Daily Economic Briefing

Thursday 13 November 2026 | Window: Wed 11 Nov 2026 20:00 ET – Thu 12 Nov 2026 approx. 20:21 ET (Thu 12 Nov close/AH, the window's one NYSE session) | Research cutoff approx. 20:21 ET 12 Nov 2026 | Edition 63

60-second read

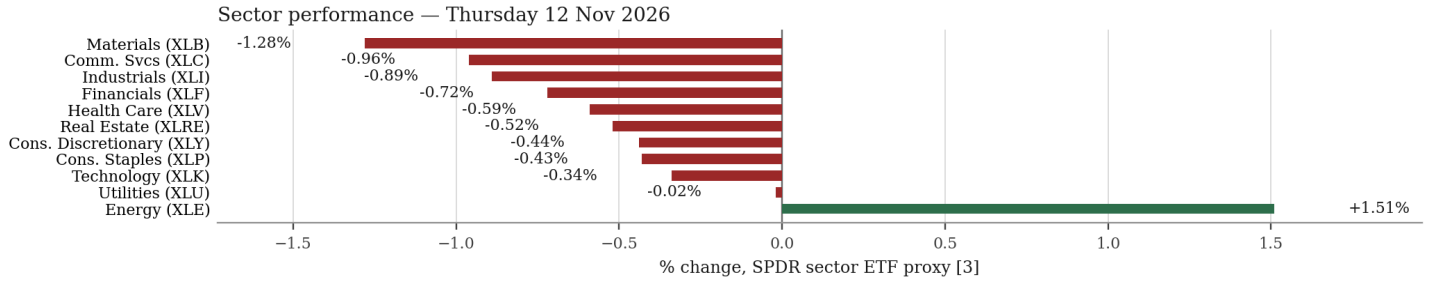

1. **Jensen Huang resigned as NVIDIA's President, CEO and a board member, effective immediately,** after the board's independent-counsel investigation into his undisclosed relationships, including with a Chinese businesswoman U.S. officials believe was tied to an intelligence effort — confirmed directly via NVIDIA's own 8-K.[1] CFO Colette Kress becomes interim CEO; Harvey Jones becomes the company's first-ever independent board chair.[1] NVDA fell as much as 16% intraday before closing -4.34% to $166.19, capping an approx. 11% weekly decline reported at roughly $500bn of erased market value.[2]
2. Equities pulled back broadly on the news and the week's hawkish repricing: S&P 500 -0.35% to 7,592.40, Dow -0.36% to 52,297.09, Nasdaq Composite -0.39% to 25,366.09, Russell 2000 -1.66% to 2,799.06 (small-caps hit hardest).[3] Breadth collapsed to just 1 of 11 sector ETFs higher (Energy +1.51%) from Wednesday's 10 of 11.[4]
3. December FOMC 25bp-hike odds firmed further to approx. 85-88.5% (Polymarket, Kalshi), a third straight edition of hawkish-leaning or unchanged readings, as Treasury yields jumped sharply on the first print since the Veterans Day closure (2-year +13bp to 4.86%, 10-year +12bp to 5.10%, 30-year +8bp to 5.43%).[5]
4. A dense earnings session: Corteva collapsed -24.30% on a Latin America-led guidance cut (its own 8-K);[6] Cisco and Nu Holdings both beat and raised after Thursday's close, but Cisco's after-hours reaction was muted despite a clean beat-and-raise — another instance of this report's standing "beat-and-raise guarantees nothing" pattern.[7]
5. VIX jumped +6.92% to 18.70 (CBOE's own feed, both known bugs absent today) on the NVDA-led risk-off; oil rallied (WTI +2.53%, Brent +3.30%) while gold fell -2.90% as yields rose.[8]

1. Market recap

S&P 500	Dow Jones	Nasdaq Composite	Russell 2000	VIX	10-yr Treasury
7,592.40	**52,297.09**	**25,366.09**	**2,799.06**	**18.70**	**5.10%**
-0.35%	-0.36%	-0.39%	-1.66%	+6.92%	+12bp

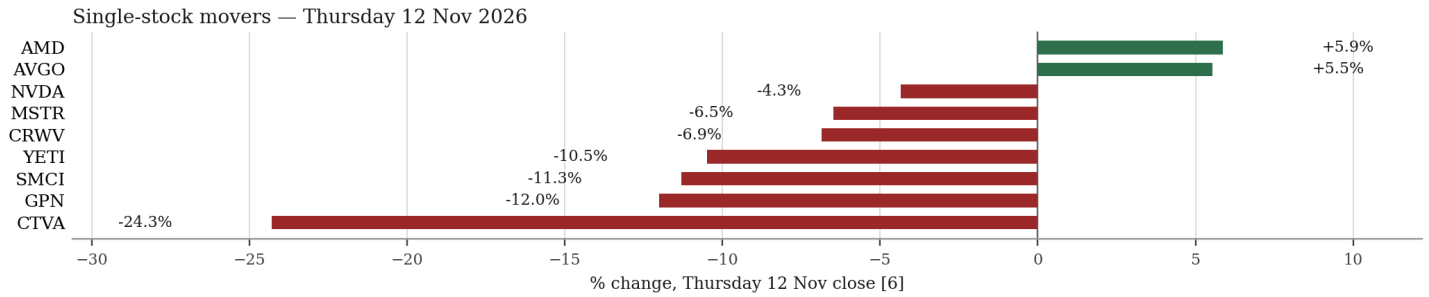

All four major indices closed lower Thursday, confirmed via AP's wire (lanacion.com.ar mirror) and cross-checked exactly against Yahoo Finance, with no disagreement between sources.[3] The Russell 2000's -1.66% decline was more than four times the large-cap indices' drop, consistent with the session's narrow, NVDA-driven character rather than a broad macro selloff. Breadth confirms the narrowness: only Energy (XLE, +1.51%) closed higher among the 11 SPDR sector ETFs, a sharp reversal from Wednesday's 10-of-11 broad advance.[4] No dated, session-specific driver could be independently verified for either Energy's outperformance or Materials' (XLB, -1.28%) underperformance; both are reported as verified price moves without a confirmed causal driver. A secondary MarketWatch/WSJ cross-check for the sector table failed again, a fourth consecutive edition — see Annex A.

Sector performance

Technology (XLK, -0.34%) held up far better than the broader market given NVDA's drag, suggesting the chip-sector reaction to the CEO transition was more company-specific than sector-wide — Broadcom (+5.54%) and AMD (+5.86%) both rallied the same session (see Section 2). Materials (-1.28%) and Communication Services (-0.96%) were the session's clearest laggards, both without a confirmed single-name driver.

2. Equities and earnings

Ticker	Move	Driver
NVDA	-4.34%	Jensen Huang resigned as President/CEO/director effective immediately (board accepted resignation 11 Nov, announced 12 Nov); CFO Colette Kress named interim CEO, Harvey Jones named first independent board chair — confirmed via NVIDIA's own 8-K[1] and corroborated by top-tier wires.[2] Stock fell as much

		as 16% intraday before paring losses.
CTVA	-24.30%	Q3 2026 net sales $1.59bn (-9% reported and organic); GAAP EPS -$0.08; adjusted operating EPS $0.06 (-57%); Latin America net sales -28% reported (Brazil volume -24%) on "elevated channel inventory and delayed purchasing" amid farmer liquidity constraints; FY2026 guidance cut to adjusted operating EBITDA $1.10-1.125bn and adjusted operating EPS $0.76-0.80 — confirmed via Corteva's own 8-K.[6] A separately claimed MSCI-index-deletion driver could not be confirmed and is excluded.
GPN	-12.01%	No session-specific driver could be independently verified; reported as a verified price move only.
SMCI	-11.30%	No session-specific driver could be independently verified; reported as a verified price move only.
YETI	-10.49%	A claimed guidance cut circulated but could not be confirmed as dated to this session; reported as a verified price move only.
CRWV	-6.86%	Pullback following Wednesday's +24.71% post-earnings surge on raised FY2026 guidance; no distinct Thursday-specific driver identified beyond apparent profit-taking.
MSTR	-6.49%	Reportedly linked to MSCI's pending non-operating-company index-eligibility review (announced 11 Nov, effective close 30 Nov) — MSCI's own review process requires names to fail screening across two annual periods before removal, and no finalized removal decision for this name could be confirmed; treat the tie as unconfirmed.
AVGO	+5.54%	No confirmed session-specific driver; verified via two independent price-history sources.
AMD	+5.86%	No confirmed session-specific driver; a link to chip-sector reaction to the NVDA leadership news is plausible but unsourced and not reported as fact.

NVIDIA's leadership change is the session's defining story. NVIDIA's board met the evening of Wednesday 11 November and accepted Huang's resignation; the change was announced Thursday 12 November.[1] The board's own release states no reason for the departure and discloses no severance terms, saying only that it expects "the company's operations, customer commitments and product roadmap to continue without interruption."[1] Press reporting, independently corroborated across multiple top-tier outlets, ties the resignation to Huang's disclosed extramarital relationships, including one with Alice Huang, a Megaspeed executive U.S. officials believe was linked to Chinese intelligence efforts, and a second with a subordinate executive; Huang reportedly apologized to staff in an internal memo.[2] This closes the governance thread this report has tracked since edition 60: the board's investigation (hired outside counsel Joon H. Kim/Wachtell Lipton, confirmed at edition 61) has now produced a leadership change rather than the continued-confidence outcome the board had stated as recently as 10 November. NVIDIA still reports Q3 FY2027 results as previously scheduled, Tuesday 17 November, after Thursday's market close.[1] No 8-K or other primary document yet addresses a permanent successor, severance, or the investigation's substantive findings — all remain open (Annex B).

Earnings after Thursday's close: Cisco's Q1 FY2027 (quarter ended 24 Oct) beat and raised cleanly — GAAP revenue $18.517bn (+24% y/y), GAAP diluted EPS $1.14 (+58% y/y), non-GAAP EPS $1.40 (+40% y/y), above its own prior guidance; FY2027 revenue guidance raised to $74.8-75.8bn (from $72.2-73.4bn) and non-GAAP EPS guidance raised to $5.47-5.53 (from $5.05-5.11) — confirmed via Cisco's own 8-K.[9] Its after-hours reaction was a muted -0.30% (single-sourced, one vendor snapshot), a further example of this report's standing finding that a clean beat-and-raise carries no guaranteed reaction. Options-implied volatility ahead of the print was approx. 8.78% (optionslam.com, clearly labeled "Weekly Implied Movement").[10] Nu Holdings' Q3 2026 (IFRS revenue $5,820.4m, +39.5% y/y; net income $1,091.6m vs. $782.7m a year earlier; reported ROE 32%, no forward guidance given) drew a +3.20% after-hours reaction, also single-sourced.[11] No analyst rating action tied to Thursday's session could be independently verified — a sixth consecutive edition with none confirmed.

3. Macro, policy and rates

Central bank	Policy rate	Last change	Next decision
Federal Reserve	3.75%-4.00%	Held, 28 Oct 2026 (10-2)	8-9 Dec 2026
Bank of Japan	approx. 1.25%	Held, 30 Oct 2026 (8-1)	17-18 Dec 2026
Bank of England	4.00%	Hiked 25bp, 5 Nov 2026 (8-1)	17 Dec 2026
European Central Bank	2.50% (depo)	Held, 28-29 Oct 2026	16-17 Dec 2026
Bank of Canada	2.50%	Hiked 25bp, 28 Oct 2026	9 Dec 2026
Reserve Bank of Australia	4.85%	Hiked 25bp, 3 Nov 2026 (6-3)	7-8 Dec 2026
Swiss National Bank	0.00%	Held, 24 Sept 2026	10 Dec 2026
Norges Bank	4.50%	Hiked 25bp, 24 Sept 2026	17 Dec 2026
Riksbank	2.00%	Hiked 25bp, 4 Nov 2026 (5-0)	approx. 16 Dec 2026
Banxico	6.25%	Cut 25bp, 5 Nov 2026 (3-2)	unavailable – see Annex B

No contradiction surfaced this edition for any of the nine non-Fed rows above; all carry forward as settled pending each bank's own next decision. December FOMC odds firmed again: a fresh Polymarket Gamma API pull (updated 2026-11-13T01:26 UTC, approx. 8:26pm ET 12 Nov) priced a 25bp December hike at approx. 88.5% and 50bp+ at approx. 9.65%.[5] Kalshi's official trading API (api.elections.kalshi.com, distinct from its often-blocked web front end) returned a usable strike ladder for the first time in 26 straight editions, implying approx. 85% for a 25bp hike and approx. 10-12% for 50bp+ — broadly consistent with Polymarket.[5] CME FedWatch failed again (connection failure) and DeFi Rate's aggregator could not be freshly refreshed (stale late-October snapshot only); both are flagged in Annex A rather than cited. The firming odds track a sharp Treasury sell-off on the first print since the Veterans Day closure: the 2-year rose 13bp to 4.86%, the 10-year 12bp to 5.10%, the 30-year 8bp to 5.43% (home.treasury.gov's official par-yield TextView).[12] No federal shutdown is in effect; H.R. 6500 continues to fund agencies through 11 December 2026, with no contradiction found on a fresh whitehouse.gov check.[13] On trade policy, a distinct USTR Federal Register filing (Doc. 2026-22867, public inspection 9 Nov, published 10 Nov) further suspends a separate Section 301 maritime/shipbuilding action through 9-10 January 2027 — this is a narrower port-fee/crane-duty action, not the broader 10%-rate "reciprocal tariff" truce with China.[14] That broader truce's reported extension to 10 January 2027 (per Treasury Secretary Bessent's 23 September announcement) remains secondary-sourced only after a third Federal Register sweep found no primary document, and its originally-reported 10 November 2026 expiry date has now passed without a located primary confirmation of renewal — see Annex B.

4. Commodities and FX

Instrument	Level	Chg	Note

WTI crude (Dec)	$88.72	+2.53%	Investing.com; Wed base revised to $86.53 on both vendors[15]
Brent crude (Jan)	$95.82	+3.30%	Investing.com[15]
Henry Hub nat gas (NGZ6)	$3.359	+4.48%	Cross-vendor gap closed (Investing.com/Yahoo both $3.215 Wed base)[16]
Gold futures	$3,884.67	-2.90%	Investing.com; Wed base revised to $4,000.50 (Yahoo agrees)[17]
Silver futures	$50.040	-3.77%	Investing.com; Wed base revised to $52.002[17]
Copper (LME cash)	$13,712.00/t	-1.18%	westmetall.com[18]
Copper (LME 3-month)	$13,655.00/t	n/a	Current-day print only (no historical series exists)[18]
DXY	103.094	+0.27%	Investing.com; Yahoo 103.168 (approx. 7bp gap)[19]
EUR/USD	1.1054	-0.32%	Investing.com[19]
GBP/USD	1.3230	-0.39%	Investing.com[19]
USD/JPY	159.86	+0.05%	Investing.com[19]
2-yr Treasury	4.86%	+13bp	home.treasury.gov, first print since Veterans Day[12]
10-yr Treasury	5.10%	+12bp	home.treasury.gov[12]
30-yr Treasury	5.43%	+8bp	home.treasury.gov[12]

Oil rallied on no single identified catalyst within this research pass's scope; both WTI and Brent's Wednesday base prices were revised higher across vendors versus what edition 62 published ($86.23/$85.83 to $86.53 for WTI), a further instance of this report's recurring vendor-retroactive-revision pattern. Henry Hub's two-edition cross-vendor gap closed, but via a joint downward revision of Wednesday's base on both vendors (not organic convergence) — continue the every-edition two-source discipline. Gold and silver both fell as Treasury yields rose; their Wednesday bases were also revised higher on both vendors versus edition 62's published figures. Kitco's historical-close pages remain inaccessible for a fifth straight edition (Annex A). Copper's LME cash series reconciled cleanly against a COMEX-converted cross-check (approx. $13,726/t). DXY's cross-vendor gap (approx. 7bp) sits within its recently recurring range.

5. Derivatives, volatility and positioning

The VIX complex jumped sharply on the NVDA-led risk-off, confirmed fresh via CBOE's own delayed-quotes feed (last_trade_time 16:15:01 ET for VIX/VIX9D/VIX3M/VIX6M/VVIX, 17:00:18 ET for SKEW): VIX +6.92% to 18.70, VIX9D +9.16% to 17.51, VIX3M +4.26% to 20.06, VIX6M +2.99% to 21.71, VVIX +6.90% to 96.71, SKEW +0.72% to 150.16.[8] Both of the feed's previously recurring bugs (a duplicated prior-close field; a change-percent that divides by the wrong price) were absent today — the feed's own percentage changes matched hand-computed figures exactly across all six series, continuing an unpredictable multi-edition toggle. The term structure flattened at the front: VIX9D (17.51) now sits below spot VIX (18.70), with VIX3M (20.06) and VIX6M (21.71) still in ascending contango further out — consistent with a sharp, company-specific shock expected to fade faster than a broad macro repricing would imply. Dealer-gamma sources remain fully unusable (zerogex.io and SpotGamma both continue multi-edition placeholder/stale states). The CFTC confirmed directly that no new Commitment of Traders report fell inside this window; the next report, covering 10 November data, is due Monday 16 November 2026. Fed funding rates were re-checked against federalreserve.gov with no change found: IORB 3.90%, ON RRP 3.75%, primary credit 4.00%, standing repo facility 4.00%, all unchanged since 29 October 2026. No options-expiration or other structural positioning event fell on Thursday 12 November; standard November OPEX is 20 November.

6. The day ahead

Date	Event	Consensus / context
Fri 13 Nov 2026, 8:30am ET	October US PPI (final demand)	No reliably attributed consensus figure found; prior month (Sept) printed +1.3% m/m / +6.3% y/y
Mon 16 Nov 2026	CFTC Commitment of Traders (covering 10 Nov data) and Q3 2026 13F filing deadline	Both fall the same day; no estimate ahead of release
Tue 17 Nov 2026, approx. 4:20pm ET	NVIDIA Q3 FY2027 results	Reporting as previously scheduled, unaffected by the CEO transition per the company's own 8-K
8-9 Dec 2026	FOMC meeting (SEP meeting)	Markets price approx. 85-88.5% odds of a 25bp hike as of 12 Nov

Sector setup we take into Friday's session

- Technology (XLK) heads into Friday having outperformed the broad tape despite NVDA's drag, with AMD and Broadcom both rallying — watch whether the chip complex treats the NVIDIA leadership change as a one-name event or broadens into renewed AI-capex-sentiment risk, a pattern this report has seen swing both ways in recent weeks.
- Energy (XLE) was the lone sector gainer on a sizable oil rally (WTI +2.53%, Brent +3.30%) with no confirmed single catalyst identified — worth a fresh look at Friday's open for whether the move extends or fades.
- Small-caps (Russell 2000, -1.66%) underperformed by a wide margin; a narrow, mega-cap-news-driven session like Thursday's tends to hit the Russell disproportionately, and is worth watching for either a snapback or a confirmation of broader risk-aversion on Friday.
- October PPI lands Friday morning with no attributed consensus found — after two straight hot inflation prints (CPI, prior PPI), a third would further test December's already-firm hike odds.

Annex A — Assumptions, corrections and status

- No correction box this edition — no figure published in a prior edition was found to be wrong. The NVIDIA leadership change is a new development, not a contradiction of edition 61/62's reporting that the board then retained confidence in Huang.
- Index closes: AP's apnews.com and the WTOP mirror were not directly re-attempted this edition (went straight to the known-good lanacion.com.ar mirror); AP and Yahoo Finance agreed exactly on all four indices, satisfying the two-source standard.
- Sector table: a secondary MarketWatch/WSJ cross-check failed again (fetch blocked) — a fourth consecutive edition single-sourced to Stockanalysis.com.
- No session-specific driver could be confirmed for Energy's sector outperformance or Materials' underperformance; reported as verified moves without a causal claim.
- GPN (-12.01%), SMCI (-11.30%) and AMD's/AVGO's rallies (+5.86%/+5.54%) are reported as verified price moves with no independently confirmed driver.
- YETI's -10.49% move is verified; a circulating "guidance cut" driver claim could not be confirmed as dated to this session and is excluded.
- MSTR's reported tie to MSCI's index-eligibility review is disclosed as unconfirmed — MSCI's own review requires multi-period screening failures before removal, and no finalized decision was located.
- Corteva's price move and guidance cut are primary-confirmed via its own 8-K; a separately claimed MSCI-deletion driver for Corteva specifically could not be confirmed and is excluded.
- Cisco's and Nu Holdings' after-hours reactions (-0.30% and +3.20% respectively) are each single-sourced to one vendor snapshot; no second after-hours quote could be obtained for either.
- Broadcom's +5.54% close was cross-checked against two independent price-history sources and agreed exactly.
- NVIDIA's 8-K discloses no reason for Huang's resignation and no severance terms; the connection to Huang's disclosed relationships and the board's investigation rests on press reporting, independently corroborated across multiple top-tier outlets, not on the primary filing itself.
- Oil, gold, silver and Henry Hub Wednesday base prices were all found revised versus what edition 62 published, a continuation of this report's recurring vendor-retroactive-revision pattern; Thursday's % changes above are computed against each vendor's currently-displayed Wednesday base.
- Henry Hub's two-edition cross-vendor gap closed via a joint downward revision of Wednesday's base on both vendors, not organic same-day convergence.
- Yahoo Finance's commodity and FX closes were still showing as live/unsettled intraday quotes at the approx. 20:15-20:25 ET research snapshot for WTI, Brent, Henry Hub, gold, silver and DXY; Investing.com's figures are treated as the closing values of record this edition.
- Kitco's historical gold/silver close pages remain inaccessible (live-quote page only, blank historical widget) for a fifth straight edition.
- DXY's cross-vendor gap (Yahoo vs. Investing.com) ran approx. 9bp on Wednesday's base before narrowing to approx. 7bp Thursday, within its recently recurring range.
- CME FedWatch failed again (connection failure); DeFi Rate's blended aggregator could not be freshly refreshed within this research pass (a stale late-October snapshot was the only one found) — neither figure is cited.
- Kalshi's official trading API (api.elections.kalshi.com) returned usable, live market data for the first time in 26 consecutive editions, ending that failure streak; its web front end (kalshi.com) remained rate-limited (HTTP 429).
- Government shutdown status: whitehouse.gov's homepage made no shutdown-related statement either way; treated as a clean negative confirmation (no contradiction), not a fresh positive restatement of the 11 December deadline itself.
- A distinct, narrower USTR Federal Register filing (Doc. 2026-22867) suspending a Section 301 maritime/shipbuilding action to 9-10 January 2027 was newly found this edition; it is explicitly not the same action as the broader reciprocal-tariff truce discussed in Annex B.
- VIX complex bug check: both previously recurring feed bugs (duplicated prior-close field; mis-divided change percent) were absent this edition; continue the manual-computation discipline regardless.
- Options-flow sources: zerogex.io and SpotGamma remain fully unusable; optionslam.com's "Weekly Implied Movement" figures for AMAT, CSCO and NBIS were clearly labeled and used (CSCO only, as relevant to this edition's earnings); its other sections remain unlabeled or show placeholder values and were not used.

Annex B — Data points sought but not verified this edition

- Banxico's next policy-decision date: its public calendar URL redirects to a dead page; its decision-archive page lists only past decisions. Unresolved for a second straight edition.
- A primary USTR/White House/Federal Register document confirming the reported reciprocal-tariff-truce extension to 10 January 2027 (Bessent, 23 Sept): still not found after a third dedicated search; its originally-reported 10 November 2026 expiry has now passed with no primary renewal document located.
- A reliably attributed consensus forecast for Friday's October PPI release.
- A confirmed, dated Friday 13 November Fed-speaker calendar.
- Specific earnings reports confirmed to land on Friday 13 November itself (secondary "week ahead" previews list names but none with a reliable Friday-specific date).
- A session-specific driver for GPN's, SMCI's, AMD's or AVGO's moves.
- Confirmation of whether YETI issued a guidance cut this specific session.
- A finalized MSCI decision on MSTR's index eligibility.
- NVIDIA's permanent-CEO search outcome, any severance disclosure, and the board investigation's substantive findings — all remain open pending a future 8-K or statement.
- A second independent after-hours quote for both Cisco and Nu Holdings.
- Midterm-election state certification: no new state-deadline developments found this window; the structure (no single national step, deadlines into December) is unchanged from edition 62.
