Daily Economic Briefing

Thursday 29 October 2026 | Window: Tue 27 Oct 2026 20:00 ET – Wed 28 Oct 2026 20:21 ET (Wed 28 Oct close/AH, including the FOMC decision) | Research cutoff 28 Oct 2026, 20:21 ET | Edition 52

60-second read

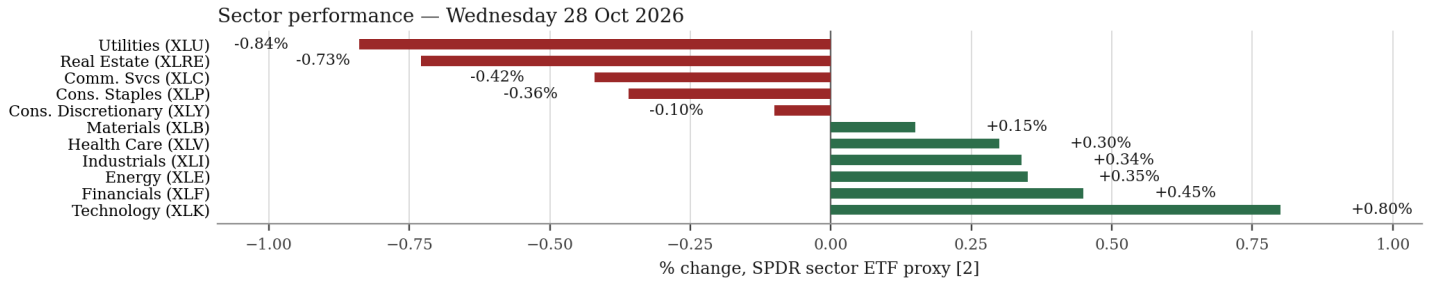

1. The FOMC held the federal funds target range at 3.75%–4.00% as priced, but the 10–2 vote carried a hawkish surprise: Governors Lisa Cook and Beth Hammack both dissented in favor of a 25bp hike[1]. December 8–9 odds snapped from a near-even read pre-meeting to approx. 80% hike on the same blended aggregator, with the site's own meeting-path table still internally inconsistent for a sixth straight edition[2].
2. The Bank of Canada delivered a genuine surprise the same morning — a 25bp hike to 2.50%, not the hold the going-in rate implied — citing inflation running hotter and more persistent than its July projections[3].
3. Megacap earnings split sharply: Microsoft's Azure revenue disclosed in dollars for the first time ($33.2bn, +48% y/y) drove shares higher after hours, while Alphabet's GAAP EPS fell to $2.12 from $2.87 on an $8.7bn mark-to-market loss on its SpaceX/Anthropic equity stakes — even as revenue and cloud growth both beat — and the stock fell as much as 10% after hours[4][5].
4. Equities notched a fourth straight session of gains on very narrow leadership: S&P 500 +0.28%, Nasdaq Composite +0.27%, but only 6 of 11 sectors closed higher. Technology (+0.80%) led on a chip rally (SK Hynix's blowout quarter) and Oracle's investor-day guidance; Utilities and Real Estate lagged as the 10-year yield pushed to approx. 5.05% on the hawkish dissent[6][8].
5. Fortinet beat on revenue and EPS and raised full-year guidance for the third time this year — and still fell 5.9% in the regular session, extending further after hours on investor concern over decelerating core growth: another instance of this report's standing "a beat does not guarantee a positive reaction" pattern[7].

1. Market recap

S&P 500	Dow Jones	Nasdaq Comp.	Nasdaq-100 (proxy)	Russell 2000 (proxy)	VIX
7,744.2	**52,477**	**26,549.85**	**QQQ +0.60%**	**IWM +0.40%**	**16.91**
+0.28%	+0.19%	+0.27%	+0.60%	+0.40%	-3.48%

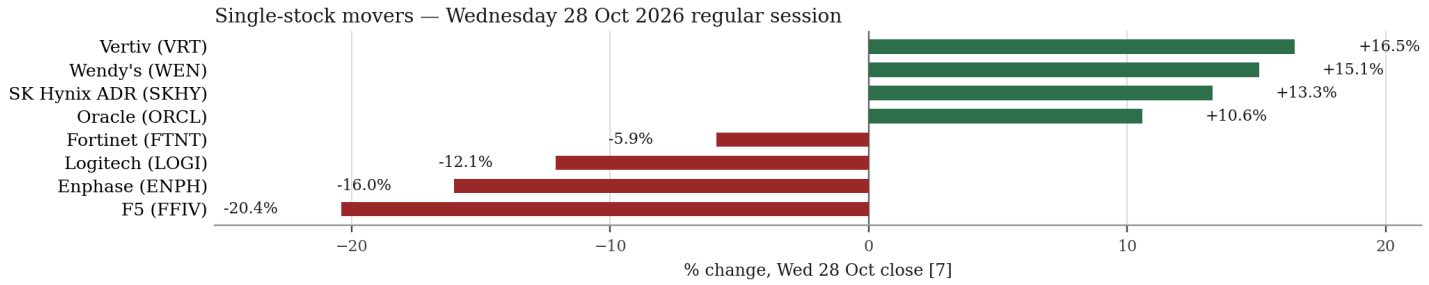

A fourth straight up session, but a narrow one: the S&P 500 closed approx. 7,744 (+0.28%), the Dow +0.19% to approx. 52,477, and the Nasdaq Composite +0.27% to 26,549.85 — all computed from Tuesday's logged closes plus the day's reported percentage change, since AP's and Reuters' own wires were not indexed/fetchable again by cutoff (a now-recurring gap this report flags every time it recurs); two independently-sourced secondary outlets citing the same CNBC/Yahoo Finance figures agreed to the rounding shown[6]. The Nasdaq-100 and Russell 2000 again have no directly-sourced index print; QQQ (+0.60%) and IWM (+0.40%) are used as disclosed proxies[9]. Only 6 of 11 SPDR sectors closed higher — a narrower breadth than the headline gain suggests, consistent with the AP wire's own characterization (per the secondary citations) that most individual S&P constituents actually fell. VIX fell 3.48% to 16.91 as the decision cleared without surprise on the equity side.

Sector performance

Technology (XLK, +0.80%) led for a second straight session, on SK Hynix's blowout quarter (Korea's largest chipmaker; see Section 2) and Oracle's investor-day guidance lifting sentiment across the semiconductor/AI-infrastructure complex. Financials (+0.45%) and Energy (+0.35%) followed. Utilities (XLU, -0.84%) and Real Estate (XLRE, -0.73%) were the clear laggards, both classic rate-sensitive sectors pressured as the hawkish FOMC dissent pushed the 10-year Treasury yield to approx. 5.05% (+6bp) and the 30-year to approx. 5.37% (+7bp)[8]. Communication Services (-0.42%) likely reflects some pre-positioning ahead of Alphabet's after-hours report, a top XLC weight, though the bulk of that stock's decline landed after the sector ETF's 4pm settlement and is not reflected in the chart.

2. Equities and earnings

Ticker	Regular session	After-hours	Driver
Microsoft (MSFT)	-0.06% to $531.01	approx. +2.9% to $546 (as of approx. 8pm ET; an earlier intraday AH spike	Fiscal Q1 2027 (qtr ended 30 Sept): revenue $92.3bn (+19% y/y), GAAP diluted EPS $4.92 (+32% y/y); Azure revenue disclosed in dollars for the first time at $33.165bn (+48% y/y); Microsoft Cloud $63.9bn

		toward +4.9%/$568 faded)	(+30%). Confirmed directly against the company's SEC 8-K Exhibit 99.1[4].
Alphabet (GOOGL)	+1.34% to $324.89	approx. -7% to -10% depending on timestamp; latest read -9.97% to $292.50 (approx. 8pm ET)	Q3 2026: revenue $127.6bn (+25%), Google Cloud $30.7bn (+103%), YouTube ads $11.2bn (+9%) — all beats — but GAAP diluted EPS fell to $2.12 from $2.87 a year ago on an $8.7bn mark-to-market loss on equity stakes (SpaceX, Anthropic), not an operating miss; free cash flow was negative $9.065bn, a second straight negative quarter. Confirmed directly against the company's SEC 8-K Exhibit 99.1[5].
Fortinet (FTNT)	-5.90% to $174.08	further decline reported, approx. -25% to -26% by two secondary outlets (not independently re-verified beyond the regular close)	Q3 2026: revenue $2.078bn (+20% y/y), non-GAAP EPS $0.91 (beat), GAAP EPS $0.86; raised FY2026 revenue and billings guidance for the third time this year. Confirmed directly against the company's SEC 8-K Exhibit 99.1[7]. Reaction reportedly tied to a core-growth deceleration concern in a services sub-segment, not the headline beat-and-raise.
Carvana (CVNA)	-0.30% to $59.05	approx. +8.4% to +9.6% (two sources diverge)	Q3 2026: revenue $8.04bn (+42.4%), net income $483m (vs. $263m a year ago), diluted EPS $0.39 (vs. $0.21), record adjusted EBITDA $800m. A clear beat on every primary-filing metric; one secondary headline describing the quarter as "earnings come in short" is contradicted by the company's own 8-K and should be disregarded[10].
F5 (FFIV)	-20.4%	—	Guided FY2027 revenue growth to 8%-9%, down from a prior 11% framing[11].
Enphase Energy (ENPH)	-16.0% to $24.99	—	Q3 revenue $293.3m vs. $305.2m consensus and adj. EPS $0.41 vs. $0.50 consensus, both misses; Q4 guide $225-255m vs. $300.5m consensus. Cited weak US residential solar demand, higher rates and the Section 25D tax-credit expiration[11].
Vertiv (VRT)	+16.5% to $242.94	-2.8% to $236.10	Q3 net sales $4.31bn (+61% y/y) well above approx. $3.76bn consensus; adj. EPS $2.21 vs. $1.82 consensus; raised full-year guidance across all key metrics[11].
Oracle (ORCL)	+10.6% to $144.34	—	Not an earnings report — investor-day outlook projecting FY2029 free cash flow of +$30bn (vs. a prior expectation of negative FCF), >10GW of data-center capacity by end-FY2028, and a reiterated FY2030 revenue target of $225bn[11].
SK Hynix ADR (SKHY)	+13.3% to $164.70	—	Q3 revenue 104.62tn won (+32% q/q); operating profit 83.33tn won (+38% q/q, 79.7% margin) — both beat consensus by approx. 7-9% per JPMorgan, on DRAM prices up approx. 30% and NAND up approx. 25% q/q[11].
Wendy's (WEN)	+15.1% to $7.07	—	Confirmed non-binding $7.35/share cash take-private proposal from Trian Fund Management and partners, per a Schedule 13D/A; closed approx. 3.8% below the offer price[12].
Sprouts Farmers Market (SFM)	-3.7% to $62.00	-23.0% to $47.75	Q3 EPS $1.21 vs. $1.23 consensus and revenue $2.3bn vs. $2.33bn consensus, both misses; comp sales -0.9%; cut FY2026 EPS guide to $4.80 and guided Q4 comps to -2% to -4%, citing a cyclospora-linked disruption[11].

Boeing, JetBlue, UPS and other names from Tuesday's earnings slate were already carried in the prior edition. Wednesday's reporting calendar was dominated by two megacaps whose headline reactions diverged from their underlying quality in opposite directions — Microsoft's clean, broad-based beat (its first-ever dollar disclosure of Azure revenue removes a long-standing analyst estimation exercise) against Alphabet's cosmetic GAAP miss, a reminder that a reported EPS "miss" against consensus can reflect a one-time non-operating mark rather than operating weakness; Annex A records that distinction so it isn't lost if only the headline number circulates. Smaller notable moves not independently re-verified beyond a single secondary source: LCI Industries +8.4% (a non-binding $101/share Monomoy offer), Boston Scientific -11.0% (a soft Q4 sales guide), Logitech -12.1% (a $70-80m supplier-plant-incident hit to its holiday-quarter guide), and Rapport Therapeutics -18.3% (a share offering priced below its prior close). No dated, named-firm analyst upgrade or downgrade with an explicit price target could be confirmed for Wednesday's session despite a dedicated search; see Annex B.

3. Macro, policy and rates

Central bank	Policy rate	Last change	Next decision
Federal Reserve	3.75%-4.00%	Held 28 Oct 2026, 10-2 (Cook, Hammack dissented for +25bp); prior move +25bp 16 Sept 2026	8-9 Dec 2026 (SEP meeting)
Bank of Canada	2.50%	+25bp, 28 Oct 2026	9 Dec 2026
European Central Bank	2.50% (deposit)	Unchanged since 16 Sept 2026	29 Oct 2026 — meeting concludes after this window's cutoff; decision not yet known
Bank of Japan	1.25%	+25bp, 18 Sept 2026 (eff. 24 Sept)	29-30 Oct 2026 — meeting falls after this window's cutoff; decision not yet known
Bank of England	3.75%	Held 17 Sept 2026, 6-3 vote	5 Nov 2026 (directly reconfirmed, bankofengland.co.uk)[13]
Swiss National Bank	0%	Held 24 Sept 2026	10 Dec 2026
Norges Bank	4.50%	+25bp, 24 Sept 2026	17 Dec 2026
Riksbank	1.75%	-25bp Oct 2025; most recently reconfirmed held 30 Sept 2026	not re-confirmed this edition — secondary sources gave conflicting dates
Reserve Bank of Australia	4.60%	+25bp, 29 Sept 2026 (eff. 30 Sept)	2-3 Nov 2026 (secondary-sourced only this edition)[14]
Banxico	6.50%	Held 24 Sept 2026	unavailable — standing gap, not found again this edition

The Fed held as priced but dissented hawkish. The FOMC kept the target range at 3.75%-4.00%, a 10-2 vote with Governor Lisa Cook and Cleveland Fed President Beth Hammack both preferring a 25bp hike — confirmed directly against the Fed's own statement[1]. The statement described activity as "expanding at a strong pace" with inflation "elevated," and reiterated that further moves depend on incoming data. A companion implementation note set the IORB at 3.90% (effective 29 Oct) and the ON RRP rate at 3.75%[1]. Kevin Warsh's press-conference remarks could not be independently verified from a primary or reliable source by cutoff; see Annex B. December 8-9 odds on DeFi Rate's blended Kalshi/Polymarket aggregator moved to approx. 80% hike / 19% hold, a sharp shift from the pre-decision framing, though the same page's own meeting-path table does not sum cleanly to 100% — an internal inconsistency this report has now logged for six straight editions[2]. Kalshi's direct feed failed for a 15th straight edition and CME FedWatch for an 11th; Polymarket's own site showed only an expired prior-year contract.

The Bank of Canada's hike was the bigger surprise of the two. Governing Council raised the overnight rate target 25bp to 2.50% (Bank Rate 2.75%, deposit rate 2.45%), citing inflation running near 3% since April and seen reaching approx. 3.5% by year-end, with the Middle East conflict cited as an ongoing upside risk to energy prices; growth was described as picking up more than expected. Guidance left the door open to a further increase, "proceeding carefully." Next decision 9 Dec 2026[3]. The ECB's Governing Council meeting concludes Thursday 29 Oct with the press conference that afternoon in Frankfurt — after this window's cutoff, confirmed directly against the ECB's own calendar[24] — so the 2.50% deposit rate carries forward as the going-in level, not yet re-confirmed for this specific meeting. The Bank of Japan's 29-30 Oct meeting similarly falls after cutoff; its schedule was confirmed directly against boj.or.jp[25], with the 1.25% rate carried forward as the going-in level. Q3 GDP and September PCE inflation are both BEA-scheduled for Thursday 29 Oct, 8:30am ET, and had not printed early as of this window's cutoff, confirmed directly against bea.gov[15]. No change in US federal funding status (through 11 Dec 2026, H.R. 6500) and no new tariff/trade filing was found; federalregister.gov's search interface remains blocked, redirecting to an apparent rate-limit gate.

4. Commodities and FX

Instrument	Level	Chg (Tue→Wed)	Note
WTI crude	$101.86	+1.96%	No dated catalyst found specific to Wednesday; not tied to the FOMC decision in any sourced reporting[16]
Brent crude	$110.72	+1.20%	Tuesday base ($109.41) matches the prior edition exactly[16]
Henry Hub nat. gas (NGZ6, Dec)	$3.015	+0.37%	OHLC internally consistent; a $3.004 vs. $3.065 gap vs. the prior edition's logged Tuesday base remains unreconciled, larger than typical vendor noise[16]
Gold (futures)	$4,066.67	-0.20%	Kitco spot $4,041-4,043 (-0.6% intraday), a normal small futures premium[17]
Silver (futures)	$53.963	-1.01%	Kitco spot $53.58-53.83, normal basis[17]
Copper (LME cash)	$14,675.50/t	+0.35%	westmetall.com; Tuesday base matches the prior edition exactly[18]
DXY (Dec'26 futures proxy)	102.031	-0.13%	True ICE spot series unobtainable again; UUP ETF corroborates direction (-0.21%)[19]
EUR/USD	1.1155	+0.28%	
GBP/USD	1.3327	+0.16%	Matches vendor's own displayed change; Tuesday base matches prior edition exactly
USD/JPY	157.84	-0.07%	DXY and USD/JPY both softer — directional agreement extends to a third straight session[19]
2-year Treasury	4.67%	-3bp	home.treasury.gov official par yields[20]
10-year Treasury	5.05%	+6bp	Curve bear-steepened on the hawkish dissent
30-year Treasury	5.37%	+7bp	2s30s spread widened approx. 10bp on the session

Oil extended its rebound (WTI +1.96%, Brent +1.20%) with no sourced catalyst tying the move to the Fed decision; OPEC+ already held November output unchanged at its 4 Oct meeting, with its next meeting not until 1 Nov. The Treasury curve was the cleanest read on the day's hawkish surprise, bear-steepening as the 10- and 30-year both backed up 6-7bp while the 2-year eased slightly on the still-dovish-relative-to-expectations headline hold. Henry Hub's Tuesday base shows an approx. 2% gap against this report's own previously-published figure — flagged rather than silently reconciled; see Annex A. The standing three-way Brent dispute for Friday 23 Oct ($111.70-$116.72, a third candidate at $113.17) remains unresolved and is not restated in full here; see the prior edition.

5. Derivatives, volatility and positioning

Vol priced the FOMC decision as a non-event and then confirmed that read after the fact. VIX fell 3.48% to 16.91, with the front end leading the decline — VIX9D fell 6.31% to 15.60, nearly twice the 30-day tenor's pace — and VVIX fell 2.86% to 96.61. The term structure stayed in clean contango through the decision (VIX9D 15.60 < VIX 16.91 < VIX3M 19.22 < VIX6M 21.24) with no front-end kink, meaning the market was not pricing meaningful event risk into the meeting in the first place; the post-decision move reads as ordinary vol crush, not a dislocation, so no third chart is used this edition[21]. No notable single-stock options-flow or skew story tied to Wednesday's movers or FOMC positioning could be found despite a targeted search — a reliably low-yield search in most editions. Dealer gamma remained fully unusable from both standing sources: zerogex.io loaded but every metric tile showed placeholder dashes (an 11th straight failure of this kind), and SpotGamma's dashboard remains a login-gated client-side app with no server-rendered data (a 6th straight failure). CFTC CoT: confirmed directly against cftc.gov's own release schedule that nothing new has posted since the Tuesday-20-October report[22]; the next report (covering Tuesday 27 Oct) is due Friday 30 Oct, 3:30pm ET, after this window's cutoff, as expected. Funding: SOFR drifted up from 3.88% to 3.95% over the week into Tuesday (the latest available print; FOMC-day funding data posts the next business day, outside this window), with the SOFR-EFFR spread widening to +7bp — a month-end repo-tightness signal that predates the decision rather than responding to it[23].

6. The day ahead

Date	Event	Consensus / context
Thu 29 Oct, approx. 13:45-14:15 CET (approx. 8:45am ET)	ECB rate decision & press conference	Going in at 2.50% deposit facility; no clean consensus found, a 29 Oct meeting-day text remains secondary-sourced only
Thu 29 Oct, 8:30am ET	Q3 2026 US GDP, advance estimate	No clean bank/wire consensus sourced this edition; flagged rather than estimated
Thu 29 Oct, 8:30am ET	September 2026 PCE / core PCE inflation	No clean, dated consensus found; do not treat any prior-month figure circulating as this month's print
Thu/Fri 29-30 Oct	Bank of Japan policy decision	Going in at 1.25%; a 31-year-high rate set in September, meeting outcome not yet known
Fri 30 Oct, 3:30pm ET	CFTC Commitments of Traders report	Covers Tuesday 27 Oct positioning data; first fresh print since 20 Oct
approx. Sat 31 Oct	China October manufacturing PMI	Date is secondary-sourced only; try stats.gov.cn directly
approx. 30 Oct	Chevron, Exxon Mobil, AbbVie, Newell Brands earnings	Confirmed via SEC EDGAR not yet reported as of this window[26]; do not treat any "already reported" aggregator claim as reliable

Sector setup we take into Thursday's session

- Technology goes in with a second straight leadership session behind it, but with Alphabet's after-hours decline a live overhang on Communication Services, a sector that already lagged Wednesday.

- Rate-sensitive sectors (Utilities, Real Estate) enter Thursday already pressured by the hawkish dissent and a steeper long end; a confirmatory or contradictory signal from Thursday's GDP/PCE prints is the next catalyst for that trade.
- Energy's modest Wednesday gain (+0.35%) sits against a well-supplied OPEC+ backdrop; no fresh catalyst is scheduled before the 1 Nov OPEC+ meeting.

Annex A — Assumptions, corrections and status

- No correction box this edition — no figure published in a prior edition was found to be wrong on checking.
- Index closes (S&P, Dow, Nasdaq Composite) are computed from this report's own logged Tuesday 27 Oct closes plus a secondary-sourced Wednesday percentage change (two independent outlets citing CNBC/Yahoo Finance figures); AP's and Reuters' own wires were not indexed/fetchable by cutoff, a recurring but not yet permanent gap.
- Nasdaq-100 and Russell 2000 remain ETF-proxy-derived only (QQQ, IWM); no direct index print has been found in several editions.
- Alphabet's GAAP EPS decline to $2.12 (from $2.87 a year ago) is driven by an $8.7bn mark-to-market loss on equity investments (SpaceX, Anthropic stakes), not an operating shortfall; revenue, Google Cloud and YouTube ad revenue all beat. Confirmed directly against the company's own SEC 8-K exhibit.
- Carvana's quarter was confirmed, via the company's own 8-K, as a clean beat on revenue, net income, EPS and adjusted EBITDA; a secondary headline describing it as a miss is contradicted by the primary filing and should not be repeated.
- Fortinet, Microsoft, Alphabet and Carvana's headline financial figures were each cross-checked directly against the company's own SEC EDGAR 8-K/exhibit filing dated 28 Oct 2026, not taken from secondary aggregators.
- Henry Hub's Tuesday 27 Oct baseline shows an approx. 2% gap between this edition's direct re-fetch ($3.004) and the prior edition's published figure ($3.065) — larger than the typical sub-1% vendor noise seen elsewhere this edition (WTI, gold, silver, copper, GBP/USD and Brent's Tuesday base all reconciled cleanly). Not resolved; flagged rather than silently picked.
- DXY is sourced from investing.com's Dec'26 futures contract, not a true ICE spot series, which remained unobtainable this edition; UUP ETF used as a directional cross-check only.
- The FOMC's 10-2 vote and the Cook/Hammack dissent were confirmed directly against the Federal Reserve's own press release text, not a secondary paraphrase.
- The Bank of Canada's 25bp hike to 2.50% was confirmed directly against bankofcanada.ca's own press release and key-rate history table.
- Riksbank and RBA next-decision dates were not independently re-confirmed this edition; the RBA's 2-3 Nov date and Riksbank's rate level are secondary-sourced only this time. Current levels (Riksbank 1.75%, RBA 4.60%) were not contradicted by any search.
- Movers-chart and sector-chart pad_frac set at 0.24 and 0.30 respectively per the standing guidance for double-digit-percent outliers and an 11-category panel; no capping needed (largest-to-second-largest ratio approx. 1.2x on the movers chart, well under the 5x threshold).
- No third chart used this edition — the derivatives research found the FOMC day's vol reaction to be an ordinary crush/contango continuation rather than a genuine dislocation, and no fresh CFTC data was due inside this window.

Annex B — Data points sought but not verified this edition

- Fed Chair Kevin Warsh's actual press-conference remarks on 28 Oct 2026 — no primary transcript or reliable secondary quote could be confirmed by cutoff.
- The immediate intraday equity/Treasury/dollar market reaction specifically to the 2:30pm ET press conference (as distinct from the 2:00pm statement) could not be isolated from a reliable source.
- BoC Governor Tiff Macklem's live press-conference remarks from the same day — only the written Monetary Policy Report rationale was confirmed.
- The ECB's own direct confirmation of the Governing Council's exact meeting-day text for 28 Oct remains secondary-sourced; its own press-release calendar page 404'd on direct fetch.
- A clean, dated bank or wire-survey consensus figure for Thursday's Q3 GDP advance estimate and September PCE/core PCE — only stale or ambiguous secondary figures were found.
- Any dated, named-firm analyst upgrade/downgrade with an explicit price target specifically for Wednesday 28 Oct, despite a dedicated search.
- Fortinet's precise after-hours percentage decline — two secondary outlets gave approx. -25% and -26% readings at different timestamps; neither independently re-verified against a primary print.
- Drivers for several smaller after-hours/regular-session movers reported by a single secondary aggregator with no located company release or SEC filing (not detailed in the main text to avoid repeating an unconfirmed claim).
- A current live Polymarket December 2026 Fed-odds market — the page surfaced only a resolved December 2025 contract.
- Kalshi and CME FedWatch direct feeds — both failed again as expected (15th and 11th consecutive failures respectively).
- Riksbank's and the RBA's next policy-decision dates, independent of this edition's secondary sourcing.
- Banxico's next policy decision date — a standing gap, not found again this edition.
- China's October PMI release date beyond a secondary calendar aggregator's approx. 31 Oct estimate.

Method: every figure traces to a named source in Annex C; where sources disagreed, the better-corroborated figure was used and the conflict disclosed. Nothing estimated or filled from memory — unverifiable items are listed in Annex B. Not investment advice.
