones	Nasdaq Composite	Nasdaq-100 (QQQ proxy)	Russell 2000	VIX
7,722.60	**52,377.57**	**26,477.81**	**$721.25**	**2,818.87**	**17.52**
+45.83 / +0.60%	+15.99 / +0.03%	+308.43 / +1.17%	+1.27%	+32.45 / +1.17%	-4.73%

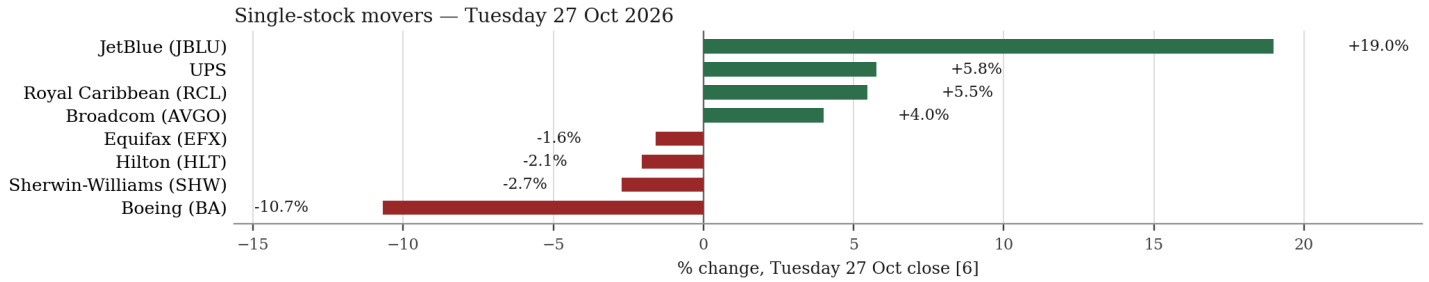

A third straight up session: the S&P 500 and Russell 2000 both gained roughly six-tenths to over a percent, and the Nasdaq Composite closed at a fresh record. AP's "How major US stock indexes fared" wire posted and was fetchable for the first time in four editions (via a syndicated mirror)[1], and reconciled exactly against the prior edition's logged Monday closes and against an ETF-proxy cross-check (SPY +0.56%, DIA +0.06%, IWM +1.15%, all consistent with their tracked indices)[3]. Week-to-date the S&P is +1.3%, Nasdaq +2%, Russell 2000 +1.5%; year-to-date the S&P is +12.8%, Nasdaq +13.9%[1]. The gain was narrower than the headline numbers suggest: AP's own wire states most individual S&P 500 names fell Tuesday, with the index-level advance concentrated in a handful of influential AI/chip names[1] — consistent with the sector breadth below. The Nasdaq-100 has no directly-sourced index-level print for this date; QQQ's ETF proxy (+1.27%) is used and disclosed as such, not the index itself (Annex B).

Sector performance

5 of 11 SPDR sector ETFs closed higher Tuesday, fetched directly from stockanalysis.com's ETF price-history pages[2]. Technology (+1.70%) led for a second straight session on continued AI/chip strength (the same Micron/AMD/Broadcom/Nvidia complex that drove Monday's rally), with Consumer Discretionary (+1.04%), Materials (+0.78%), Utilities (+0.71%) and Industrials (+0.57%) also green. Energy was the clear laggard (-2.05%), tracking the session's broader oil pullback (WTI -1.57%, Brent -1.20%; see Section 4) rather than a distinct sector-specific catalyst — none was found despite a dedicated search (Annex B). Consumer Staples (-0.92%) and Real Estate (-0.84%) lagged on an apparent rotation out of defensive/yield-sensitive names into the AI trade, with Communication Services, Financials and Health Care all roughly flat-to-down.

2. Equities and earnings

Ticker	Move	Driver

JetBlue (JBLU)	+18.99%	Q3 adjusted EPS -$0.60, missed the -$0.55 estimate, but Q4 unit-revenue guide of +18-22% y/y and management's demand commentary drove the rally despite the miss — GAAP loss -$0.68/sh[4][6]
UPS	+5.75%	Adjusted EPS $1.69 beat $1.64 consensus (GAAP $1.37, includes a $279mn transformation/impairment charge); raised FY26 revenue, margin and free-cash-flow guidance[4]
Royal Caribbean (RCL)	+5.46%	Adjusted EPS $6.57 beat $6.45; guests +9% to 2.7mn, load factor 112%[4][5]
Broadcom (AVGO)	+4.00%	AP's wire ties the move to continued coverage of Broadcom's AI-chip financing arrangement with Anthropic; a freshly-dated Tuesday announcement could not be independently pinned down[1]
Equifax (EFX)	-1.60%	Continuation of the unexplained multi-session pullback first flagged two editions ago; no new catalyst found despite a further search[6]
Hilton (HLT)	-2.06%	Beat on adjusted EPS ($2.45 vs. approx. $2.38 est.) and RevPAR (+5.8%) but cut FY26 adjusted EBITDA guidance[4]
Sherwin-Williams (SHW)	-2.73%	EPS $3.63 missed the $3.72 estimate[5][6]
Boeing (BA)	-10.69%	Core EPS -$0.34 missed the -$0.21 estimate (GAAP -$0.26, narrowed sharply from -$7.14 a year ago); Commercial Airplanes posted a $697mn operating loss on delivery-mix and production-rate costs, plus a approx. $0.7bn DOJ settlement cash payment[4]

Several more names reported beat-and-fell or miss-and-rose outcomes Tuesday, extending this report's running "a clean beat is not sufficient to assume a positive reaction" theme: PayPal (+2.00%, EPS $1.45 beat $1.34) and American Tower (-2.36%, EPS $2.87 beat a low $1.66 bar but still fell) moved in opposite directions to their own earnings quality; Corning (-1.13%) and S&P Global (-0.38%) both beat modestly and still fell[5][6].

After-hours reporters (Tuesday evening close; reaction will carry into Wednesday's regular session, not yet confirmed to hold): NXP Semiconductors beat (EPS $4.20 vs. $4.17) yet fell -6.90% after hours following a +3.12% regular session; Robinhood beat (EPS $0.60 vs. $0.57) yet fell -7.63% after hours following a +1.85% regular session; Visa missed narrowly on non-GAAP EPS ($3.48 vs. $3.50) and fell -1.15% after hours while raising its dividend 16%[4][7]. Caesars missed badly on adjusted EPS (-$0.61 vs. -$0.11 est.); its after-hours reaction could not be independently verified this edition (Annex B)[5].

Analyst actions: no sell-side upgrade, downgrade or price-target change could be reliably dated to Tuesday's session despite a dedicated multi-query search — see Annex B rather than repeating an undated or mis-dated claim.

3. Macro, policy and rates

Central bank	Policy rate	Last change	Next decision
Federal Reserve	3.75%–4.00%	+25bp, 16 Sept 2026	Wed 28 Oct 2026, approx. 2:00pm ET (meeting day 1, 27 Oct, passed with no decision)
Bank of Canada	2.25%	not re-confirmed this edition	Wed 28 Oct 2026, 9:45am ET
European Central Bank	Deposit 2.50% / refi 2.65% / lending 2.90%	eff. 16 Sept 2026	Decision/press conf. approx. 28–29 Oct 2026 (29 Oct press-conf. date ECB-direct[12]; meeting-start date still secondary-sourced only)
Bank of England	3.75%	held, 17 Sept 2026 (6-3 vote)	Thu 5 Nov 2026
Bank of Japan	approx. 1.25%	+25bp, 18 Sept 2026 (eff. 24 Sept)	29–30 Oct 2026 — rate remains a live fact pending this outcome
Swiss National Bank	0%	held, 24 Sept 2026	10 Dec 2026
Norges Bank	4.50%	+25bp, 24 Sept 2026	17 Dec 2026
Riksbank	1.75%	held, eff. 30 Sept 2026	not re-confirmed this edition
Reserve Bank of Australia	4.60%	+25bp, 29 Sept 2026 (eff. 30 Sept)	not re-confirmed this edition
Banxico	6.50%	held, 24 Sept 2026	unavailable — unconfirmed again this edition[13]

The FOMC's blackout period held clean through Tuesday's cutoff — no Fed-speaker commentary or leaks found[8]. Rate-path odds (DeFi Rate's Kalshi/Polymarket-blended aggregator) now price Wednesday's decision at approx. **96% hold / 4% hike**, a further dovish drift from the prior edition's 93%/7%. December's odds show the same internal page-vs-table inconsistency logged for a fifth straight edition: a 75% headline hike probability against a 78% figure on the aggregator's own separate meeting-path table[9]. Kalshi's own direct fetch failed again (HTTP 429, a 15th consecutive failure); CME FedWatch timed out again (an 11th consecutive failure); Polymarket's own site displayed only an expired, wrong-year (2025) market and was not usable[10][11]. The Conference Board's October Consumer Confidence Index, released Tuesday 10:00am ET (inside this window), jumped 7.5 points to **91.7** (present situation 120.4, up 8.6pts; expectations 72.6, up 6.9pts, partially reversing three straight monthly declines) — a notably stronger domestic print than the muted tone of recent prior months[15]. The Bank of Canada decides Wednesday at 9:45am ET, same day as the Fed, with no change expected from 2.25%; the ECB's Governing Council decision and press conference land Thursday (29 Oct press-conference date directly confirmed via ecb.europa.eu; the Council's own meeting-start date, usually cited as 28 Oct, remains secondary-sourced only after a further direct attempt)[12]. Banxico's next decision date remains unconfirmed after another direct attempt at banxico.org.mx, which redirected to a stale mirror with no usable calendar content[13].

4. Commodities and FX

Instrument	Level	Chg	Note
WTI crude	$100.16	-1.57%	third straight pullback from Friday's spike; no dated catalyst found[18]
Brent crude	$109.41	-1.20%	Friday's base remains disputed — see note below[18]
Henry Hub nat. gas (NGZ6, Dec)	$3.065	+1.42%	front-month roll to December confirmed complete[18]

Gold (futures)	$4,075.95	+0.93%	spot $4,062.80 (Kitco), normal futures/spot basis[18][20]
Silver (futures)	$54.530	+0.35%	spot cross-check inconclusive, no standalone Kitco quote[18]
Copper (LME cash)	$14,625.00/t	+0.86%	COMEX converts to approx. $14,683/t, reconciles within 0.4%[19][18]
DXY	102.38	+0.41%	agrees directionally with USD/JPY, 2nd straight session[18]
EUR/USD	1.1127	-0.42%	[18]
GBP/USD	1.3306	-0.28%	[18]
USD/JPY	157.99	+0.30%	[18]
UST 2-yr	4.70%	+2bp	home.treasury.gov official par yield[21]
UST 10-yr	4.99%	-1bp	[21]
UST 30-yr	5.30%	-1bp	curve modestly bull-flattened at the long end[21]

This report's highest-priority open sourcing item deepened rather than resolved this edition. A dedicated attempt to independently arbitrate Friday 23 October's disputed Brent close — against ICE's own settlement methodology, EIA's daily spot series, and Reuters/Xinhua wire coverage — found no authoritative primary source, and instead surfaced a *third* candidate figure ($113.17, from an uncited, internally self-contradictory secondary aggregator) alongside the two already in dispute ($116.72 originally published vs. $111.70 on a later re-fetch from the same vendor)[22][23][24]. The one solid anchor: WTI's $103.27 Friday close is stable across every source checked. Friday's Brent level should be read as a disclosed $111.70–$116.72 range, not a single figure, until an authoritative source surfaces (Annex B). The same vendor-revision problem recurred in gold and silver: Monday 26 October's previously-published closes (gold +0.27% to $4,018.65, silver -0.04% to $53.928, per edition 50)[31] were re-quoted on this edition's fetch as $4,038.40 (+0.76%) and $54.341 (+0.73% — the direction itself flipped from down to up)[18]. Treat the prior edition's Monday metals levels as superseded; Tuesday's % changes above are computed against the newly-fetched Monday base. DXY and USD/JPY moved in the same direction for a second straight session, extending a streak that has held more often than not across recent editions.

5. Derivatives, volatility and positioning

Series	Level	Chg
VIX	17.52	-4.73%
VIX9D	16.65	-7.09%
VIX3M	19.57	-1.86%
VIX6M	21.42	-0.97%
VVIX	99.45	-1.95%
SKEW	149.22	-1.16%

The term structure stayed in clean contango (VIX9D < VIX < VIX3M < VIX6M) and compressed further at the front end heading into Wednesday's decision[25]. That compression is notable precisely because VIX9D's own measurement window spans the FOMC decision itself, yet it fell the hardest of the six series — an unusually small amount of event premium priced in, reading closer to complacency than defensive hedging on the eve of a Fed decision. Cboe's daily options statistics (total put/call 0.86, equity put/call 0.60) showed nothing unusual tied to Tuesday's movers or FOMC positioning, extending a 14-plus-edition low-yield stretch on this sub-item; no notable single-stock gamma story was found[26]. Dealer gamma remains fully unusable: zerogex.io's 12th straight placeholder-dash failure and SpotGamma's 6th straight client-side-only failure[27]. CFTC's Commitment of Traders confirmed no new data has posted, as expected — the next report (covering Tuesday 27 October positioning) is due Friday 30 October, 3:30pm ET, outside this window[17]. Funding sat comfortably mid-range into the Fed: SOFR 3.93%, EFFR and OBFR both 3.88% as of Monday's fixings (Tuesday's not yet published at cutoff), no stress signal[28].

6. The day ahead

Date	Event	Consensus / context
Wed 28 Oct, 9:45am ET	Bank of Canada decision	2.25% going in; no change expected
Wed 28 Oct, approx. 2:00pm ET	FOMC decision	96% hold / 4% hike priced[9]
Wed 28 Oct, approx. 2:30pm ET	FOMC press conference (Chair Warsh)	non-SEP meeting, no fresh dot plot expected; timing inferred, not primary-confirmed
Thu 29 Oct, approx. 9:45am ET	ECB decision + press conference	2.50% deposit rate going in; press-conf. date ECB-direct-confirmed[12]
Thu 29 Oct, 8:30am ET	Q3 2026 GDP, advance estimate	approx. +3.6% annualized (single secondary source / Atlanta Fed GDPNow context, not a bank-survey consensus); release timing confirmed directly[14][16]
Thu 29 Oct, 8:30am ET	September 2026 PCE / core PCE	core approx. +3.1% y/y (single secondary source, not independently confirmed); release timing confirmed directly[14][16]
29–30 Oct	Bank of Japan decision	approx. 1.25% going in; rate stays live pending outcome
Fri 30 Oct, 3:30pm ET	CFTC Commitment of Traders	covers Tue 27 Oct data, first fresh report since 23 Oct[17]
approx. Fri 30 Oct	Chevron, Exxon Mobil, AbbVie, Newell Brands earnings	expected; none has reported yet
approx. Sat 31 Oct	China October PMI	date not fully primary-confirmed[16]

Sector setup we take into Wednesday's session

- Technology/AI-chip leadership enters FOMC week on a third straight up session — a rate-sensitive, long-duration-growth group worth watching for a hawkish-surprise unwind even though a hold is heavily priced.
- Energy is the one sector showing sustained weakness, tracking oil's pullback from Friday's spike; Wednesday's EIA weekly petroleum status report lands the same morning as the Fed decision.
- Travel/leisure delivered a genuinely mixed earnings picture Tuesday (Royal Caribbean and JetBlue rallied, Hilton fell) — the market is discriminating on forward guidance (RevPAR/RASM trajectory) rather than rewarding headline beats uniformly.
- NXP Semiconductors and Robinhood both beat-and-fell after hours Tuesday, adding two fresh data points to this report's running "a beat does not guarantee a positive reaction" theme; watch Wednesday's regular session for whether either after-hours move holds.

Annex A — Assumptions, corrections and status

- No correction box this edition — no figure published in a prior edition was found to be wrong on a premise level (the Brent and gold/silver vendor-revision items below are a disclosed, recurring sourcing-integrity caveat, not an error this report made, consistent with how prior editions have handled the same trap).
- Confluent (CFLT), flagged in the prior edition's open threads as a possible Tuesday Q3 reporter, is in fact delisted from Nasdaq since 17 March 2026 following its acquisition by IBM — it no longer exists as a public, earnings-reporting company[29]. Removed from future watch lists.
- AP's "How major US stock indexes fared" wire was fetchable this edition (via a syndicated mirror) for the first time in four editions — the fallback tier used at editions 48-50 was not needed this time.
- Broadcom's +4.00% move was attributed by AP's wire to continued coverage of a Broadcom-Anthropic AI-chip financing arrangement; a freshly-dated Tuesday announcement specifically could not be pinned down independently.
- Energy sector's -2.05% Tuesday decline is inferred to track the day's oil pullback rather than a distinct catalyst; no dated news story specific to the sector was found.
- The ECB Governing Council's own exact meeting-start date (usually cited as 28 Oct) remains secondary-sourced only; only the 29 Oct press-conference date is ECB-direct-confirmed, a gap that has now persisted across several editions.
- Banxico's next policy decision date remains unconfirmed despite a further direct attempt at banxico.org.mx.
- Riksbank's and the RBA's next-decision dates were not re-fetched this edition; carried forward unchanged from the prior edition's direct confirmation.
- Q3 GDP and September PCE consensus figures used in the day-ahead table are single-sourced to a secondary economic calendar (plus Atlanta Fed GDPNow context for GDP), not a named bank or wire-service survey consensus.
- Kalshi's direct fetch (15 straight failures) and CME FedWatch's direct fetch (11 straight failures) both failed again; Polymarket's own site displayed only an expired 2025 market. DeFi Rate's blended aggregator remains the working source, though its own December headline-vs-table inconsistency persists for a fifth straight edition.
- Dealer gamma (zerogex.io, SpotGamma) both failed again (12th and 6th straight failures respectively) — fully unusable, as established in prior editions.
- Gold's and silver's Monday 26 October 2026 levels, as logged in the prior edition, were found revised at the vendor (Investing.com) on this edition's re-fetch — see Section 4 for detail; treat the previously-published Monday levels for both metals as superseded.
- No third chart was used this edition: neither a fresh CFTC report nor a genuinely dominant options/volatility story was present — the derivatives research pass's own read characterized Tuesday as "a quiet positioning day."

Annex B — Data points sought but not verified this edition

- Nasdaq-100 (NDX) exact index closing level for Tuesday 27 Oct (QQQ ETF proxy, +1.27%, used instead).
- Brent crude's Friday 23 October 2026 close remains unresolved among three candidate figures ($116.72 / $111.70 / $113.17) despite a dedicated independent cross-check (ICE, EIA, Reuters/Xinhua wire, Oilprice.com) — no authoritative primary source could be retrieved to arbitrate.
- A dated, sourced catalyst for Tuesday's oil pullback (WTI -1.57%, Brent -1.20%).
- Silver spot cross-check vs. Kitco (no standalone quote shown this edition; only an implied gold/silver ratio).
- COMEX copper's exact Tuesday settlement via a named CME source (an Investing.com-derived figure was cross-checked via tonne-conversion against the LME print instead).
- Named-firm sell-side analyst upgrades/downgrades/price-target changes dated specifically to Tuesday 27 Oct (a genuine multi-query search found nothing reliably dated to this session).
- Caesars' (CZR) after-hours/next-session reaction to its large adjusted-EPS miss.
- Waste Management's (WM) stock-price reaction to its EPS miss this session.
- A bank- or wire-survey-grade consensus (rather than a single secondary calendar's figure) for Thursday's Q3 GDP advance estimate and September PCE.
- The exact date of China's October PMI release on stats.gov.cn (only a secondary calendar's 31 Oct date found; the NBS calendar page itself did not show the date in the fetched excerpt).
- This week's Treasury coupon-auction sizes and dates (only secondary-sourced via a non-Treasury calendar, not cross-checked against TreasuryDirect/home.treasury.gov auction announcements).
