Daily Economic Briefing

Monday 2 November 2026 | Window: Thu 29 Oct 2026 20:00 ET – Sun 1 Nov 2026 20:21 ET (Fri 30 Oct close/AH, the window's one NYSE session; Sat–Sun no equity trading) | Research cutoff Sun 1 Nov 2026 20:21 ET | Edition 54

60-second read

1. **A tech-led selloff dropped the S&P 500 1.82% to 7,580.07 and the Nasdaq Composite 2.86% to 25,437.00** (Nasdaq-100 reportedly dipped into correction territory intraday) — the worst session since June 2026. Intel fell **28.58% to $65.76, its worst day since 1974**, on a Q4 profit guide below Street despite beating on Q3 revenue and EPS; Nvidia (-4.22%) was the single largest index-point drag.[3][4]
2. **A record crypto heist roiled crypto-adjacent equities**: approx. $6.3bn was stolen from Binance overnight Thu–Fri (the largest exchange hack on record, reportedly tied to North Korea's "TraderTraitor" group per blockchain-analytics firms, not an official government attribution); Bitcoin fell below $77,000, Coinbase fell 10.62% and Strategy (MicroStrategy) fell 7.84% (also citing a CFO resignation).[5][6][7]
3. **Volatility repriced sharply but stayed orderly**: VIX jumped 12.91% to 19.42 and VIX9D 21.30% to 19.25 — the complex's largest one-day jump logged in months — yet the term structure held clean contango throughout (VIX9D < VIX < VIX3M < VIX6M), arguing against a structural stress signal.[39]
4. **Two long-running Asia macro threads resolved the same session.** The Bank of Japan held its policy rate at approx. 1.25% on an 8-1 vote (dissenter Takata Hajime wanted a hike to 1.5%) — closing the live question edition 53 carried forward. China's October PMI slipped back below 50 on both gauges (manufacturing 49.3, non-manufacturing 49.7), reversing September's above-50 readings.[16][17]
5. **Four previously-pending earnings reports all beat and rose Friday**: Chevron (+1.75%), Exxon Mobil (+2.16%), AbbVie (+1.41%) and Newell Brands (+1.97%), helping Energy (XLE +1.91%) lead sector gainers as oil rose alongside (WTI +2.08%, Brent +2.40%) — even as 5 of 11 sectors still closed lower, Technology (XLK -4.89%) the clear laggard.[8][9][10][11][31]

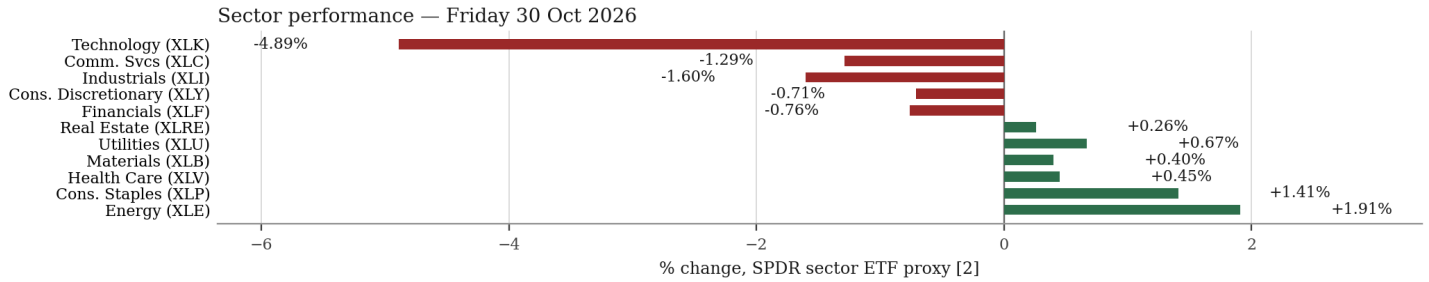

1. Market recap

S&P 500	Dow Jones	Nasdaq Comp.	Russell 2000	VIX	10Y Treasury
7,580.07	**51,770.31**	**25,437.00**	**2,811.84**	**19.42**	**4.94%**
-1.82%	-1.09%	-2.86%	-1.66%	+12.91%	-4bp

WTI crude	Gold
$104.12	**$3,898.90**
+2.08%	-3.29%

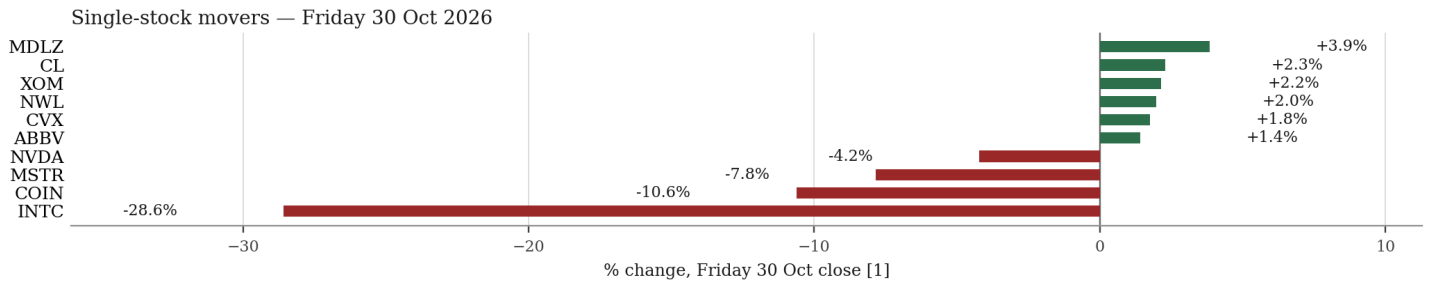

US equities sold off sharply Friday 30 October 2026, the only NYSE session inside this edition's window. The S&P 500 fell 1.82% to 7,580.07 (its worst session since June 2026), the Nasdaq Composite fell 2.86% to 25,437.00, the Dow fell 1.09% to 51,770.31 and the Russell 2000 fell 1.66% to 2,811.84, all against Thursday 29 October's base.[3] Neither AP's nor Reuters' own wire page was directly located for Friday; the figures above rest on an AP-wire mirror syndicated through an international outlet (lanacion.com.ar), cross-checked against two independent secondary sources (stockmarketwatch.com's Nightly Market Digest, thebusinessjournal.com) that matched exactly, plus SPY/DIA/QQQ/IWM ETF-proxy corroboration — a new variant of the standing AP/Reuters wire-gap workaround worth re-trying first at a future edition before the usual Yahoo/Investrade fallback.[3]

Sector performance

The selloff was concentrated, not uniform: 6 of 11 sectors closed higher. Technology (XLK -4.89%) was by far the session's worst performer, dragged down by Intel's historic plunge and Nvidia's decline (Section 2); Communication Services (-1.29%), Industrials (-1.60%), Consumer Discretionary (-0.71%) and Financials (-0.76%) also fell. Energy (XLE +1.91%) led gainers as oil rose alongside Friday's beat-and-raise energy earnings (Section 2); Consumer Staples (+1.41%), Health Care (+0.45%), Materials (+0.40%), Utilities (+0.67%) and Real Estate (+0.26%) all held up.[2]

2. Equities and earnings

Closing prices below per stockanalysis.com price-history pages[1].

Ticker	Move	Driver
INTC	-28.58%	Worst day since 1974. Q3 revenue and non-GAAP EPS beat, but Q4 profit guidance landed below Street on continued PC-market pressure.[4]
COIN	-10.62%	Q3 GAAP profit of approx. $719m beat, but approx. $715m of that was crypto mark-to-market gains; adjusted net income only approx. $78m and revenue fell 35% y/y; shares also hit by the Binance hack's crypto-market selloff.[5][6]
MSTR	-7.84%	Fell despite a stronger profit print; driver cited was the CFO's resignation (effective the following week, stated personal reasons) plus Bitcoin falling below $77,000 on the Binance hack.[5][7]
NVDA	-4.22%	AP named Nvidia the single largest index-point drag on the S&P 500, amid a broader AI-capex valuation selloff in megacap tech; no single-name catalyst identified.[3]
ABBV	+1.41%	One of four previously-pending reporters (see below). Q3 net revenue $17.40bn (+10.3% y/y); Skyrizi and Rinvoq immunology sales both grew >20%; raised FY2026 guidance.[10]
CVX	+1.75%	Q3 adjusted EPS $5.28 beat consensus approx. $4.88; downstream earnings more than quadrupled y/y to approx. $4.9bn on refining margins and record US refinery throughput.[8]
NWL	+1.97%	Q3 net sales +3.7% y/y; normalized diluted EPS $0.20 landed at the top of the company's own guidance range; raised FY2026 sales outlook.[11]
XOM	+2.16%	Q3 adjusted EPS $4.23 beat; operating cash flow $25.7bn, free cash flow $19.1bn.[9]
CL	+2.29%	Q3 beat on gross/operating profit, margin, net income, EPS and free cash flow, all up y/y on higher pricing.[13]
MDLZ	+3.85%	Q3 adjusted EPS $0.78 vs. approx. $0.71 consensus; management reiterated confidence in 2027 EPS growth.[12]

Chevron, Exxon Mobil, AbbVie and Newell Brands — all four confirmed still pending as of edition 53's Thursday cutoff — each reported before Friday's open and each beat and rose, confirmed directly against their own SEC 8-K Exhibit 99.1 filings.[8][9][10][11] AstraZeneca, Regeneron, Dominion, Exelon and Cameco also reported before Friday's open per a dated earnings calendar, but a verified closing-price reaction could not be found for any of the five — flagged in Annex B rather than omitted.

New Mexico v. Meta: Meta's formal notice of appeal of the $25bn civil-penalty ruling remains unconfirmed for an eighth straight edition; no new development found in the separate 48-state $18bn settlement or the earlier Unfair Practices Act stay.[14] **Equifax** rose a further 2.90% Friday with no dated catalyst found; a "Credit Abuse Risk" product-launch lead was checked and found to be dated 30 January 2026, not 30 October — a false lead, not a driver.[15]

3. Macro, policy and rates

Central bank	Policy rate	Last change	Next decision
Federal Reserve	3.75%–4.00%	Hold, 28 Oct 2026 (10-2, Cook & Hammack dissented for a hike)	8–9 Dec 2026
Bank of Japan	approx. 1.25%	Hold, 30 Oct 2026 (8-1, Takata dissented for a hike to 1.5%)	Not confirmed this edition
Bank of England	3.75%	Hold, 17 Sept 2026 (6-3)	5 Nov 2026
European Central Bank	2.50% (depo)	Hold, eff. 16 Sept 2026 (unchanged through 28–29 Oct)	Not confirmed this edition
Bank of Canada	2.50%	Hike +25bp, 28 Oct 2026	9 Dec 2026
Reserve Bank of Australia	4.60%	Hike +25bp, 29 Sept 2026	3 Nov 2026
Swiss National Bank	0.00%	Hold, 24 Sept 2026	Not confirmed this edition
Norges Bank	4.50%	Hike +25bp, 24 Sept 2026	17 Dec 2026
Riksbank	1.75%	Hold, eff. 30 Sept 2026	Decision published 4 Nov 2026 (meets 3 Nov)
Banxico	6.50%	Hold (unanimous; easing cycle closed May 2026)	Not confirmed this edition

The **Bank of Japan** held its policy rate at approx. 1.25% at its 29–30 October meeting, confirmed directly against the Bank's own statement PDF — an 8-1 vote, with Takata Hajime (not September's dissenters Asada and Sato, who voted for hold this time) dissenting for a hike to approx. 1.5%, arguing underlying inflation had reached target. The statement posted at 12:02 JST Friday (approx. 11:02pm ET Thursday), separately raising the pace of ETF sales to approx. ¥860bn/year from January 2027.[16] **China's October PMI** fell back below 50 on both gauges — manufacturing 49.3 (from September's 50.1) and non-manufacturing 49.7 (from 50.2) — a notable reversal; the manufacturing figure rests on Reuters-sourced wire coverage (stats.gov.cn's own English PMI release had not posted as of this fetch, and the Chinese-language article itself 403'd), the non-manufacturing figure on Xinhua's English wire directly.[17] This edition's **monthly settled-facts audit** (the first of November) re-confirmed every bank above directly against its own primary source with no contradictions, except Riksbank's rate level (riksbank.se's own rate page 404'd; only the Nov decision date is primary-confirmed) and Banxico (banxico.org.mx unreachable; rate confirmed only via consistent secondary reporting).[18][19][20][21][22][23][24][25][26][27][28] Separately, the **US government-funding URL reconfirmed cleanly this edition** after failing to at edition 53: H.R. 6500 funds federal agencies through 11 December 2026, no shutdown in effect.[29] No new Federal Register filing was found on the US-China tariff framework; a reported extension of the Busan truce to 10 January 2027 remains formally unconfirmed via any published Federal Register notice.[30]

4. Commodities and FX

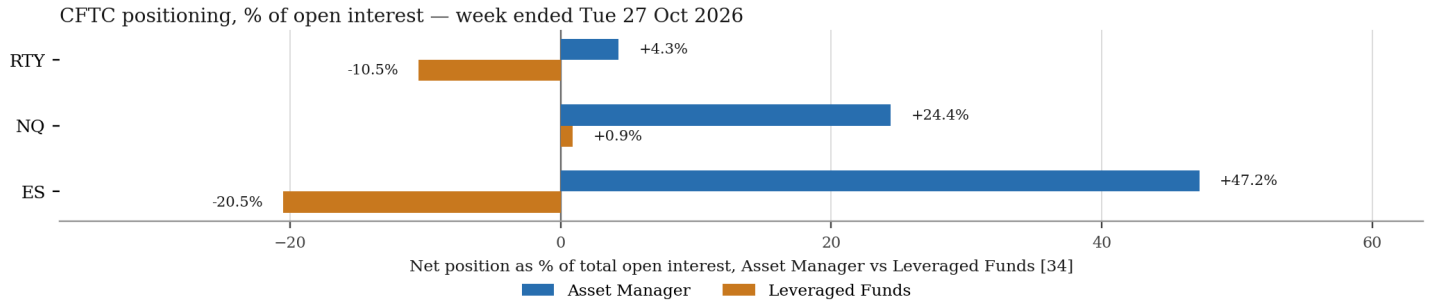

Instrument	Level	Chg	Note
WTI crude	$104.12	+2.08%	Single-sourced to Investing.com this edition[31]
Brent crude	$117.64	+2.40%	Single-sourced to Investing.com this edition[31]
Henry Hub nat. gas	$2.898	-1.83%	NGZ6 contract; provisional, see prose[32]
Gold	$3,898.90	-3.29%	Broke below $4,000; see vendor-revision note[33]
Silver	$49.276	-5.93%	See vendor-revision note[33]
Copper (LME cash)	$14,449.00/t	-0.76%	Thu base from edition 53's own log (see Annex A)[35]
Copper (COMEX x-chk)	$6.4820/lb	-1.83%	Investing.com, directional cross-check only[35]
DXY	101.745	-0.14%	Dec'26 futures proxy, not true ICE spot[36]

EUR/USD	1.1160	-0.18%	[37]
GBP/USD	1.3392	+0.10%	[37]
USD/JPY	157.55	-0.10%	Agrees directionally with DXY[37]
2-year Treasury	4.56%	-5bp	[38]
10-year Treasury	4.94%	-4bp	[38]
30-year Treasury	5.31%	-1bp	[38]

The dollar eased broadly: DXY's futures proxy, UUP and USD/JPY all point the same direction (softer dollar) for a fifth straight session logged. True ICE-spot DXY remained unobtainable this edition (ice.com 404'd, marketwatch.com unreachable) — now a third straight edition with no working spot-index route.[36] **Gold and silver's vendor-revision trap continued for a fourth consecutive edition:** this edition's freshly re-fetched Thursday 29 October base (gold $4,031.40, silver $52.380) does not match edition 53's own directly-confirmed Thursday figures (gold $4,019.65, silver $51.980) — an $11.75 and $0.40 discrepancy respectively on the identical calendar date from the same vendor. Friday's close (used above) is computed against this edition's own freshly re-fetched base, per the standing recommendation, with the discrepancy disclosed rather than silently resolved.[33] **Henry Hub remains this report's worst-performing series**: a genuinely independent source was attempted again (CME settlement page timed out twice, Barchart returned empty, EIA's daily spot series had not yet posted Thu/Fri) and none succeeded — this edition's figures are single-sourced to Investing.com and should be treated as provisional.[32] Treasury yields fell modestly across the curve on apparent risk-off positioning.[38]

5. Derivatives, volatility and positioning

The **VIX complex** jumped across every tenor Friday: VIX +12.91% to 19.42, VIX9D +21.30% to 19.25, VIX3M +7.28% to 20.78, VIX6M +4.52% to 22.20, VVIX +8.59% to 106.43, SKEW -0.84% to 149.76 — all six series freshly timestamped Friday close, cross-validated against CBOE's historical endpoint. Both of the feed's known bugs (a duplicated prior-close field, and a percent-change field that divides by the wrong price) were present on every series this edition, not intermittently as in several recent editions; all changes above were computed manually from raw prior-close and current-price fields rather than trusted from the feed's own percent column. Term structure held clean contango throughout (VIX9D < VIX < VIX3M < VIX6M) despite the spike — a large repricing, not (on this evidence) a structural stress signal.[39]

The CFTC's weekly Commitments of Traders report, due Friday 30 October and covering **Tuesday 27 October** data (a three-session lag relative to Friday's own selloff), posted on schedule. Asset managers remain net long across all three index-futures contracts, most heavily in ES (+47.2% of open interest) and NQ (+24.4%); leveraged funds are net short ES (-20.5% of OI) and RTY (-10.5%) but roughly flat on NQ (+0.9%). Week-over-week, leveraged funds added to ES shorts (-29,359 contracts) while trimming RTY shorts and nudging NQ longer — a mixed, index-specific positioning shift heading into Friday's selloff, not a uniform de-risking.[34]

December 2026 FOMC rate-path odds were little changed from edition 53: DeFi Rate's blended aggregator shows a 25bp hike at approx. 70% (vs. approx. 71% at edition 53), hold approx. 28%, cut near zero, cross-validated against a direct Polymarket Gamma-API pull (69.5%/27.5%). The aggregator's decision-table (70.5% hike) and separate rate-level contract (72.5%) remained internally inconsistent for an eighth straight edition — both figures disclosed rather than one picked. CME FedWatch (14th straight failure) and Kalshi direct (18th straight failure) both remained blocked.[40] SOFR printed 3.94% and EFFR 3.88% for Thursday 29 October (Friday not yet posted at cutoff, normal one-day lag).[41] Options flow and dealer gamma remained low-yield: zerogex.io and SpotGamma are unusable for a 15th and 9th consecutive edition respectively, and no notable skew/flow commentary was found tied to Friday's session or Thursday's megacap movers.[42]

6. The day ahead

Date	Event	Consensus / context
Mon 2 Nov	US ISM Manufacturing PMI (10:00am ET)	First business day of month; consensus not independently confirmed this edition
Mon 2 Nov	Apple fiscal Q4 2026 earnings (shifted date)	Per secondary calendar sourcing only; not confirmed against Apple's own IR calendar[43]
Tue 3 Nov	RBA decision, 2:30pm AEDT (approx. 11:30pm ET Mon)	Current rate 4.60%; outcome not yet known
Tue 3 Nov	Riksbank policy meeting (decision published Wed 4 Nov)	Current rate 1.75%; outcome not yet known
Tue 3 Nov	US JOLTS (tentative)	Date not independently confirmed against bls.gov this edition[44]
Thu 5 Nov	Bank of England MPC decision + Monetary Policy Report	Current rate 3.75% (6-3 hold, 17 Sept); outcome not yet known
Fri 6 Nov	US nonfarm payrolls (tentative, first-Friday pattern)	Date inferred, not independently confirmed against bls.gov this edition[44]

Sector setup we take into the next session

- Technology enters the next session as the session's clear laggard (XLK -4.89%) after Intel's historic plunge and Nvidia's drag — watch whether Friday's AI-capex valuation jitters extend or whether megacap names stabilize.
- Energy (XLE +1.91%) led Friday on a clean beat-and-raise cluster (Chevron, Exxon Mobil) plus a firmer oil tape; both WTI and Brent rose over 2% the same session.
- Crypto-adjacent names (Coinbase, Strategy) remain exposed to the Binance-hack fallout and Bitcoin's break below $77,000 — a genuinely new, still-developing thread to watch into next week.

- VIX's sharp but contango-preserving jump (+12.91%) suggests options markets are pricing a discrete event rather than a regime shift; watch whether the term structure inverts if the tech selloff extends.

Annex A — Assumptions, corrections and status

- No correction box this edition — nothing published in a prior edition was found to be wrong.
- Gold/silver vendor-revision trap: now a fourth consecutive edition of the identical Thursday-date print re-fetching to a different value from Investing.com (see Section 4). Continue fresh-refetch-every-edition discipline.
- Henry Hub: single-sourced to Investing.com again this edition after CME, Barchart and EIA-daily all failed or lagged; treat as provisional.
- LME copper: Friday 30 Oct ($14,449.00 cash) freshly fetched directly from westmetall.com; Thursday 29 Oct base ($14,560.00) could not be re-fetched this edition (the live page exposed only the current day's row) and was instead carried forward from edition 53's own directly-confirmed figure — a legitimate, disclosed use of the prior-edition-as-source pattern, not a fresh fetch.
- DXY: true ICE-spot sourcing failed for a third straight edition (ice.com 404, marketwatch.com unreachable); futures-proxy + UUP + USD/JPY cross-check used instead, all three agreeing directionally.
- CBOE VIX feed: both known bugs (duplicated prior-close, mis-denominated percent-change) appeared on all six series this edition, not intermittently; all changes reported were computed manually.
- AP/Reuters wire gap: neither wire's own page was directly located for Friday 30 Oct; a new workaround (an AP-wire mirror syndicated through lanacion.com.ar) cross-checked cleanly against two independent secondary sources and ETF proxies — worth trying again before the usual Yahoo/Investrade fallback.
- Monthly settled-facts audit (first edition of November) completed: all ten central-bank rows in Section 3 reconfirmed directly, except Riksbank's rate value (page 404'd, only the decision date is primary-sourced) and Banxico (site unreachable, secondary-sourced only) — both already flagged as such in the table.
- BoJ's and ECB's exact next-decision dates could not be confirmed this edition (BoJ's dedicated calendar page not reached in this research pass; the ECB's own next-meeting date has not yet been published) — both marked unavailable in the Section 3 table rather than estimated from typical cadence.
- SNB's and Banxico's next-decision dates likewise unconfirmed this edition — marked unavailable.
- China's October manufacturing PMI (49.3) rests on Reuters-sourced wire coverage, not a direct stats.gov.cn fetch (the Chinese-language article 403'd; the English release had not yet posted); the non-manufacturing figure (49.7) is sourced directly to Xinhua's English wire.
- Binance-hack attribution to North Korea's "TraderTraitor" group is sourced to blockchain-analytics firms (TRM, Chainalysis per wire coverage), not an official government attribution — reported as attributed, not established.
- US-China Busan truce's reported extension to 10 January 2027 remains unconfirmed via any published Federal Register notice as of this edition.

Annex B — Data points sought but not verified this edition

- Bank of Japan's next policy-decision date.
- ECB's next policy-meeting date.
- Swiss National Bank's next assessment date.
- Banxico's next policy-decision date and the exact origin date of its current 6.50% level.
- Riksbank's current 1.75% rate value via a direct riksbank.se fetch (page 404'd this edition; only the Nov decision-publication date is primary-confirmed).
- AstraZeneca, Regeneron, Dominion, Exelon and Cameco's Friday 30 Oct closing-price reactions to their earnings (reporting dates confirmed, reactions not found).
- A second independent source for WTI and Brent crude this edition (single-sourced to Investing.com).
- A genuinely independent primary source for Henry Hub natural gas (CME timed out, Barchart returned empty, EIA daily spot had not yet posted Thu/Fri).
- A second same-day re-fetch of gold/silver to test for an intra-edition revision (only one fetch was performed this edition).
- Meta's formal notice of appeal in New Mexico v. Meta (unconfirmed for an eighth straight edition).
- Exact consensus figures for US JOLTS and nonfarm payrolls' release dates in the day-ahead window (both inferred from typical patterns, not confirmed against bls.gov).
- Apple's fiscal Q4 2026 earnings date against its own IR calendar (sourced only to MacRumors/9to5Mac secondary calendars).

Annex C — Sources

- [1] Single-stock closes, Friday 30 Oct 2026 — stockanalysis.com price-history pages (INTC, COIN, MSTR, NVDA, ABBV, CVX, NWL, XOM, CL, MDLZ).
- [2] SPDR sector-ETF performance, Friday 30 Oct 2026 — stockanalysis.com ETF price-history pages, all 11 sector ETFs.
- [3] S&P 500/Dow/Nasdaq Composite/Russell 2000 closes, Friday 30 Oct 2026 — AP wire via lanacion.com.ar syndication, cross-checked against stockmarketwatch.com and thebusinessjournal.com; SPY/DIA/QQQ/IWM ETF-proxy corroboration via stockanalysis.com.
